

Guidely IBPS PO Mock 2, August 14, 2026

English Language

Q. 1

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

According to the passage, jet streams are formed due to:

- A) The rotation of the Earth in the Southern Hemisphere. 
- B) Large temperature differences between adjacent air masses. 
- C) The descent of dry air at 30° latitude. 
- D) The moisture content found in tropical rainforests. 
- E) The lack of solar radiation at the polar regions. 

Answer: B

The passage clearly states that jet streams “result from the contact between air masses of vastly different temperatures.” This directly points to temperature differences as the cause.

The other options refer to unrelated concepts:**Explanation:**

(a) Coriolis effect (wind deflection, not jet stream formation)

(c) Horse latitudes (descending dry air)

(d) Equatorial rainfall

(e) Polar radiation deficit

So, option (b) is the precise match.

Q. 2

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

The passage suggests that if the Earth did not rotate:

- A) The Coriolis effect would be significantly stronger. 
- B) Solar radiation would no longer be unevenly distributed. 
- C) Winds might move in a more direct north-south fashion. 
- D) The jet streams would move at much higher velocities. 
- E) High-pressure zones would only exist at the equator. 

Answer: C

The passage states that the Coriolis effect is caused by Earth's rotation and it deflects winds away from a straight north-south path (to the right in Northern Hemisphere and left in Southern Hemisphere).

So, if the Earth did not rotate, the Coriolis effect would not exist, meaning winds would likely move straight north-south without deflection.

Explanation:**Why others are incorrect:**

- (a) Coriolis effect would disappear, not become stronger
- (b) Uneven solar heating would still exist (due to angle of sunlight, not rotation)
- (d) Jet stream speed is unrelated to rotation removal in the passage
- (e) High-pressure zones are not limited to the equator

Q. 3

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

In the Northern Hemisphere, how does the Coriolis effect alter wind direction?

A) It causes air masses to move in a perfectly vertical trajectory.

B) It deflects moving air toward the left of its path.

C) It accelerates the wind speed without changing its direction.

D) It pulls air masses toward the center of the Earth.

E) It causes a clockwise or rightward deflection of movement.

Answer: E

The passage clearly states:

In the Northern Hemisphere, the Coriolis effect causes winds to veer to the right of their path.

This rightward deflection corresponds to a clockwise turning tendency in movement patterns.

Explanation:**Why others are incorrect:**

- (a) No mention of vertical motion
- (b) Leftward deflection is for the Southern Hemisphere
- (c) Coriolis effect changes direction, not speed
- (d) No vertical pull toward Earth's center is involved

Therefore, option (e) is correct.

Q. 4

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

The "horse latitudes" mentioned in the second paragraph are primarily associated with:

- A) Rising warm air and frequent thunderstorm activity. 
- B) Low-pressure zones located precisely at the equator. 
- C) High-pressure systems resulting in dry, arid conditions. 
- D) The convergence of the Hadley and Polar circulation cells. 
- E) Rapidly moving conduits of air near the tropopause. 

Answer: C

The passage clearly states that air rising at the equator moves aloft, cools, and then descends around 30° latitude, creating high-pressure arid regions known as the horse latitudes. High pressure is associated with sinking air and dry conditions.

Why others are incorrect:**Explanation:**

- (a) Rising warm air and thunderstorms occur at the equator, not horse latitudes
- (b) Equator is a low-pressure zone, not horse latitudes
- (d) Horse latitudes are linked to Hadley cell descending branch, not polar convergence
- (e) Jet streams are upper-level winds, unrelated to horse latitudes

Therefore, option (c) is correct.

Q. 5

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

According to the passage, what is the root cause of atmospheric heat redistribution?

- A) The gravitational pull of the moon on Earth's oceans. 
- B) The variation in the angle at which solar rays hit the surface. 
- C) The high-velocity movement of the polar jet streams. 
- D) The transition of air masses from the tropopause to the crust. 
- E) The cooling effect of precipitation in the tropical regions. 

Answer: B

The passage begins by stating that Earth's weather patterns are driven by the uneven heating of the planet due to solar radiation. It specifically explains that the Sun's rays hit the equator directly and the poles at an oblique angle, creating a thermal imbalance. This imbalance is what triggers atmospheric circulation and heat redistribution.

Explanation:**Why others are incorrect:**

- (a) Moon's gravity is not mentioned as a factor
- (c) Jet streams influence weather but are not the root cause
- (d) Air does not transition to the crust
- (e) Precipitation is a result, not the cause

Therefore, option (b) is correct.

Q. 6

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

The term "oblique" in the paragraph most nearly means:

- A) Perpendicular 
- B) Fragile 
- C) Intense 
- D) Slanting 
- E) Constant 

Explanation:

Answer: D

In the passage, "the sun's rays hit the poles at an oblique angle." Here, oblique refers to something that is not straight or perpendicular, but tilted or slanted.

Why others are incorrect:

- (a) Perpendicular = opposite of oblique
 - (b) Fragile = unrelated meaning
 - (c) Intense = refers to strength, not angle
 - (e) Constant = refers to steadiness, not direction
- Therefore, option (d) Slanting is correct.

Q. 7

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

What is the function of the second paragraph in the context of the entire passage?

- A) To criticize the current model of atmospheric circulation. 
- B) To explain the role of Earth's rotation in wind deflection. 
- C) To describe the specific structures that organize global air flow. 
- D) To provide a history of meteorological discoveries in the tropics. 
- E) To list the various types of precipitation found in different cells. 

Answer: C

The second paragraph explains the primary circulation cells—Hadley, Ferrel, and Polar—and how they structure global atmospheric movement, including pressure zones, rising and sinking air, and resulting climate patterns (like rainforests and deserts).

Why others are incorrect:**Explanation:**

- (a) No criticism is made
- (b) Coriolis effect is mentioned, but not the main focus of the paragraph
- (d) No historical discussion is included
- (e) Precipitation is mentioned only as a result, not listed or categorized

Therefore, option (c) best captures the function of the paragraph.

Q. 8

Read the following passage and answer the given questions. Certain words are highlighted to answer some of the questions.

The fundamental driver of Earth's weather patterns is the uneven heating of the planet's surface by solar radiation. Because the sun's rays strike the equator directly while hitting the poles at an **oblique** angle, a significant thermal gradient is established between different latitudes. This temperature imbalance initiates the movement of air masses, as the atmosphere constantly attempts to redistribute heat from the tropics toward the polar regions.

The primary circulation cells—Hadley, Ferrel, and Polar—dictate the prevailing wind directions and pressure belts across the globe. Near the equator, warm air rises and creates a low-pressure zone characterized by heavy precipitation and tropical rainforests. As this air moves aloft and cools, it eventually descends at approximately 30° latitude, creating high-pressure arid regions known as the **horse latitudes**.

The Coriolis effect, a consequence of Earth's rotation, significantly deflects these moving air masses, preventing them from traveling in a straight north-south line. In the Northern Hemisphere, this force causes winds to veer to the right, while in the Southern Hemisphere, they deflect to the left. This deflection is responsible for the formation of the trade winds and the mid-latitude westerlies that define maritime navigation routes.

Upper-level atmospheric currents, known as jet streams, act as high-velocity conduits that further influence surface weather systems. These narrow bands of strong wind are located near the tropopause and result from the contact between air masses of vastly different temperatures. Fluctuations in the position and intensity of these jet streams can lead to prolonged weather **anomalies**, such as heatwaves or severe winter storms.

Based on the passage, the Coriolis effect is a direct result of:

- A) Thermal gradients between the tropics and the poles. 
- B) The uneven distribution of landmasses and oceans. 
- C) The friction between the atmosphere and the Earth's crust. 
- D) The rotation of the Earth on its axis. 
- E) The cooling of air as it reaches higher altitudes. 

Explanation:

Answer: D

The passage explicitly states that the Coriolis effect is a consequence of Earth's rotation, which causes moving air masses to be deflected (right in the Northern Hemisphere and left in the Southern Hemisphere).

Why others are incorrect:

- (a) Thermal gradients drive circulation, not the Coriolis effect
- (b) Landmass distribution is not mentioned as a cause
- (c) Friction is not discussed in the passage
- (e) Cooling at altitude relates to circulation, not Coriolis effect

Q. 9

Rearrange the following five sentences (A), (B), (C), (D), and (E) in the proper sequence to form a meaningful paragraph; then answer the questions given below them.

A. By utilizing a centralized platform for these reports, team leads can identify recurring patterns of errors that might otherwise go unnoticed in isolated instances.

B. To address these inconsistencies, a structured feedback system was proposed to streamline the reporting of technical discrepancies.

C. However, the lack of a uniform method for documenting these errors often led to miscommunication between the verification team and the developers.

D. Finally, this data-driven approach ensures that the final output meets the highest standards of accuracy and reliability for the end-user.

E. In any high-stakes production environment, the initial phase involves a rigorous verification process to catch minor flaws before they escalate.

Which of the following would be the penultimate sentence?

A) B 

B) D 

C) A 

D) E 

E) C 

Explanation:

The correct sequence is:

E → C → B → A → D

E introduces the general context: a high-stakes production environment and the importance of verification.

C presents the problem: lack of a uniform error-reporting method causing miscommunication.

B logically follows with a solution: proposing a structured feedback system to fix the issue.

A explains how this solution works in practice: centralized reporting helps identify recurring patterns.

D concludes with the outcome: improved accuracy and reliability due to this data-driven approach.

Answer: C

“Penultimate” means second last sentence. So the second last sentence in the sequence is A.

Q. 10

Rearrange the following five sentences (A), (B), (C), (D), and (E) in the proper sequence to form a meaningful paragraph; then answer the questions given below them.

A. By utilizing a centralized platform for these reports, team leads can identify recurring patterns of errors that might otherwise go unnoticed in isolated instances.

B. To address these inconsistencies, a structured feedback system was proposed to streamline the reporting of technical discrepancies.

C. However, the lack of a uniform method for documenting these errors often led to miscommunication between the verification team and the developers.

D. Finally, this data-driven approach ensures that the final output meets the highest standards of accuracy and reliability for the end-user.

E. In any high-stakes production environment, the initial phase involves a rigorous verification process to catch minor flaws before they escalate.

Which of the following would be the Introductory sentence?

A) B 

B) E 

C) A 

D) C 

E) D 

Explanation:

The correct sequence is:

E → C → B → A → D

E introduces the general context: a high-stakes production environment and the importance of verification.

C presents the problem: lack of a uniform error-reporting method causing miscommunication.

B logically follows with a solution: proposing a structured feedback system to fix the issue.

A explains how this solution works in practice: centralized reporting helps identify recurring patterns.

D concludes with the outcome: improved accuracy and reliability due to this data-driven approach.

Answer: B

The introductory sentence is the first sentence in the sequence. So, it is E.

Q. 11

Rearrange the following five sentences (A), (B), (C), (D), and (E) in the proper sequence to form a meaningful paragraph; then answer the questions given below them.

A. By utilizing a centralized platform for these reports, team leads can identify recurring patterns of errors that might otherwise go unnoticed in isolated instances.

B. To address these inconsistencies, a structured feedback system was proposed to streamline the reporting of technical discrepancies.

C. However, the lack of a uniform method for documenting these errors often led to miscommunication between the verification team and the developers.

D. Finally, this data-driven approach ensures that the final output meets the highest standards of accuracy and reliability for the end-user.

E. In any high-stakes production environment, the initial phase involves a rigorous verification process to catch minor flaws before they escalate.

Which of the following combinations is the combination of two consecutive statements after the correct rearrangement?

A) AC 

B) DE 

C) CB 

D) AE 

E) BE 

Explanation:

The correct sequence is:

E → C → B → A → D

E introduces the general context: a high-stakes production environment and the importance of verification.

C presents the problem: lack of a uniform error-reporting method causing miscommunication.

B logically follows with a solution: proposing a structured feedback system to fix the issue.

A explains how this solution works in practice: centralized reporting helps identify recurring patterns.

D concludes with the outcome: improved accuracy and reliability due to this data-driven approach.

Answer: C

From the options given, the only matching consecutive pair is: c) CB

Q. 12

Rearrange the following five sentences (A), (B), (C), (D), and (E) in the proper sequence to form a meaningful paragraph; then answer the questions given below them.

A. By utilizing a centralized platform for these reports, team leads can identify recurring patterns of errors that might otherwise go unnoticed in isolated instances.

B. To address these inconsistencies, a structured feedback system was proposed to streamline the reporting of technical discrepancies.

C. However, the lack of a uniform method for documenting these errors often led to miscommunication between the verification team and the developers.

D. Finally, this data-driven approach ensures that the final output meets the highest standards of accuracy and reliability for the end-user.

E. In any high-stakes production environment, the initial phase involves a rigorous verification process to catch minor flaws before they escalate.

Which of the following would be the anti-penultimate sentence?

A) C 

B) A 

C) E 

D) D 

E) B 

The correct sequence is:

E → C → B → A → D

E introduces the general context: a high-stakes production environment and the importance of verification.

C presents the problem: lack of a uniform error-reporting method causing miscommunication.

B logically follows with a solution: proposing a structured feedback system to fix the issue.

A explains how this solution works in practice: centralized reporting helps identify recurring patterns.

D concludes with the outcome: improved accuracy and reliability due to this data-driven approach.

Explanation:

Answer: E

“Anti-penultimate” means the third sentence from the end.

So, counting from the end:

Last (5th): D

Second last (4th): A

Third last (3rd): B

Q. 13

Rearrange the following five sentences (A), (B), (C), (D), and (E) in the proper sequence to form a meaningful paragraph; then answer the questions given below them.

A. By utilizing a centralized platform for these reports, team leads can identify recurring patterns of errors that might otherwise go unnoticed in isolated instances.

B. To address these inconsistencies, a structured feedback system was proposed to streamline the reporting of technical discrepancies.

C. However, the lack of a uniform method for documenting these errors often led to miscommunication between the verification team and the developers.

D. Finally, this data-driven approach ensures that the final output meets the highest standards of accuracy and reliability for the end-user.

E. In any high-stakes production environment, the initial phase involves a rigorous verification process to catch minor flaws before they escalate.

Which of the following would be the hindmost sentence?

A) D 

B) C 

C) E 

D) A 

E) B 

Explanation:

The correct sequence is:

E → C → B → A → D

E introduces the general context: a high-stakes production environment and the importance of verification.

C presents the problem: lack of a uniform error-reporting method causing miscommunication.

B logically follows with a solution: proposing a structured feedback system to fix the issue.

A explains how this solution works in practice: centralized reporting helps identify recurring patterns.

D concludes with the outcome: improved accuracy and reliability due to this data-driven approach.

Answer: A

"Hindmost sentence" means the last sentence in the sequence. So, the last sentence is D.

Q. 14	In the question below four words are given in bold. These four words may not be in their correct position. The sentence is then followed by options with the correct combination of words that should replace each other in order to make the sentence grammatically and contextually correct. Find the correct combination of the words that replace each other. The (A) construction of the Great Wall of China (B) served several dynasties and (C) spanned as a formidable defensive (D) fortification against northern invasions. A) Only A-D ❌ B) Both A-B & C-D ❌ C) Only B-C ✅ D) Both A-C & B-D ❌ E) No interchange required ❌
Explanation:	Answer: C The correct answer is (c) Only B-C because the verbs are currently misplaced. While construction spanned (extended over) several dynasties, the wall served as a defensive fortification; swapping them restores the logical relationship between time and function. Correct sentence: The construction of the Great Wall of China spanned several dynasties and served as a formidable defensive fortification against northern invasions.

Q. 15

In the question below four words are given in bold. These four words may not be in their correct position. The sentence is then followed by options with the correct combination of words that should replace each other in order to make the sentence grammatically and contextually correct. Find the correct combination of the words that replace each other.

Modern sustainable buildings often (A) consumption vertical gardens and (B) overall solar panels to reduce their (C) advanced carbon footprint and energy (D) incorporate levels.

A) Both A-D & B-C

B) Both A-C & B-D

C) Only A-B

D) Only B-D

E) No interchange required

**Explanation:****Answer: A**

By swapping these pairs, the verbs and adjectives align with their appropriate nouns to create a logical sentence:

A-D Swap: Buildings incorporate (include) features, while consumption levels refers to the amount of energy used.

B-C Swap: Advanced solar panels describes the technology, while overall carbon footprint refers to the total environmental impact.

Correct sentence: Modern sustainable buildings often **incorporate** vertical gardens and **advanced** solar panels to reduce their **overall** carbon footprint and energy **consumption** levels.

Q. 16

In the question below four words are given in bold. These four words may not be in their correct position. The sentence is then followed by options with the correct combination of words that should replace each other in order to make the sentence grammatically and contextually correct. Find the correct combination of the words that replace each other.

Orchestral conductors must (A) symphonic an intimate understanding of every (B) instrument to guide dozens of (C) talented musicians through a cohesive (D) possess performance.

A) Both A-B & C-D

B) Only B-C

C) Only A-D

D) Both A-C & B-D

E) No interchange required

Explanation:

Answer: C

The sentence incorrectly places the adjective "symphonic" after the modal verb "must," where a base-form verb is required. It also places the verb "possess" as a modifier for "performance."

Swap A and D

Correct sentence: Orchestral conductors must **possess** an intimate understanding of every instrument to guide dozens of talented musicians through a cohesive **symphonic** performance.

Q. 17

In the question below four words are given in bold. These four words may not be in their correct position. The sentence is then followed by options with the correct combination of words that should replace each other in order to make the sentence grammatically and contextually correct. Find the correct combination of the words that replace each other.

By (A) lending out a portion of their deposits, banks create credit, which fuels (B) entrepreneurship, (C) infrastructure development, and personal (D) consumption.

A) Both A-C & B-D 

B) Only B-C 

C) Both A-B & C-D 

D) Both A-D & B-C 

E) No interchange required 

Explanation:

Answer: E

The sentence is logically and grammatically sound as written. Here is the breakdown of why each word is in its correct place:

(A) **Lending** out: This is the primary function of a bank to generate credit—using customer deposits to provide loans.

(B) **Entrepreneurship**: Credit allows individuals to start or expand businesses.

(C) **Infrastructure** development: Governments and corporations use credit for large-scale building projects.

(D) **Consumption**: Credit (like credit cards or personal loans) enables individuals to purchase goods and services.

Q. 18

Two columns are given in each question and each column has parts of a sentence. Choose the most suitable pair, which makes a grammatically correct and contextually coherent statement.

Column I	Column II
A. Although the initial projections were modest,	D. the final year-end profits exceeded all expectations
B. The committee approved the proposal	E. the central bank may increase the interest rates.
C. Since the inflation rate is rising,	F. because it aligned perfectly with the long-term strategy.

A) Only A-F B) Only B-E C) Both B-D & C-F D) A-D, B-F & C-E E) None of these **Explanation:****Answer: D**

A-D: Although the initial projections were modest, the final year-end profits exceeded all expectations.

B-F: The committee approved the proposal because it aligned perfectly with the long-term strategy.

C-E: Since the inflation rate is rising, the central bank may increase the interest rates.

Q. 19

Two columns are given in each question and each column has parts of a sentence. Choose the most suitable pair, which makes a grammatically correct and contextually coherent statement.

Column I	Column II
A. While digital transactions are increasing,	D. and improve the standard of living.
B. The scheme aims at providing affordable housing	E. with environment conservation efforts.
C. We must balance the need for rapid industrial growth	F. many rural areas still rely heavily on physical currency.

A) Only C-D

B) Only A-F

C) Both B-D & C-E

D) A-F, B-E & C-D

E) None of these

**Explanation:****Answer: B**

A–F is grammatically correct and shows a proper contrast between digital transactions and rural cash usage.

While digital transactions are increasing, many rural areas still rely heavily on physical currency.

B–D is incorrect because “and improve” is not parallel with “aims at providing”; it should be “and improving.”

C–E is also incorrect because “environment conservation” is wrong usage; it should be “environmental conservation.”

Q. 20

Two columns are given in each question and each column has parts of a sentence. Choose the most suitable pair, which makes a grammatically correct and contextually coherent statement.

Column I	Column II
A. The technical team repaired the server,	D. the agricultural sector will see immense growth.
B. The merger was finalized yesterday,	E. so the online banking system is now operational.
C. If the monsoon is favorable this year,	F. but the integration process will be took several more months.

A) Both A-E & C-D B) A-D, B-E & C-F C) Both B-D & C-F D) A-D, B-F & C-E E) None of these **Explanation:****Answer: A**

A–E is correct because repairing the server logically leads to the online banking system becoming operational.

The technical team repaired the server, so the online banking system is now operational.

C–D is also correct as it forms a proper conditional sentence linking monsoon with agricultural growth.

If the monsoon is favorable this year, the agricultural sector will see immense growth.

B–F is incorrect due to the grammatical error in F (“will be took” should be “will take”).

Q. 21	In the following question, a sentence with a blank is given. Choose the most appropriate word to fill the given blank to make the sentence grammatically correct and meaningful. The old bridge was so _____ that the local government decided to close it for safety reasons. A) resilient  B) sturdy  C) precarious  D) modern  E) renovate 
Explanation:	Answer: C The sentence describes a bridge that had to be closed for safety reasons, so the blank should indicate that it was unsafe or unstable. resilient = strong and able to recover (opposite meaning) sturdy = strong (not unsafe) precarious = unstable and dangerous modern = unrelated to safety renovate = verb, not suitable grammatically So the correct word is "precarious".

Q. 22	In the following question, a sentence with a blank is given. Choose the most appropriate word to fill the given blank to make the sentence grammatically correct and meaningful. She is known for her _____ nature, always willing to help those in need without expecting anything in return. A) malevolent  B) altruistic  C) selfish  D) greedy  E) hostility 
Explanation:	Answer: B The sentence describes someone who helps others without expecting anything in return, which indicates a selfless and caring attitude. malevolent = harmful or evil altruistic = selfless and helpful selfish = self-centered greedy = wanting more for oneself hostility = aggression or anger So the most suitable word is "altruistic."

Q. 23	In the following question, a sentence with a blank is given. Choose the most appropriate word to fill the given blank to make the sentence grammatically correct and meaningful. The negotiator maintained a _____ expression, making it impossible for the other side to guess his next move. A) stoic ✓ B) vibrant ✗ C) emotional ✗ D) talkative ✗ E) sadly ✗
Explanation:	Answer: A The sentence suggests the negotiator revealed no emotions, making his intentions hard to read. stoic = calm and unemotional vibrant = lively emotional = expressive talkative = speaks a lot sadly = adverb, not suitable So the correct word is "stoic."

Q. 24	In the following question, a sentence with a blank is given. Choose the most appropriate word to fill the given blank to make the sentence grammatically correct and meaningful. After hours of debate, the committee finally reached a/an _____ decision that satisfied everyone involved. A) divisive  B) unanimous  C) vague  D) contested  E) differ 
Explanation:	Answer: B The sentence implies a decision that satisfied everyone, so it must indicate full agreement. divisive = causes disagreement unanimous = agreed by all vague = unclear contested = disputed differ = verb, not suitable So the correct word is "unanimous."

Q. 25	Sentences are given below with a highlighted word that may be incorrect. From the given options, choose the word that can best replace the highlighted word to make the sentence correct. The committee noted that the proposed amendments to the insolvency law are adverse to a more efficient resolution process for stressed assets in the banking system. A) favorable ✓ B) harmful ✗ C) contrary ✗ D) irrelevant ✗ E) No replacement required ✗
Explanation:	Answer: A “Adverse to” means harmful or unfavorable, which contradicts the idea of improving an efficient resolution process. The sentence requires a positive word meaning helpful. favorable = suitable and supportive harmful / contrary / irrelevant (don't fit the meaning) So the correct replacement is “favorable.”

Q. 26

Sentences are given below with a highlighted word that may be incorrect. From the given options, choose the word that can best replace the highlighted word to make the sentence correct.

Analysts argue that the current volatility in the equity markets is merely a/an enduring phase, and long-term investors should remain focused on fundamental growth drivers.

A) permanent

B) temporary

C) perpetual

D) volatile

E) No replacement required

**Explanation:****Answer: B**

The phrase “merely a enduring phase” is incorrect because “enduring” implies long-lasting, which contradicts the idea of short-term market volatility.

The sentence needs a word meaning short-lived:

temporary = short-term

permanent / perpetual = long-lasting

volatile = unstable (not fitting here)

So the correct replacement is “temporary.”

Correct answer: b) temporary

Q. 27	Sentences are given below with a highlighted word that may be incorrect. From the given options, choose the word that can best replace the highlighted word to make the sentence correct. To maintain its competitive edge in the EdTech sector, the company must alienate the latest advancements in artificial intelligence to personalize the learning experience for its users. A) discard  B) broadcast  C) separate  D) integrate  E) No replacement required 
Explanation:	Answer: D “Alienate” means to distance or isolate, which is incorrect in this context. The sentence requires a word meaning to adopt or incorporate new technology. integrate = combine or incorporate discard / broadcast / separate (don't fit the meaning) So the correct replacement is “integrate.” Correct answer: d) integrate

Q. 28	Each of the following questions consists of four sentences labeled (a), (b), (c), and (d). Identify the sentence that is grammatically incorrect. If all the given sentences are grammatically correct, select (e) All are correct as your answer. 28. ? A) The human brain consists of billions of neuron that communicate through complex electrical and chemical signals.  B) Sustainable agriculture practices aim to produce food while protecting the environment for future generations to enjoy.  C) Many historical documents were written on parchment because it was more durable than the early paper types.  D) Geopolitics examines the influence of geographic factors on the political power and foreign policy of states.  E) All are correct 
Explanation:	Answer: A Sentence (a) is grammatically incorrect. Error: "billions of neuron" → should be plural "neurons" Corrected sentence: The human brain consists of billions of neurons that communicate through complex electrical and chemical signals. Sentences (b), (c), and (d) are correct.

Q. 29

Each of the following questions consists of four sentences labeled (a), (b), (c), and (d). Identify the sentence that is grammatically incorrect. If all the given sentences are grammatically correct, select (e) All are correct as your answer.

29. ?

A) Urbanization leads to increased population density which often puts a strain on existing public infrastructure systems. 

B) Scientific theories must be supported by empirical evidence gathered through rigorous testing and objective observation techniques. 

C) Cultural heritage sites offer valuable insights into the traditions and values of civilizations that came before. 

D) Biodiversity is essential for maintaining healthy ecosystems that provide us with clean air and fresh water. 

E) All are correct 

Explanation:

Answer: C

Sentence (c) is grammatically incorrect.

Error: "valueful" is not the correct word

Correct word: "valuable"

Corrected sentence:

Cultural heritage sites offer **valuable** insights into the traditions and values of civilizations that came before.

Sentences (a), (b), and (d) are correct.

Q. 30	Each of the following questions consists of four sentences labeled (a), (b), (c), and (d). Identify the sentence that is grammatically incorrect. If all the given sentences are grammatically correct, select (e) All are correct as your answer. 30. ? A) Global trade agreements play a significant role in determining the economic stability of developing nations today.  B) Mathematical equations provide a precise language for describing the complex patterns found throughout the natural world.  C) Analyzing literary themes requires a deep understanding of the historical context in which the author lived.  D) Renewable energy sources like wind and solar power are crucial for reducing our carbon footprint effectively.  E) All are correct 
Explanation:	Answer: E Each sentence is clear, properly structured, and free from errors in grammar, spelling, and usage. Hence e) All are correct is the right answer.

Quantitative Aptitude

Q. 31	What approximate value will come in the place of (?) in the following questions? $90.32 \div 15 * \sqrt{226} - 505.4 + ? = 240.02$ A) 595  B) 625  C) 535  D) 655  E) 585 
Explanation:	Answer: D $90.32 \div 15 * \sqrt{226} - 505.4 + ? = 240.02$ $90 \div 15 * \sqrt{225} - 505 + ? = 240.02$ $90 - 505 + ? = 240$ $? = 240 + 505 - 90$ $? = 655$ Hence, the correct answer is option D.

Q. 32

What approximate value will come in the place of (?) in the following questions?

$$210.9 - \sqrt{[(-15)^2 - \{9.89 * (46.9 - 27.02)\}]} = ?$$

A) 206 B) 310 C) 291 D) 218 E) 306 **Answer: A**

$$210.9 - \sqrt{[(-15)^2 - \{9.89 * (46.9 - 27.02)\}]} = ?$$

$$211 - \sqrt{[(-15)^2 - \{10 * (47 - 27)\}]} = ?$$

$$211 - \sqrt{[225 - 10 * 20]} = ?$$

$$211 - \sqrt{[225 - 200]} = ?$$

$$211 - \sqrt{25} = ?$$

$$211 - 5 = ?$$

$$206 = ?$$

Hence, the correct answer is option A.

Explanation:

Q. 33	What approximate value will come in the place of (?) in the following questions? 69.9% of 899.8 - 24.8% of 1200 = ? + $\sqrt{1520.9}$ A) 328  B) 291  C) 274  D) 321  E) 269 
Explanation:	Answer: B 69.9% of 899.8 - 24.8% of 1200 = ? + $\sqrt{1520.9}$ 70% of 900 - 25% of 1200 = ? + $\sqrt{1521}$ 630 - 300 = ? + 39 330 = ? + 39 330 - 39 = ? 291 = ? Hence, the correct answer is option B.

Q. 34	What approximate value will come in the place of (?) in the following questions? $\sqrt{?} \times 23.02 + 49.1\% \text{ of } 1099.89 = 654.02$ A) 49  B) 81  C) 36  D) 16  E) 25 
Explanation:	Answer: E $\sqrt{?} \times 23.02 + 49.1\% \text{ of } 1099.89 = 654.02$ $\sqrt{?} \times 23 + 49\% \text{ of } 1100 = 654$ $\sqrt{?} \times 23 + 539 = 654$ $\sqrt{?} \times 23 = 115$ $\sqrt{?} = 5$ $? = 25$ Hence, the correct answer is option E.

Q. 35	What approximate value will come in the place of (?) in the following questions? $(1/2.87) \text{ of } 599.89 + \sqrt{1295.91} * 4.98 - (14.99)^2 = ?$ A) 135  B) 125  C) 155  D) 145  E) 115 
Explanation:	Answer: C $(1/2.87) \text{ of } 599.89 + \sqrt{1295.91} * 4.98 - (14.99)^2 = ?$ $(1/3) \text{ of } 600 + \sqrt{1296} * 5 - (15)^2 = ?$ $(1/3) * 600 + 36 * 5 - 225 = ?$ $200 + 180 - 225 = ?$ $180 - 25 = ?$ $155 = ?$ Hence, the correct answer is option C.

Q. 36

Study the following information carefully and answer the questions given below.

The given line graph shows the percentage distribution of the total number of candidates who appeared for bank exams in each city out of the total number of candidates who appeared for bank exams in all five cities together, along with the percentage of candidates from each city who qualified the exam.

Note: The total number of candidates who appeared for the bank exams across all five cities together is 40000.

Note:

The total number of candidates who appeared for bank exam = The number of candidates who qualified + The number of candidates who did not qualified

Find the difference between the total number of qualified candidates from cities A and E together and the total number of not qualified candidates from cities C and D together.

- A) 6400 ✗
- B) 6500 ✗
- C) 7100 ✗
- D) 6900 ✓
- E) 7900 ✗

City A:

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified = $10000 \times 65\% = 6500$

The number of candidates who not did qualified = $10000 - 6500 = 3500$

City B:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 40\% = 2400$

The number of candidates who not did qualified = $6000 - 2400 = 3600$

City C:

The number of candidates who appeared = $40000 \times 20\% = 8000$

The number of candidates who qualified = $8000 \times 45\% = 3600$

The number of candidates who not did qualified = $8000 - 3600 = 4400$

City D:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 55\% = 3300$

The number of candidates who not did qualified = $6000 - 3300 = 2700$

City E:

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified the exam = $10000 \times 75\% = 7500$

The number of candidates who not did qualified = $10000 - 7500 = 2500$

Explanation:

City	The number of qualified candidates	The number of not qualified candidates	The number of candidates appeared in the exam
A	6500	3500	10000
B	2400	3600	6000
C	3600	4400	8000
D	3300	2700	6000
E	7500	2500	10000

Answer: D

The total number of candidates who qualified the exam from cities A and E together = $6500 + 7500 = 14000$

The total number of not qualified candidates from cities C and D together = $4400 + 2700 = 7100$

The required difference = $14000 - 7100 = 6900$

Hence, the correct answer is option D.

Q. 37

Study the following information carefully and answer the questions given below.

The given line graph shows the percentage distribution of the total number of candidates who appeared for bank exams in each city out of the total number of candidates who appeared for bank exams in all five cities together, along with the percentage of candidates from each city who qualified the exam.

Note: The total number of candidates who appeared for the bank exams across all five cities together is 40000.

Note:

The total number of candidates who appeared for bank exam = The number of candidates who qualified + The number of candidates who did not qualified

What is the ratio between the number of qualified candidates from City B and the number of not qualified candidates from City E?

- A) 15 : 14 ☒
- B) 24 : 25 ☒
- C) 7 : 15 ☒
- D) 24 : 17 ☒
- E) 25 : 21 ☒

City A:

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified = $10000 \times 65\% = 6500$

The number of candidates who not did qualified = $10000 - 6500 = 3500$

City B:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 40\% = 2400$

The number of candidates who not did qualified = $6000 - 2400 = 3600$

City C:

The number of candidates who appeared = $40000 \times 20\% = 8000$

The number of candidates who qualified = $8000 \times 45\% = 3600$

The number of candidates who not did qualified = $8000 - 3600 = 4400$

City D:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 55\% = 3300$

The number of candidates who not did qualified = $6000 - 3300 = 2700$

Explanation:**City E:**

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified the exam = $10000 \times 75\% = 7500$

The number of candidates who not did qualified = $10000 - 7500 = 2500$

City	The number of qualified candidates	The number of not qualified candidates	The number of candidates appeared in the exam
A	6500	3500	10000
B	2400	3600	6000
C	3600	4400	8000
D	3300	2700	6000
E	7500	2500	10000

Answer: B

The number of qualified candidates from City B = 2400

The number of unqualified candidates from City E = 2500

The required ratio = $2400 : 2500 = 24 : 25$

Hence, the correct answer is option B.

Q. 38

Study the following information carefully and answer the questions given below.

The given line graph shows the percentage distribution of the total number of candidates who appeared for bank exams in each city out of the total number of candidates who appeared for bank exams in all five cities together, along with the percentage of candidates from each city who qualified the exam.

Note: The total number of candidates who appeared for the bank exams across all five cities together is 40000.

Note:

The total number of candidates who appeared for bank exam = The number of candidates who qualified + The number of candidates who did not qualified

The total number of candidates who appeared from cities A, B and C together is what percentage more or less than the total number of candidates who appeared from cities D and E together?

- A) 40% more ☒
- B) 30% more ☒
- C) 50% less ☒
- D) 45% less ☒
- E) 50% more ☒

City A:

The number of candidates who appeared = $40000 * 25\% = 10000$

The number of candidates who qualified = $10000 * 65\% = 6500$

The number of candidates who not did qualified = $10000 - 6500 = 3500$

City B:

The number of candidates who appeared = $40000 * 15\% = 6000$

The number of candidates who qualified = $6000 * 40\% = 2400$

The number of candidates who not did qualified = $6000 - 2400 = 3600$

City C:

The number of candidates who appeared = $40000 * 20\% = 8000$

The number of candidates who qualified = $8000 * 45\% = 3600$

The number of candidates who not did qualified = $8000 - 3600 = 4400$

City D:

The number of candidates who appeared = $40000 * 15\% = 6000$

The number of candidates who qualified = $6000 * 55\% = 3300$

The number of candidates who not did qualified = $6000 - 3300 = 2700$

City E:

The number of candidates who appeared = $40000 * 25\% = 10000$

The number of candidates who qualified the exam = $10000 * 75\% = 7500$

The number of candidates who not did qualified = $10000 - 7500 = 2500$

Explanation:

City	The number of qualified candidates	The number of not qualified candidates	The number of candidates appeared in the exam
A	6500	3500	10000
B	2400	3600	6000
C	3600	4400	8000
D	3300	2700	6000
E	7500	2500	10000

Answer: E

The total number of candidates who appeared from cities A, B and C = $10000 + 6000 + 8000 = 24000$

The total number of candidates who appeared from cities D and E = $6000 + 10000 = 16000$

The required percentage = $[(24000 - 16000) * 100/16000] = 50\%$ more

Hence, the correct answer is option E.

Q. 39

Study the following information carefully and answer the questions given below.

The given line graph shows the percentage distribution of the total number of candidates who appeared for bank exams in each city out of the total number of candidates who appeared for bank exams in all five cities together, along with the percentage of candidates from each city who qualified the exam.

Note: The total number of candidates who appeared for the bank exams across all five cities together is 40000.

Note:

The total number of candidates who appeared for bank exam = The number of candidates who qualified + The number of candidates who did not qualified

If the ratio of the number of male to female qualified candidates from City B is 5:3, respectively, and the number of not qualified females is 500 more than the number of qualified males, find the number of not qualified males from City B.

- A) 1600 ✓
 B) 2000 ✗
 C) 2400 ✗
 D) 3600 ✗
 E) 2200 ✗

City A:

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified = $10000 \times 65\% = 6500$

The number of candidates who not did qualified = $10000 - 6500 = 3500$

City B:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 40\% = 2400$

The number of candidates who not did qualified = $6000 - 2400 = 3600$

City C:

The number of candidates who appeared = $40000 \times 20\% = 8000$

The number of candidates who qualified = $8000 \times 45\% = 3600$

The number of candidates who not did qualified = $8000 - 3600 = 4400$

City D:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 55\% = 3300$

The number of candidates who not did qualified = $6000 - 3300 = 2700$

Explanation:**City E:**

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified the exam = $10000 \times 75\% = 7500$

The number of candidates who not did qualified = $10000 - 7500 = 2500$

City	The number of qualified candidates	The number of not qualified candidates	The number of candidates appeared in the exam
A	6500	3500	10000
B	2400	3600	6000
C	3600	4400	8000
D	3300	2700	6000
E	7500	2500	10000

Answer: A

The number of qualified males from city B = $2400 \times \frac{5}{8} = 1500$

The number of not qualified females from city B = $1500 + 500 = 2000$

The number of not qualified males from city B = $3600 - 2000 = 1600$

Hence, the correct answer is option A.

Q. 40

Study the following information carefully and answer the questions given below.

The given line graph shows the percentage distribution of the total number of candidates who appeared for bank exams in each city out of the total number of candidates who appeared for bank exams in all five cities together, along with the percentage of candidates from each city who qualified the exam.

Note: The total number of candidates who appeared for the bank exams across all five cities together is 40000.

Note:

The total number of candidates who appeared for bank exam = The number of candidates who qualified + The number of candidates who did not qualified

The total number of not qualified candidates from cities A and E together is how much more or less than the total number of qualified candidates from cities C and D together?

- A) 900 more ✗
- B) 720 more ✗
- C) 900 less ✓
- D) 840 less ✗
- E) 780 less ✗

City A:

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified = $10000 \times 65\% = 6500$

The number of candidates who not did qualified = $10000 - 6500 = 3500$

City B:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 40\% = 2400$

The number of candidates who not did qualified = $6000 - 2400 = 3600$

City C:

The number of candidates who appeared = $40000 \times 20\% = 8000$

The number of candidates who qualified = $8000 \times 45\% = 3600$

The number of candidates who not did qualified = $8000 - 3600 = 4400$

City D:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 55\% = 3300$

The number of candidates who not did qualified = $6000 - 3300 = 2700$

Explanation:**City E:**

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified the exam = $10000 \times 75\% = 7500$

The number of candidates who not did qualified = $10000 - 7500 = 2500$

City	The number of qualified candidates	The number of not qualified candidates	The number of candidates appeared in the exam
A	6500	3500	10000
B	2400	3600	6000
C	3600	4400	8000
D	3300	2700	6000
E	7500	2500	10000

Answer: C

The total number of unqualified candidates from cities A and E together = $3500 + 2500 = 6000$

The number of qualified candidates from cities C and D together = $3600 + 3300 = 6900$

The required answer = $6900 - 6000 = 900$ less

Hence, the correct answer is option C.

Q. 41

Study the following information carefully and answer the questions given below.

The given line graph shows the percentage distribution of the total number of candidates who appeared for bank exams in each city out of the total number of candidates who appeared for bank exams in all five cities together, along with the percentage of candidates from each city who qualified the exam.

Note: The total number of candidates who appeared for the bank exams across all five cities together is 40000.

Note:

The total number of candidates who appeared for bank exam = The number of candidates who qualified + The number of candidates who did not qualified

If the number of candidates who appeared from city F is 33.33% more than that from city D and the number of not qualified candidates from city A is 347 less than that from city F. Find the number of qualified candidates from city F.

- A) 3765 ✗
- B) 4236 ✗
- C) 3298 ✗
- D) 4153 ✓
- E) 3953 ✗

City A:

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified = $10000 \times 65\% = 6500$

The number of candidates who not did qualified = $10000 - 6500 = 3500$

City B:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 40\% = 2400$

The number of candidates who not did qualified = $6000 - 2400 = 3600$

City C:

The number of candidates who appeared = $40000 \times 20\% = 8000$

The number of candidates who qualified = $8000 \times 45\% = 3600$

The number of candidates who not did qualified = $8000 - 3600 = 4400$

City D:

The number of candidates who appeared = $40000 \times 15\% = 6000$

The number of candidates who qualified = $6000 \times 55\% = 3300$

The number of candidates who not did qualified = $6000 - 3300 = 2700$

Explanation:**City E:**

The number of candidates who appeared = $40000 \times 25\% = 10000$

The number of candidates who qualified the exam = $10000 \times 75\% = 7500$

The number of candidates who not did qualified = $10000 - 7500 = 2500$

City	The number of qualified candidates	The number of not qualified candidates	The number of candidates appeared in the exam
A	6500	3500	10000
B	2400	3600	6000
C	3600	4400	8000
D	3300	2700	6000
E	7500	2500	10000

Answer: D

The number of candidates appeared from city F = $6000 \times \frac{4}{3} = 8000$

The number of not qualified candidates from city F = $3500 + 347 = 3847$

The number of qualified candidates from city F = $8000 - 3847 = 4153$

Hence, the correct answer is option D.

Q. 42

Study the following information carefully and answer the questions.

Five companies, F, G, H, I, and J, reported data on the number of male and female employees they hired. The number of male employees hired by Company F is 30 more than that hired by Company H. The ratio of male employees hired by Company G to Company J is 3:5, and the number of female employees hired by Company G is 30% less than that of Company J. The total number of employees hired by companies F, G, and J are 600, 400, and 600, respectively. The number of male employees hired by Company H is 120. The number of male employees hired by company G is 80 more than the number of female employees hired by company I.

If the average salary of male employees across all companies is Rs. 4,000, and the average salary of female employees is Rs. 5,000, find the ratio of the total salary expenditure on male employees in Company F to the total salary expenditure on female employees in Company G.

- A) 4:5 
- B) 3:7 
- C) 7:3 
- D) 3:8 
- E) 8:3 

Explanation:

Let's denote:

The total number of male employees in G as $3y$ and J as $5y$

The total number of female employees in J as z .

ACQ,

The total number of male employees in H = 120

The total number of male employees in F = $120 + 30 = 150$

The total number of female employees in G = $0.7z$

The total number of employees in F = 600

The total number of female employees in F = $600 - 150 = 450$

The total number of employees in G = 400

$$3y + 0.7z = 400 \text{ ---(1)}$$

The total number of employees in J = 600

$$5y + z = 600 \text{ --- (2)}$$

Let's solve equations (1) and (2) to find y and z :

$$3y + 0.7z = 400$$

$$5y + z = 600$$

Multiplying equation (1) by 10 and equation (2) by 7:

$$30y + 7z = 4000 \text{ --- (3)}$$

$$35y + 7z = 4200 \text{ --- (4)}$$

Subtracting equation (3) from (4):

$$5y = 200$$

$$y = 40$$

Now, substituting $y = 40$ in equation (2):

$$5(40) + z = 600$$

$$200 + z = 600$$

$$z = 400$$

The number of male employees in G = $3y = 3 * 40 = 120$

The number of female employees in G = $0.7z = 0.7 * 400 = 280$

The number of male employees in J = $5y = 5 * 40 = 200$

The number of female employees in J = $z = 400$

The number of female employees in I = $120 - 80 = 40$

Company	Male employees	Female employees	Total
F	150	450	600
G	120	280	400
H	120	-	-
I	-	40	-
J	200	400	600

Answer: B

Given that:

The average salary of male employees in all companies = Rs. 4,000

The average salary of female employees in all companies = Rs. 5,000

The total salary expenditure on male employees in Company F

= $150 * 4,000$ = Rs. 6,00,000

The total salary expenditure on female employees in Company G

= $280 * 5,000$ = Rs. 1,40,000

The required Ratio = $6,00,000 : 14,00,000 = 3 : 7$

Hence, the correct option B.

Q. 43

Study the following information carefully and answer the questions.

Five companies, F, G, H, I, and J, reported data on the number of male and female employees they hired. The number of male employees hired by Company F is 30 more than that hired by Company H. The ratio of male employees hired by Company G to Company J is 3:5, and the number of female employees hired by Company G is 30% less than that of Company J. The total number of employees hired by companies F, G, and J are 600, 400, and 600, respectively. The number of male employees hired by Company H is 120. The number of male employees hired by company G is 80 more than the number of female employees hired by company I.

If 15% of the male employees from Company G are transferred to Company F, and simultaneously 10% of the male employees from Company J are also transferred to Company F, what will be the new number of male employees in Company F?

- A) 198 
- B) 180 
- C) 199 
- D) 188 
- E) 202 

Explanation:

Let's denote:

The total number of male employees in G as $3y$ and J as $5y$

The total number of female employees in J as z .

ACQ,

The total number of male employees in H = 120

The total number of male employees in F = $120 + 30 = 150$

The total number of female employees in G = $0.7z$

The total number of employees in F = 600

The total number of female employees in F = $600 - 150 = 450$

The total number of employees in G = 400

$$3y + 0.7z = 400 \text{ ---(1)}$$

The total number of employees in J = 600

$$5y + z = 600 \text{ --- (2)}$$

Let's solve equations (1) and (2) to find y and z :

$$3y + 0.7z = 400$$

$$5y + z = 600$$

Multiplying equation (1) by 10 and equation (2) by 7:

$$30y + 7z = 4000 \text{ --- (3)}$$

$$35y + 7z = 4200 \text{ --- (4)}$$

Subtracting equation (3) from (4):

$$5y = 200$$

$$y = 40$$

Now, substituting $y = 40$ in equation (2):

$$5(40) + z = 600$$

$$200 + z = 600$$

$$z = 400$$

The number of male employees in G = $3y = 3 * 40 = 120$

The number of female employees in G = $0.7z = 0.7 * 400 = 280$

The number of male employees in J = $5y = 5 * 40 = 200$

The number of female employees in J = $z = 400$

The number of female employees in I = $120 - 80 = 40$

Company	Male employees	Female employees	Total
F	150	450	600
G	120	280	400
H	120	-	-
I	-	40	-
J	200	400	600

Answer: D

The male employees transferred from Company G = 15% of 120 = $0.15 * 120 = 18$

The male employees transferred from Company J = 10% of 200 = $0.1 * 200 = 20$

The new number of male employees in Company F = $150 + 18 + 20 = 188$

Hence, the correct option D.

Q. 44

Study the following information carefully and answer the questions.

Five companies, F, G, H, I, and J, reported data on the number of male and female employees they hired. The number of male employees hired by Company F is 30 more than that hired by Company H. The ratio of male employees hired by Company G to Company J is 3:5, and the number of female employees hired by Company G is 30% less than that of Company J. The total number of employees hired by companies F, G, and J are 600, 400, and 600, respectively. The number of male employees hired by Company H is 120. The number of male employees hired by company G is 80 more than the number of female employees hired by company I.

If the total number of employees in Company H is 870, what is the percentage of the male employees in Company F to the number of female employees in Company H?

A) 20% B) 27% C) 16.67% D) 12.5% E) 24% 

Explanation:

Let's denote:

The total number of male employees in G as $3y$ and J as $5y$

The total number of female employees in J as z .

ACQ,

The total number of male employees in H = 120

The total number of male employees in F = $120 + 30 = 150$

The total number of female employees in G = $0.7z$

The total number of employees in F = 600

The total number of female employees in F = $600 - 150 = 450$

The total number of employees in G = 400

$$3y + 0.7z = 400 \text{ ---(1)}$$

The total number of employees in J = 600

$$5y + z = 600 \text{ --- (2)}$$

Let's solve equations (1) and (2) to find y and z :

$$3y + 0.7z = 400$$

$$5y + z = 600$$

Multiplying equation (1) by 10 and equation (2) by 7:

$$30y + 7z = 4000 \text{ --- (3)}$$

$$35y + 7z = 4200 \text{ --- (4)}$$

Subtracting equation (3) from (4):

$$5y = 200$$

$$y = 40$$

Now, substituting $y = 40$ in equation (2):

$$5(40) + z = 600$$

$$200 + z = 600$$

$$z = 400$$

The number of male employees in G = $3y = 3 * 40 = 120$

The number of female employees in G = $0.7z = 0.7 * 400 = 280$

The number of male employees in J = $5y = 5 * 40 = 200$

The number of female employees in J = $z = 400$

The number of female employees in I = $120 - 80 = 40$

Company	Male employees	Female employees	Total
F	150	450	600
G	120	280	400
H	120	-	-
I	-	40	-
J	200	400	600

Answer: A

The number of female employees in Company H = Total employees - Male employees
= 870 - 120 = 750

The required Percentage

= (Male employees in F/Female employees in H) * 100

= (150 / 750) * 100 = 20%

Hence, the correct option A.

Q. 45

Study the following information carefully and answer the questions.

Five companies, F, G, H, I, and J, reported data on the number of male and female employees they hired. The number of male employees hired by Company F is 30 more than that hired by Company H. The ratio of male employees hired by Company G to Company J is 3:5, and the number of female employees hired by Company G is 30% less than that of Company J. The total number of employees hired by companies F, G, and J are 600, 400, and 600, respectively. The number of male employees hired by Company H is 120. The number of male employees hired by company G is 80 more than the number of female employees hired by company I.

Find the difference between the average number of male employees in F, G, and H and the average number of female employees in G, I, and J.

- A) 130 
- B) 175 
- C) 120 
- D) 150 
- E) 110 

Explanation:

Let's denote:

The total number of male employees in G as $3y$ and J as $5y$

The total number of female employees in J as z .

ACQ,

The total number of male employees in H = 120

The total number of male employees in F = $120 + 30 = 150$

The total number of female employees in G = $0.7z$

The total number of employees in F = 600

The total number of female employees in F = $600 - 150 = 450$

The total number of employees in G = 400

$$3y + 0.7z = 400 \text{ ---(1)}$$

The total number of employees in J = 600

$$5y + z = 600 \text{ --- (2)}$$

Let's solve equations (1) and (2) to find y and z :

$$3y + 0.7z = 400$$

$$5y + z = 600$$

Multiplying equation (1) by 10 and equation (2) by 7:

$$30y + 7z = 4000 \text{ --- (3)}$$

$$35y + 7z = 4200 \text{ --- (4)}$$

Subtracting equation (3) from (4):

$$5y = 200$$

$$y = 40$$

Now, substituting $y = 40$ in equation (2):

$$5(40) + z = 600$$

$$200 + z = 600$$

$$z = 400$$

The number of male employees in G = $3y = 3 * 40 = 120$

The number of female employees in G = $0.7z = 0.7 * 400 = 280$

The number of male employees in J = $5y = 5 * 40 = 200$

The number of female employees in J = $z = 400$

The number of female employees in I = $120 - 80 = 40$

Company	Male employees	Female employees	Total
F	150	450	600
G	120	280	400
H	120	-	-
I	-	40	-
J	200	400	600

Answer: E

The average number of male employees in F, G, and H
 $= (F + G + H) / 3 = (150 + 120 + 120) / 3 = 390 / 3 = 130$

The average number of female employees in G, I, and J
 $= (G + I + J) / 3 = (280 + 40 + 400) / 3 = 720 / 3 = 240$

The required Difference $= 240 - 130 = 110$

Hence, the correct option E.

Q. 46

Study the following information carefully and answer the questions.

Five companies, F, G, H, I, and J, reported data on the number of male and female employees they hired. The number of male employees hired by Company F is 30 more than that hired by Company H. The ratio of male employees hired by Company G to Company J is 3:5, and the number of female employees hired by Company G is 30% less than that of Company J. The total number of employees hired by companies F, G, and J are 600, 400, and 600, respectively. The number of male employees hired by Company H is 120. The number of male employees hired by company G is 80 more than the number of female employees hired by company I.

If the number of male employees in Company J increases by 20%, and the number of female employees in Company J increases by 15%, what will be the ratio of the total number of employees in Company G to the new total number of employees in Company J?

- A) 5:8 
- B) 3:5 
- C) 4:7 
- D) 7:4 
- E) 5:3 

Explanation:

Let's denote:

The total number of male employees in G as $3y$ and J as $5y$

The total number of female employees in J as z .

ACQ,

The total number of male employees in H = 120

The total number of male employees in F = $120 + 30 = 150$

The total number of female employees in G = $0.7z$

The total number of employees in F = 600

The total number of female employees in F = $600 - 150 = 450$

The total number of employees in G = 400

$$3y + 0.7z = 400 \text{ ---(1)}$$

The total number of employees in J = 600

$$5y + z = 600 \text{ --- (2)}$$

Let's solve equations (1) and (2) to find y and z :

$$3y + 0.7z = 400$$

$$5y + z = 600$$

Multiplying equation (1) by 10 and equation (2) by 7:

$$30y + 7z = 4000 \text{ --- (3)}$$

$$35y + 7z = 4200 \text{ --- (4)}$$

Subtracting equation (3) from (4):

$$5y = 200$$

$$y = 40$$

Now, substituting $y = 40$ in equation (2):

$$5(40) + z = 600$$

$$200 + z = 600$$

$$z = 400$$

The number of male employees in G = $3y = 3 * 40 = 120$

The number of female employees in G = $0.7z = 0.7 * 400 = 280$

The number of male employees in J = $5y = 5 * 40 = 200$

The number of female employees in J = $z = 400$

The number of female employees in I = $120 - 80 = 40$

Company	Male employees	Female employees	Total
F	150	450	600
G	120	280	400
H	120	-	-
I	-	40	-
J	200	400	600

Answer: C

The new number of male employees in Company J

$$= 200 + (20\% \text{ of } 200) = 240$$

The new number of female employees in Company J

$$= 400 + (15\% \text{ of } 400) = 460$$

$$\text{The total number of employees in Company J} = 240 + 460 = 700$$

$$\text{The total number of employees in Company G} = 120 + 280 = 400$$

$$\text{The required ratio} = 400 \text{ (Company G)} : 700 \text{ (Company J)} = 4 : 7$$

Hence, the correct option C.

Q. 47

In an election between two candidates, 15% of the eligible voters did not cast their votes, and 10% of the votes cast were declared invalid. The winning candidate secured 55% of the valid votes and won by a margin of 612 votes. Find the total number of eligible voters.

A) 5200 B) 8700 C) 8000 D) 6500 E) 7000 **Answer: C**

Let the total number of voters = $100a$

The number of voters who cast their vote = $100a * 85\% = 85a$

The number of valid votes = $85a * 90\%$

According to the question,

$$85a * 90\% * (55\% - 45\%) = 612$$

$$85a * 90\% * 10\% = 612$$

$$a = 80$$

$$\text{The total number of voters} = 100a = 100 * 80 = 8000$$

Hence, the correct answer is option C.

Explanation:

Q. 48

An article is initially sold for Rs. 3200, yielding a profit of 25%. If the article is then sold for Rs. 300 more than its initial selling price, then find the new profit percentage (Approximately).

A) 37% B) 28% C) 31% D) 23% E) 33% **Explanation:****Answer: A**

The cost price of the article = $3200 \times 100/125 = \text{Rs. } 2560$

The new selling price of the article = $\text{Rs. } 3200 + 300 = \text{Rs. } 3500$

The overall profit = $3500 - 2560 = \text{Rs. } 940$

The overall profit percentage = $940 \times 100/2560 = 36.7\%$

=37% (approx)

Hence, the correct answer is option A.

Q. 49

The average weight of a group of 25 students is 52 kg. When two new students A and B join the group, the average weight increases by 4 kg. If the weight of student A is 10 kg more than student B, find the weight of student A.

- A) 112 kg 
- B) 102 kg 
- C) 101 kg 
- D) 111 kg 
- E) 114 kg 

Explanation:**Answer: D**

The total weight of the group = $25 * 52 = 1300$ kg

The new average of the group = $52 + 4 = 56$ kg

The new total weight of the group = $27 * 56 = 1512$ kg

The total weight of A and B = $1512 - 1300 = 212$ kg

Let the weight of B = x kg

The weight of A = $x + 10$ kg

According to the question,

$$x + x + 10 = 212$$

$$2x = 202$$

$$x = 101$$

The weight of A = $101 + 10 = 111$ kg

Hence, the correct answer is option D.

Q. 50

In a mixture, the ratio of the quantity of oil and water is 8 : 1, respectively. If 15 litres of oil and 9 litres of water are added to the mixture, the ratio of oil to water becomes 5 : 1. Find the value of 22.22% of the initial quantity of mixture.

- A) 15 litres 
- B) 20 litres 
- C) 30 litres 
- D) 25 litres 
- E) 32 litres 

Answer: B

$$(22.22\% = 2/9)$$

Let the initial quantity of the oil = 8a litres

The initial quantity of water = a litres

According to the question,

$$(8a + 15) / (a + 9) = 5 / 1$$

$$8a + 15 = 5a + 45$$

$$3a = 30$$

$$a = 10$$

The initial quantity of the mixture = 9a = 9 * 10 = 90 litres

The required value = 90 * 2/9 = 20 litres

Hence, the correct answer is option B.

Explanation:

Q. 51

The average age of P and Q is 25 years. Five years ago, Q's age was 16 years less than R's age at that time. If the ratio of the present ages of P and R is 5 : 6, respectively, find the present age of S, who is 4 years younger than R.

- A) 34 years 
- B) 26 years 
- C) 28 years 
- D) 30 years 
- E) 32 years 

Answer: E

Let the present age of P = 5a years

The present age of R = 6a years

The age of R before 5 years = [6a - 5] years

The age of Q before 5 years = [6a - 5 - 16] = [6a - 21] years

The present age of Q = 6a - 21 + 5 = [6a - 16] years

The total age of P and Q = 25 * 2 = 50 years

According to the question,

$$5a + 6a - 16 = 50$$

$$11a = 66$$

$$a = 6$$

The present age of R = 6 * 6 = 36 years

The present age of S = 36 - 4 = 32 years

Hence, the correct answer is option E.

Explanation:

Q. 52

The ratio of the upstream speed to the downstream speed of a boat is 7 : 25, respectively. If the boat covers 64 km in still water in 2 hours, find the time taken by the boat to travel 350 km downstream.

A) 4 hours B) 7 hours C) 8 hours D) 5 hours E) 6 hours **Explanation:****Answer: B**Let the upstream speed of the boat = $7a$ km/hThe downstream speed of the boat = $25a$ km/hThe speed of the boat in still water = $64/2 = 32$ km/h

According to the question,

$$(7a + 25a)/2 = 32$$

$$16a = 32$$

$$a = 2$$

The downstream speed of the boat = $25 * 2 = 50$ km/hThe time taken by the boat to cover 350 km downstream = $350/50 = 7$ hours

Hence, the correct answer is option B.

Q. 53

A and B started a business with investments of Rs. 1500 and Rs. 3000 respectively. After 5 months, A increased his investment by 20%, while B decreased his investment by 40%. Find the profit ratio of A and B, at the end of 16 months.

A) 116 : 97 B) 93 : 115 C) 91 : 116 D) 91 : 110 E) 93 : 97 **Explanation:****Answer: C**The total investment of A = $[(1500 * 5) + (1800 * 11)] = \text{Rs. } 27300$ The total investment of B = $[(3000 * 5) + (1800 * 11)] = \text{Rs. } 34800$ The profit sharing ratio of A and B = $27300 : 34800 = 91 : 116$

Hence, the correct answer is option C.

Q. 54

The perimeter of a rectangle is equal to the circumference of a circle. If the length of the rectangle is twice the radius of the circle and its breadth is 3 cm more than the radius, find the area of the rectangle.

A) 1008 cm²B) 1872 cm²C) 1194 cm²D) 1728 cm²E) 1824 cm²**Answer: A**

Formula used:

The circumference of the circle = $2\pi r$ The perimeter of the rectangle = $2(\text{length} + \text{breadth})$ The area of the rectangle = $\text{length} \times \text{breadth}$ Let the radius of the circle = r cmThe length of the rectangle = $2r$ The breadth of the rectangle = $(r + 3)$ cmThe perimeter of the rectangle = $2(2r + r + 3) = 6r + 6$ The circumference of the circle = $2 \times \frac{22}{7} \times r = \frac{44r}{7}$

According to the question,

$$6r + 6 = \frac{44r}{7}$$

$$6 = \left(\frac{44r}{7}\right) - 6r$$

$$6 = \frac{2r}{7}$$

$$r = 21$$

The length of the rectangle = $21 \times 2 = 42$ cmThe breadth of the rectangle = $21 + 3 = 24$ cmThe area of the rectangle = $42 \times 24 = 1008$ cm²

Hence, the correct answer is option A.

Explanation:

Q. 55

Ashish invested Rs. x in Scheme A at a rate of 10% simple interest p.a for 2 years. The total amount received from Scheme A was then reinvested in Scheme B at 20% compound interest (compounded annually) for 2 years. If the compound interest earned from Scheme B was Rs. 4224, find the value of x .

A) 6000 B) 5000 C) 7000 D) 8000 E) 4000 **Explanation:****Answer: D**

Formula used:

The simple interest = $PRT/100$ The compound interest = $P[(1 + R/100)^n - 1]$ The simple interest = $x * 10\% * 2 = x * 20\% = x/5$ The amount received from scheme A = $x + x/5 = 6x/5$ The effective rate of compound interest = $20 + 20 + 20 * 20/100 = 44\%$

According to the question,

$$(6x/5) * (44/100) = 4224$$

$$x = 8000$$

Hence, the correct answer is option D.

Q. 56

Find the wrong number in the following number series.

220, 663, 1145, 1674, 2250, 2875

A) 1145 B) 663 C) 1674 D) 2250 E) 220 **Explanation:****Answer: B**

$$220 + (21)^2 = 661$$

$$661 + (22)^2 = 1145$$

$$1145 + (23)^2 = 1674$$

$$1674 + (24)^2 = 2250$$

$$2250 + (25)^2 = 2875$$

Wrong number: 663

Right number: 661

Hence, the correct answer is option B.

Q. 57

Find the wrong number in the following number series.

17, 36, 74, 131, 205, 302

- A) 17 
- B) 74 
- C) 36 
- D) 205 
- E) 131 

Answer: D

$$17 + 19 = 36$$

$$36 + 38 = 74$$

$$74 + 57 = 131$$

$$131 + 76 = 207$$

$$207 + 95 = 302$$

Wrong number: 205

Right number: 207

Hence, the correct answer is option D.

Explanation:

Q. 58

Find the wrong number in the following number series.

1175, 1146, 1123, 1104, 1087, 1072

A) 1072 ✓

B) 1175 ✗

C) 1104 ✗

D) 1146 ✗

E) 1087 ✗

Answer: A $1175 - 29 = 1146$ $1146 - 23 = 1123$ $1123 - 19 = 1104$ $1104 - 17 = 1087$ $1087 - 13 = \mathbf{1074}$

Wrong number: 1072

Right number: 1074

Hence, the correct answer is option A.

Explanation:

Q. 59

Find the wrong number in the following number series.

27, 36, 45, 58, 73, 92, 116

A) 73 B) 92 C) 36 D) 27 E) 45 **Answer: E**27 36 **46** 58 73 92 116

+9 +10 +12 +15 +19 +24

+1 +2 +3 +4 +5

Explanation:

Wrong number: 45

Right number: 46

Hence, the correct answer is option E.

Q. 60

Find the wrong number in the following number series.

24, 36, 72, 150, 540, 1890

A) 540 B) 24 C) 150 D) 36 E) 1890 **Answer: C**

$$24 * 1.5 = 36$$

$$36 * 2 = 72$$

$$72 * 2.5 = \mathbf{180}$$

$$180 * 3 = 540$$

$$540 * 3.5 = 1890$$

Wrong number: 150

Right number: 180

Hence, the correct answer is option C.

Explanation:

Q. 61

Study the following information carefully and answer the questions.

The given table chart shows the total number of Belts and wallets in five shops A, B, C, D and E along with the ratio of number of belts to wallets in each shop.

Shops	Total number of belts and wallets	Ratio of the number of belts to wallets
A	100	9:a
B	$7a + 3$	2:3
C	$10b + 8$	6:b
D	$7a + 2b$	3:4
E	99	$4:(b - 2)$

Note: The number of belts in shop D is 39 and the sum of the total number of belts and wallets in shops B and C together is 158.

The total number of wallets in all five shops together is how much percentage of the total number of both belts and wallets in all five shops together?

- A) 55.75% 
- B) 55.25% 
- C) 56.75% 
- D) 56.25% 
- E) 57.65% 

Explanation:

From note,

The number of wallets sold in shop D = $39 \times \frac{4}{3} = 52$

The total number of belts and wallets in shop D = $39 + 52 = 91$

$$7a + 2b = 91 \text{ ----(1)}$$

The sum of the total number of belts and wallets in shops B and C together = 158

$$7a + 3 + 10b + 8 = 158$$

$$7a + 10b = 158 - 11$$

$$7a + 10b = 147 \text{ ----(2)}$$

From equations (1) and (2),

$$b = 7, a = 11$$

Shop A:

Ratio of belts to wallets = $9:a = 9:11$

Let the number of belts and wallets be $9q$ and $11q$ respectively.

The total number of belts and wallets = 100

$$9q + 11q = 100$$

$$20q = 100$$

$$q = 5$$

The number of belts = $9q = 45$

The number of wallets = $11q = 55$

Shop B:

Let the number of belts and wallets be $2r$ and $3r$ respectively.

The total number of belts and wallets = $7a + 3 = (7 \times 11) + 3 = 80$

$$2r + 3r = 80$$

$$5r = 80$$

$$r = 16$$

The number of belts = $2r = 32$

The number of wallets = $3r = 48$

Shop C:

Ratio of belts to wallets = $6:b = 6:7$

Let the number of belts and wallets be $6z$ and $7z$ respectively.

The total number of belts and wallets = $10b + 8 = (10 \times 7) + 8 = 78$

$$6z + 7z = 78$$

$$13z = 78$$

$$z = 6$$

The number of belts = $6z = 36$

The number of wallets = $7z = 42$

Shop D:

The number of belts = 39

The number of wallets = 52

Shop E:

Ratio of belts to wallets = $4:(b - 2) = 4:(7 - 2) = 4:5$

Let the number of belts and wallets be $4p$ and $5p$ respectively.

The total number of belts and wallets = 99

$$4p + 5p = 99$$

$$9p = 99$$

$$p = 11$$

The number of belts = $4p = 44$

The number of wallets = $5p = 55$

Shops	Number of belts	Number of wallets	Total number of belts and wallets
A	45	55	100
B	32	48	80
C	36	42	78
D	39	52	91
E	44	55	99

Answer: D

Total number of wallets in all five shops = $55 + 48 + 42 + 52 + 55 = 252$

Total number of belts and wallets in all shops = $100 + 80 + 78 + 91 + 99 = 448$

Required percentage = $252/448 * 100 = 56.25\%$

Q. 62

Study the following information carefully and answer the questions.

The given table chart shows the total number of Belts and wallets in five shops A, B, C, D and E along with the ratio of number of belts to wallets in each shop.

Shops	Total number of belts and wallets	Ratio of the number of belts to wallets
A	100	9:a
B	$7a + 3$	2:3
C	$10b + 8$	6:b
D	$7a + 2b$	3:4
E	99	$4:(b - 2)$

Note: The number of belts in shop D is 39 and the sum of the total number of belts and wallets in shops B and C together is 158.

The number of leather wallets in shop F is 25% more than $\frac{5}{11}$ th of the number of belts in shop E and the number of canvas wallets in shop F is 15 less than the total number of wallets in shop E. If each canvas wallet and each leather wallet cost Rs. 75 and Rs. 130 respectively, find the ratio of the total cost of canvas wallets to that of leather wallets in shop F.

- A) 12:11 
- B) 12:13 
- C) 11:12 
- D) 13:12 
- E) None of the above 

Explanation:

From note,

The number of wallets sold in shop D = $39 \times \frac{4}{3} = 52$

The total number of belts and wallets in shop D = $39 + 52 = 91$

$$7a + 2b = 91 \text{ ----(1)}$$

The sum of the total number of belts and wallets in shops B and C together = 158

$$7a + 3 + 10b + 8 = 158$$

$$7a + 10b = 158 - 11$$

$$7a + 10b = 147 \text{ ----(2)}$$

From equations (1) and (2),

$$b = 7, a = 11$$

Shop A:

Ratio of belts to wallets = $9:a = 9:11$

Let the number of belts and wallets be $9q$ and $11q$ respectively.

The total number of belts and wallets = 100

$$9q + 11q = 100$$

$$20q = 100$$

$$q = 5$$

The number of belts = $9q = 45$

The number of wallets = $11q = 55$

Shop B:

Let the number of belts and wallets be $2r$ and $3r$ respectively.

The total number of belts and wallets = $7a + 3 = (7 \times 11) + 3 = 80$

$$2r + 3r = 80$$

$$5r = 80$$

$$r = 16$$

The number of belts = $2r = 32$

The number of wallets = $3r = 48$

Shop C:

Ratio of belts to wallets = $6:b = 6:7$

Let the number of belts and wallets be $6z$ and $7z$ respectively.

The total number of belts and wallets = $10b + 8 = (10 \times 7) + 8 = 78$

$$6z + 7z = 78$$

$$13z = 78$$

$$z = 6$$

The number of belts = $6z = 36$

The number of wallets = $7z = 42$

Shop D:

The number of belts = 39

The number of wallets = 52

Shop E:

Ratio of belts to wallets = $4:(b - 2) = 4:(7 - 2) = 4:5$

Let the number of belts and wallets be $4p$ and $5p$ respectively.

The total number of belts and wallets = 99

$$4p + 5p = 99$$

$$9p = 99$$

$$p = 11$$

The number of belts = $4p = 44$

The number of wallets = $5p = 55$

Shops	Number of belts	Number of wallets	Total number of belts and wallets
A	45	55	100
B	32	48	80
C	36	42	78
D	39	52	91
E	44	55	99

Answer: B

Number of leather wallets in shop F = 125% of $(44 * 5/11) = (125/100) * 20 = 25$

Number of canvas wallets in shop F = $55 - 15 = 40$

Total cost of canvas wallets in shop F = $40 * 75 = \text{Rs. } 3000$

Total cost of leather wallets in shop F = $25 * 130 = \text{Rs. } 3250$

Required ratio = $3000:3250 = 12:13$.

Q. 63

Study the following information carefully and answer the questions.

The given table chart shows the total number of Belts and wallets in five shops A, B, C, D and E along with the ratio of number of belts to wallets in each shop.

Shops	Total number of belts and wallets	Ratio of the number of belts to wallets
A	100	9:a
B	$7a + 3$	2:3
C	$10b + 8$	6:b
D	$7a + 2b$	3:4
E	99	$4:(b - 2)$

Note: The number of belts in shop D is 39 and the sum of the total number of belts and wallets in shops B and C together is 158.

The ratio of the number of sold belts to sold wallets in shop C is 3:4 and the ratio of the number of unsold wallets to unsold belts in the same shop is 5:6. Find the difference between the total number of sold and unsold products (belts + wallets) in shop C.

- A) 42 
- B) 44 
- C) 33 
- D) 43 
- E) 34 

Explanation:

From note,

The number of wallets sold in shop D = $39 \times \frac{4}{3} = 52$

The total number of belts and wallets in shop D = $39 + 52 = 91$

$$7a + 2b = 91 \text{ ----(1)}$$

The sum of the total number of belts and wallets in shops B and C together = 158

$$7a + 3 + 10b + 8 = 158$$

$$7a + 10b = 158 - 11$$

$$7a + 10b = 147 \text{ ----(2)}$$

From equations (1) and (2),

$$b = 7, a = 11$$

Shop A:

Ratio of belts to wallets = $9:a = 9:11$

Let the number of belts and wallets be $9q$ and $11q$ respectively.

The total number of belts and wallets = 100

$$9q + 11q = 100$$

$$20q = 100$$

$$q = 5$$

The number of belts = $9q = 45$

The number of wallets = $11q = 55$

Shop B:

Let the number of belts and wallets be $2r$ and $3r$ respectively.

The total number of belts and wallets = $7a + 3 = (7 \times 11) + 3 = 80$

$$2r + 3r = 80$$

$$5r = 80$$

$$r = 16$$

The number of belts = $2r = 32$

The number of wallets = $3r = 48$

Shop C:

Ratio of belts to wallets = $6:b = 6:7$

Let the number of belts and wallets be $6z$ and $7z$ respectively.

The total number of belts and wallets = $10b + 8 = (10 \times 7) + 8 = 78$

$$6z + 7z = 78$$

$$13z = 78$$

$$z = 6$$

The number of belts = $6z = 36$

The number of wallets = $7z = 42$

Shop D:

The number of belts = 39

The number of wallets = 52

Shop E:

Ratio of belts to wallets = $4:(b - 2) = 4:(7 - 2) = 4:5$

Let the number of belts and wallets be $4p$ and $5p$ respectively.

The total number of belts and wallets = 99

$$4p + 5p = 99$$

$$9p = 99$$

$$p = 11$$

The number of belts = $4p = 44$

The number of wallets = $5p = 55$

Shops	Number of belts	Number of wallets	Total number of belts and wallets
A	45	55	100
B	32	48	80
C	36	42	78
D	39	52	91
E	44	55	99

Answer: E

Let the number of sold belts and wallets in shop C be $3m$ and $4m$ respectively.

Let the number of unsold belts and wallets in shop C be $6n$ and $5n$ respectively.

$$3m + 6n = 36$$

$$m + 2n = 12 \text{ ----(1)}$$

$$4m + 5n = 42 \text{ ----(2)}$$

From equations (1) and (2),

$$m = 8, n = 2$$

The number of sold belts in shop C = $3m = 3 \times 8 = 24$

The number of sold wallets in shop C = $4m = 4 \times 8 = 32$

The number of unsold belts in shop C = $6n = 6 \times 2 = 12$

The number of unsold wallets in shop C = $5n = 5 \times 2 = 10$

Required difference = $(24 + 32) - (12 + 10) = 56 - 22 = 34$

Q. 64

Study the following information carefully and answer the questions.

The given table chart shows the total number of Belts and wallets in five shops A, B, C, D and E along with the ratio of number of belts to wallets in each shop.

Shops	Total number of belts and wallets	Ratio of the number of belts to wallets
A	100	9:a
B	$7a + 3$	2:3
C	$10b + 8$	6:b
D	$7a + 2b$	3:4
E	99	$4:(b - 2)$

Note: The number of belts in shop D is 39 and the sum of the total number of belts and wallets in shops B and C together is 158.

After adding a certain number of belts and wallets from shop P, the average number of belts in all six shops increases by 1.8 and the average number of wallets in all six shops decreases by 2.4. Find the total number of belts and wallets in shop P.

A) 86 B) 89 C) 84 D) 85 E) 88 

Explanation:

From note,

The number of wallets sold in shop D = $39 \times \frac{4}{3} = 52$

The total number of belts and wallets in shop D = $39 + 52 = 91$

$$7a + 2b = 91 \text{ ----(1)}$$

The sum of the total number of belts and wallets in shops B and C together = 158

$$7a + 3 + 10b + 8 = 158$$

$$7a + 10b = 158 - 11$$

$$7a + 10b = 147 \text{ ----(2)}$$

From equations (1) and (2),

$$b = 7, a = 11$$

Shop A:

Ratio of belts to wallets = $9:a = 9:11$

Let the number of belts and wallets be $9q$ and $11q$ respectively.

The total number of belts and wallets = 100

$$9q + 11q = 100$$

$$20q = 100$$

$$q = 5$$

The number of belts = $9q = 45$

The number of wallets = $11q = 55$

Shop B:

Let the number of belts and wallets be $2r$ and $3r$ respectively.

The total number of belts and wallets = $7a + 3 = (7 \times 11) + 3 = 80$

$$2r + 3r = 80$$

$$5r = 80$$

$$r = 16$$

The number of belts = $2r = 32$

The number of wallets = $3r = 48$

Shop C:

Ratio of belts to wallets = $6:b = 6:7$

Let the number of belts and wallets be $6z$ and $7z$ respectively.

The total number of belts and wallets = $10b + 8 = (10 \times 7) + 8 = 78$

$$6z + 7z = 78$$

$$13z = 78$$

$$z = 6$$

The number of belts = $6z = 36$

The number of wallets = $7z = 42$

Shop D:

The number of belts = 39

The number of wallets = 52

Shop E:

Ratio of belts to wallets = $4:(b - 2) = 4:(7 - 2) = 4:5$

Let the number of belts and wallets be $4p$ and $5p$ respectively.

The total number of belts and wallets = 99

$$4p + 5p = 99$$

$$9p = 99$$

$$p = 11$$

The number of belts = $4p = 44$

The number of wallets = $5p = 55$

Shops	Number of belts	Number of wallets	Total number of belts and wallets
A	45	55	100
B	32	48	80
C	36	42	78
D	39	52	91
E	44	55	99

Answer: A

Before adding the products from shop P,

The average number of belts in all five shops = $(45 + 32 + 36 + 39 + 44)/5$
 $= 196/5 = 39.2$

The average number of wallets in all five shops = $(55 + 48 + 42 + 52 + 55)/5$
 $= 252/5 = 50.4$

After including products from shop P,

The average number of belts in all six shops = $39.2 + 1.8 = 41$

The average number of wallets in all six shops = $50.4 - 2.4 = 48$

The number of belts in shop P = $(41 * 6) - 196 = 246 - 196 = 50$

The number of wallets in shop P = $(48 * 6) - 252 = 288 - 252 = 36$

The total number of belts and wallets in shop P = $50 + 36 = 86$

Q. 65

Study the following information carefully and answer the questions.

The given table chart shows the total number of Belts and wallets in five shops A, B, C, D and E along with the ratio of number of belts to wallets in each shop.

Shops	Total number of belts and wallets	Ratio of the number of belts to wallets
A	100	9:a
B	$7a + 3$	2:3
C	$10b + 8$	6:b
D	$7a + 2b$	3:4
E	99	$4:(b - 2)$

Note: The number of belts in shop D is 39 and the sum of the total number of belts and wallets in shops B and C together is 158.

In shop A, x belts and y wallets and in shop C, 2x wallets and 2y belts were damaged and the ratio of the remaining number of belts to wallets in shop A and shop C is 4:5 and 2:3 respectively. Find the total number of remaining wallets and belts in shops C and A together.

- A) 99 
- B) 110 
- C) 121 
- D) 125 
- E) 116 

Explanation:

From note,

The number of wallets sold in shop D = $39 \times \frac{4}{3} = 52$

The total number of belts and wallets in shop D = $39 + 52 = 91$

$$7a + 2b = 91 \text{ ----(1)}$$

The sum of the total number of belts and wallets in shops B and C together = 158

$$7a + 3 + 10b + 8 = 158$$

$$7a + 10b = 158 - 11$$

$$7a + 10b = 147 \text{ ----(2)}$$

From equations (1) and (2),

$$b = 7, a = 11$$

Shop A:

Ratio of belts to wallets = $9:a = 9:11$

Let the number of belts and wallets be $9q$ and $11q$ respectively.

The total number of belts and wallets = 100

$$9q + 11q = 100$$

$$20q = 100$$

$$q = 5$$

The number of belts = $9q = 45$

The number of wallets = $11q = 55$

Shop B:

Let the number of belts and wallets be $2r$ and $3r$ respectively.

The total number of belts and wallets = $7a + 3 = (7 \times 11) + 3 = 80$

$$2r + 3r = 80$$

$$5r = 80$$

$$r = 16$$

The number of belts = $2r = 32$

The number of wallets = $3r = 48$

Shop C:

Ratio of belts to wallets = $6:b = 6:7$

Let the number of belts and wallets be $6z$ and $7z$ respectively.

The total number of belts and wallets = $10b + 8 = (10 \times 7) + 8 = 78$

$$6z + 7z = 78$$

$$13z = 78$$

$$z = 6$$

The number of belts = $6z = 36$

The number of wallets = $7z = 42$

Shop D:

The number of belts = 39

The number of wallets = 52

Shop E:

Ratio of belts to wallets = $4:(b - 2) = 4:(7 - 2) = 4:5$

Let the number of belts and wallets be $4p$ and $5p$ respectively.

The total number of belts and wallets = 99

$$4p + 5p = 99$$

$$9p = 99$$

$$p = 11$$

The number of belts = $4p = 44$

The number of wallets = $5p = 55$

Shops	Number of belts	Number of wallets	Total number of belts and wallets
A	45	55	100
B	32	48	80
C	36	42	78
D	39	52	91
E	44	55	99

Answer: C

From the question,

Shop A:

$$(45 - x)/(55 - y) = 4/5$$

$$5 * (45 - x) = 4 * (55 - y)$$

$$225 - 5x = 220 - 4y$$

$$5x - 4y = 5 \text{ ----(1)}$$

Shop C:

$$(36 - 2y)/(42 - 2x) = 2/3$$

$$3 * (36 - 2y) = 2 * (42 - 2x)$$

$$108 - 6y = 84 - 4x$$

$$4x - 6y = -24$$

$$2x - 3y = -12 \text{ ----(2)}$$

From equations (1) and (2),

$$x = 9, y = 10$$

The remaining number of belts in shop A = $45 - x = 45 - 9 = 36$

The remaining number of wallets in shop A = $55 - y = 55 - 10 = 45$

The remaining number of belts in shop C = $36 - 2y = 36 - 20 = 16$

The remaining number of wallets in shop C = $42 - 2x = 42 - 18 = 24$

The total number of remaining belts and wallets in shops A and C together = $36 + 45 + 16 + 24 = 121$

Reasoning Ability

Q. 66

Study the following information carefully and answer the given questions.

Nine persons - P, Q, R, S, T, U, V, W and X live in three different cities, viz., Ooty, Manali, and Goa. At least two persons but not more than four persons live in each city.

R and U live in the same city. P lives with an odd number of persons, but neither lives with R nor lives in Goa. Q neither lives in Manali nor lives in Goa. T lives with an even number of persons, but neither lives with P nor lives in Goa. S lives with only one person. V and X live in the same city. W doesn't live in Goa.

In which of the following cities does U live?A) Manali B) Ooty C) Goa D) Either a or b E) Either b or c 

Explanation:**Final arrangement:**

Cities	Persons
Ooty	Q, T, W
Manali	P, S
Goa	R, U, V, X

We have,

- R and U live in the same city.
- P lives with an odd number of persons, but neither lives with R nor lives in Goa.
- Q neither lives in Manali nor lives in Goa.

From the above conditions, there are three possibilities

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	P, Q
Manali	P	R, U	P
Goa			R, U

Again, we have,

- T lives with an even number of persons but neither lives with P nor lives in Goa.
- S lives with only one person.

From the above conditions, Case-1 gets eliminated because the condition, T lives with an even number of persons, but neither lives with P nor lives in Goa, which is not satisfied.

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	Q, T
Manali	P	R, U, T	P, S
Goa		S	R, U

Again, we have,

- V and X live in the same city.
- W doesn't live in Goa.

From the above conditions, Case-2 gets eliminated because W doesn't live in Goa, which is not satisfied. Hence, case-3 shows the final arrangement.

Cities	Case 2	Case 3
	Persons	Persons
Ooty	P, Q, V, X	Q, T, W
Manali	R, U, T	P, S
Goa	S, W	R, U, V, X

Answer: C

Q. 67

Study the following information carefully and answer the given questions.

Nine persons - P, Q, R, S, T, U, V, W and X live in three different cities, viz., Ooty, Manali, and Goa. At least two persons but not more than four persons live in each city.

R and U live in the same city. P lives with an odd number of persons, but neither lives with R nor lives in Goa. Q neither lives in Manali nor lives in Goa. T lives with an even number of persons, but neither lives with P nor lives in Goa. S lives with only one person. V and X live in the same city. W doesn't live in Goa.

Who among the following person lives in Manali as per the final arrangement?

- A) V 
- B) T 
- C) R 
- D) S 
- E) U 

Explanation:**Final arrangement:**

Cities	Persons
Ooty	Q, T, W
Manali	P, S
Goa	R, U, V, X

We have,

- R and U live in the same city.
- P lives with an odd number of persons, but neither lives with R nor lives in Goa.
- Q neither lives in Manali nor lives in Goa.

From the above conditions, there are three possibilities

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	P/, Q
Manali	P	R, U	P/
Goa			R, U

Again, we have,

- T lives with an even number of persons but neither lives with P nor lives in Goa.
- S lives with only one person.

From the above conditions, Case-1 gets eliminated because the condition, T lives with an even number of persons, but neither lives with P nor lives in Goa, which is not satisfied.

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	Q, T
Manali	P	R, U, T	P, S
Goa		S	R, U

Again, we have,

- V and X live in the same city.
- W doesn't live in Goa.

From the above conditions, Case-2 gets eliminated because W doesn't live in Goa, which is not satisfied. Hence, case-3 shows the final arrangement.

Cities	Case 2	Case 3
	Persons	Persons
Ooty	P, Q, V, X	Q, T, W
Manali	R, U, T	P, S
Goa	S, W	R, U, V, X

Answer: D

Q. 68

Study the following information carefully and answer the given questions.

Nine persons - P, Q, R, S, T, U, V, W and X live in three different cities, viz., Ooty, Manali, and Goa. At least two persons but not more than four persons live in each city.

R and U live in the same city. P lives with an odd number of persons, but neither lives with R nor lives in Goa. Q neither lives in Manali nor lives in Goa. T lives with an even number of persons, but neither lives with P nor lives in Goa. S lives with only one person. V and X live in the same city. W doesn't live in Goa.

The number of persons living in Goa is ____ than the number of persons living in Manali.

A) Same as 

B) Two more 

C) One less 

D) One more 

E) Two less 

Explanation:**Final arrangement:**

Cities	Persons
Ooty	Q, T, W
Manali	P, S
Goa	R, U, V, X

We have,

- R and U live in the same city.
- P lives with an odd number of persons, but neither lives with R nor lives in Goa.
- Q neither lives in Manali nor lives in Goa.

From the above conditions, there are three possibilities

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	P/,Q
Manali	P	R, U	P/
Goa			R, U

Again, we have,

- T lives with an even number of persons but neither lives with P nor lives in Goa.
- S lives with only one person.

From the above conditions, Case-1 gets eliminated because the condition, T lives with an even number of persons, but neither lives with P nor lives in Goa, which is not satisfied.

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	Q, T
Manali	P	R, U, T	P, S
Goa		S	R, U

Again, we have,

- V and X live in the same city.
- W doesn't live in Goa.

From the above conditions, Case-2 gets eliminated because W doesn't live in Goa, which is not satisfied. Hence, case-3 shows the final arrangement.

Cities	Case 2	Case 3
	Persons	Persons
Ooty	P, Q, V, X	Q, T, W
Manali	R, U, T	P, S
Goa	S, W	R, U, V, X

Answer: B

Q. 69

Study the following information carefully and answer the given questions.

Nine persons - P, Q, R, S, T, U, V, W and X live in three different cities, viz., Ooty, Manali, and Goa. At least two persons but not more than four persons live in each city.

R and U live in the same city. P lives with an odd number of persons, but neither lives with R nor lives in Goa. Q neither lives in Manali nor lives in Goa. T lives with an even number of persons, but neither lives with P nor lives in Goa. S lives with only one person. V and X live in the same city. W doesn't live in Goa.

Which of the following pair of persons lives with T based on the final arrangement?

- A) R and V 
- B) P and S 
- C) T and R 
- D) V and X 
- E) W and Q 

Explanation:**Final arrangement:**

Cities	Persons
Ooty	Q, T, W
Manali	P, S
Goa	R, U, V, X

We have,

- R and U live in the same city.
- P lives with an odd number of persons, but neither lives with R nor lives in Goa.
- Q neither lives in Manali nor lives in Goa.

From the above conditions, there are three possibilities

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	P/,Q
Manali	P	R, U	P/
Goa			R, U

Again, we have,

- T lives with an even number of persons but neither lives with P nor lives in Goa.
- S lives with only one person.

From the above conditions, Case-1 gets eliminated because the condition, T lives with an even number of persons, but neither lives with P nor lives in Goa, which is not satisfied.

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	Q, T
Manali	P	R, U, T	P, S
Goa		S	R, U

Again, we have,

- V and X live in the same city.
- W doesn't live in Goa.

From the above conditions, Case-2 gets eliminated because W doesn't live in Goa, which is not satisfied. Hence, case-3 shows the final arrangement.

Cities	Case 2	Case 3
	Persons	Persons
Ooty	P, Q, V, X	Q, T, W
Manali	R, U, T	P, S
Goa	S, W	R, U, V, X

Answer: E

Q. 70

Study the following information carefully and answer the given questions.

Nine persons - P, Q, R, S, T, U, V, W and X live in three different cities, viz., Ooty, Manali, and Goa. At least two persons but not more than four persons live in each city.

R and U live in the same city. P lives with an odd number of persons, but neither lives with R nor lives in Goa. Q neither lives in Manali nor lives in Goa. T lives with an even number of persons, but neither lives with P nor lives in Goa. S lives with only one person. V and X live in the same city. W doesn't live in Goa.

Four of the following five pairs are alike in a certain way based on the given arrangement and thus form a group. Which one of the following pairs does not belong to the group?

A) T and S B) S and P C) R and V D) U and X E) W and Q 

Explanation:**Final arrangement:**

Cities	Persons
Ooty	Q, T, W
Manali	P, S
Goa	R, U, V, X

We have,

- R and U live in the same city.
- P lives with an odd number of persons, but neither lives with R nor lives in Goa.
- Q neither lives in Manali nor lives in Goa.

From the above conditions, there are three possibilities

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	P/,Q
Manali	P	R, U	P/
Goa			R, U

Again, we have,

- T lives with an even number of persons but neither lives with P nor lives in Goa.
- S lives with only one person.

From the above conditions, Case-1 gets eliminated because the condition, T lives with an even number of persons, but neither lives with P nor lives in Goa, which is not satisfied.

Cities	Case 1	Case 2	Case 3
	Persons	Persons	Persons
Ooty	R, U, Q	P, Q	Q, T
Manali	P	R, U, T	P, S
Goa		S	R, U

Again, we have,

- V and X live in the same city.
- W doesn't live in Goa.

From the above conditions, Case-2 gets eliminated because W doesn't live in Goa, which is not satisfied. Hence, case-3 shows the final arrangement.

Cities	Case 2	Case 3
	Persons	Persons
Ooty	P, Q, V, X	Q, T, W
Manali	R, U, T	P, S
Goa	S, W	R, U, V, X

Answer: A (In all the other options, the persons live in the same city, except in option A)

Q. 71

Study the following information carefully and answer the given questions

L is the father-in-law of P's mother-in-law. W is the sister-in-law of G. X is the only granddaughter of V, who is married to L. W is the only daughter of V. D is the maternal uncle of T. T's mother is the sister-in-law of G. G does not have any siblings. P is married to X. L has only two children.

How is T related to L's son?

A) Niece 

B) Son 

C) Nephew 

D) Daughter 

E) Either a or c 

Explanation:

Final arrangement:

Answer: C

Q. 72

Study the following information carefully and answer the given questions

L is the father-in-law of P's mother-in-law. W is the sister-in-law of G. X is the only granddaughter of V, who is married to L. W is the only daughter of V. D is the maternal uncle of T. T's mother is the sister-in-law of G. G does not have any siblings. P is married to X. L has only two children.

If W is married to K then which of the following statements is false regarding the above arrangement?

- A) K is the brother-in-law of D ✗
- B) V is the mother-in-law of K ✗
- C) T is the daughter of K ✓
- D) X is the daughter of G ✗
- E) K is the son-in-law of T's grandfather ✗

Final arrangement:

Explanation:

Answer: C

Q. 73

Study the following information carefully and answer the given questions

L is the father-in-law of P's mother-in-law. W is the sister-in-law of G. X is the only granddaughter of V, who is married to L. W is the only daughter of V. D is the maternal uncle of T. T's mother is the sister-in-law of G. G does not have any siblings. P is married to X. L has only two children.

How many female members are there in the family?

- A) Two ☒
- B) Three ☒
- C) Four ☒
- D) Five ☒
- E) Cannot be determined ☒

Explanation:

Final arrangement:

Answer: C

Q. 74

Study the following statements and then decide which of the given conclusions logically follows from the given statements, disregarding the commonly known facts.

Statements:

All Pens are Books

Only a few Books are Papers

No Paper is Eraser

Conclusions:

I. Some Books are not Erasers

II. All Papers being Erasers is a possibility

A) Only conclusion I follows ✓

B) Either conclusion I or II follows ✗

C) Both conclusions I and II follow ✗

D) Neither conclusion I nor II follows ✗

E) Only conclusion II follows ✗

Answer: A

Explanation:

I. Some Books are not Erasers: Here, Only a few Books are Papers, i.e., some Books are Papers. Since no Papers are Erasers, that part of Books which is Papers cannot be Erasers. Hence, some Books are not Erasers is a definite statement. Therefore, the conclusion follows.

II. All Papers being Erasers is a possibility: Here, no Papers are Erasers. Therefore, the possibility that all Papers are Erasers is not valid. Hence, this conclusion does not follow.

Q. 75

Study the following statements and then decide which of the given conclusions logically follows from the given statements, disregarding the commonly known facts.

Statements:

No Bird is Animal

Some Birds are Insects

Only a few Birds are Flies

Conclusions:

I. Some Flies can never be Insects

II. Some Flies being Animals is a possibility

A) Only conclusion I follows ✗

B) Either conclusion I or II follows ✗

C) Both conclusions I and II follow ✗

D) Neither conclusion I nor II follows ✗

E) Only conclusion II follows ✓

Answer: E

Explanation:

I. Some Flies can never be Insects: Here, there is no direct relation between Flies and Insects. The Flies that are associated with Birds may or may not be Insects. Hence, this conclusion does not follow.

II. Some Flies being Animals is a possibility: Here, Flies and Animals are not directly related. But the part of flies that are not connected with Birds can be Animals is a possibility. Hence, this conclusion follows.

Q. 76

Study the following statements and then decide which of the given conclusions logically follows from the given statements, disregarding the commonly known facts.

Statements:

No Laptop is a Mobile

Only a few Mobiles are Tablet

Some Tablets is not Devices

Conclusions:

I. All Tablets can never be Laptops

II. Some Mobiles are not Devices

A) Only conclusion I follows ✓

B) Either conclusion I or II follows ✗

C) Both conclusions I and II follow ✗

D) Neither conclusion I nor II follows ✗

E) Only conclusion II follows ✗

Answer: A

Explanation:

I. All Tablets can never be Laptops: Here, there is no direct relation between Tablets and Laptops. The Tablets that are connected with Mobile cannot be Laptops. Hence, this conclusion follows.

II. Some Mobile is not Devices: Here, Mobile and Devices are not related to each other. The Mobiles that are associated with Tablets may or may not be Devices. Hence, this conclusion does not follow.

Q. 77

Study the following information carefully and answer the given questions.

In a certain code language,

“Students study in library” is coded as “lm pq ax rt ”

“Teachers teach in school” is coded as “yz uv pq wx”

“People study in school” is coded as “pq cd lm yz”

“Students study under trees” is coded as “ lm gh ax ij”

“Teachers teach people well” is coded as “ kl uv cd wx”

(Note: All the given codes are two-letter codes only)

Which of the following is the code for the word “Students” in the given coded language?

A) gh 

B) fk 

C) rt 

D) ax 

E) Either c or d 

Explanation:

Words	Codes
Students	ax
Study	lm
In	pq
Library	rt
Teachers/teach	uv/wx
School	yz
People	cd
Under/trees	gh/ij
Well	kl

Answer: D

Q. 78

Study the following information carefully and answer the given questions.

In a certain code language,

“Students study in library” is coded as “lm pq ax rt ”

“Teachers teach in school” is coded as “yz uv pq wx”

“People study in school” is coded as “pq cd lm yz”

“Students study under trees” is coded as “ lm gh ax ij”

“Teachers teach people well” is coded as “ kl uv cd wx”

(Note: All the given codes are two-letter codes only)

What is the code for the phrase "Teachers study library" in the given coded language?

A) uv lm rt B) lm wx rt C) uv gh rt D) wx uv gh E) Cannot be determined 

Explanation:

Words	Codes
Students	ax
Study	lm
In	pq
Library	rt
Teachers/teach	uv/wx
School	yz
People	cd
Under/trees	gh/ij
Well	kl

Answer: E

Q. 79

Study the following information carefully and answer the given questions.

In a certain code language,

“Students study in library” is coded as “lm pq ax rt ”

“Teachers teach in school” is coded as “yz uv pq wx”

“People study in school” is coded as “pq cd lm yz”

“Students study under trees” is coded as “ lm gh ax ij”

“Teachers teach people well” is coded as “ kl uv cd wx”

(Note: All the given codes are two-letter codes only)

If the phrase “School children and teachers” is coded as “yz dr bu wx” then what is the code for the phrase “School teach students well” in the given coded language?

A) ax pq dr bu

B) yz uv ax kl

C) uv wx ax cd

D) gh ij ax rt

E) yz bu gh ij

Explanation:

Words	Codes
Students	ax
Study	lm
In	pq
Library	rt
Teachers/teach	uv/wx
School	yz
People	cd
Under/trees	gh/ij
Well	kl

Answer: B

Q. 80

Study the following information carefully and answer the given questions.

In a certain code language,

“Students study in library” is coded as **“lm pq ax rt ”****“Teachers teach in school”** is coded as **“yz uv pq wx”****“People study in school”** is coded as **“pq cd lm yz”****“Students study under trees”** is coded as **“ lm gh ax ij”****“Teachers teach people well”** is coded as **“ kl uv cd wx”****(Note: All the given codes are two-letter codes only)****Which of the following words is coded as “rt” in the given coded language?**A) Library B) In C) School D) Study E) Teachers **Explanation:**

Words	Codes
Students	ax
Study	lm
In	pq
Library	rt
Teachers/teach	uv/wx
School	yz
People	cd
Under/trees	gh/ij
Well	kl

Answer: A

Q. 81

Study the following information carefully and answer the given questions.

In a certain code language,

“Students study in library” is coded as “lm pq ax rt ”

“Teachers teach in school” is coded as “yz uv pq wx”

“People study in school” is coded as “pq cd lm yz”

“Students study under trees” is coded as “ lm gh ax ij”

“Teachers teach people well” is coded as “ kl uv cd wx”

(Note: All the given codes are two-letter codes only)

Which of the following is the possible code for the phrase ‘Under teachers’ in the given coded language?

A) gh kl B) uv yz C) wx gh D) cd kl E) uv wx 

Explanation:

Words	Codes
Students	ax
Study	lm
In	pq
Library	rt
Teachers/teach	uv/wx
School	yz
People	cd
Under/trees	gh/ij
Well	kl

Answer: C

Q. 82

Study the following information carefully and answer the given questions.

Seven friends, A, B, C, D, E, F and G have different weights.

E is heavier than B but lighter than F. F is heavier than A but not heavier than C. G is heavier than D and B, who is not the lightest person. As many persons are lighter than G as heavier than A. E is heavier than G. The weight of C is 120kg, which is 27kg more than A. A is 43kg heavier than D.

If the weight of E is 84kg, which is 14kg less than that of F, then what will be the total sum weight of F, A and C?

- A) 351 kg 
- B) 250 kg 
- C) 311 kg 
- D) 420 kg 
- E) 295 kg 

Final arrangement :

C(120kg) > F > A(93kg) > E > G > B > D(50kg)

We have,

- E is heavier than B but lighter than F.
- F is heavier than A but not heavier than C.

$F > E > B$ and $C > F > A$

Again, we have,

- G is heavier than D and B, who is not the lightest.
- As many persons are lighter than G as are heavier than A.
- E is heavier than G.

Explanation:

$C > F > A > E > G > B > D$

Again, we have,

- The weight of C is 120kg, which is 27kg more than A.
- A is 43kg heavier than D.

From the above conditions, we get the final order,

C(120kg) > F > A(93kg) > E > G > B > D(50kg)

Answer: C

If the weight of E is 84kg, which is 14kg less than that of F,

Then the weight of F = 84kg + 14kg = 98kg

The total sum weight of F, A and C = 98kg + 93kg + 120kg = 311kg

Q. 83

Study the following information carefully and answer the given questions.

Seven friends, A, B, C, D, E, F and G have different weights.

E is heavier than B but lighter than F. F is heavier than A but not heavier than C. G is heavier than D and B, who is not the lightest person. As many persons are lighter than G as heavier than A. E is heavier than G. The weight of C is 120kg, which is 27kg more than A. A is 43kg heavier than D.

The difference between the weight of A and F is 7kg and the weight of F is 31kg more than B, then what is the difference between the weight of B and A?

A) 24 kg 

B) 46 kg 

C) 18 kg 

D) 29 kg 

E) 64 kg 

Final arrangement :

C(120kg) > F > A(93kg) > E > G > B > D(50kg)

We have,

- E is heavier than B but lighter than F.
- F is heavier than A but not heavier than C.

$F > E > B$ and $C > F > A$

Again, we have,

- G is heavier than D and B, who is not the lightest.
- As many persons are lighter than G as are heavier than A.
- E is heavier than G.

$C > F > A > E > G > B > D$

Again, we have,

- The weight of C is 120kg, which is 27kg more than A.
- A is 43kg heavier than D.

From the above conditions, we get the final order,

C(120kg) > F > A(93kg) > E > G > B > D(50kg)

Answer: A

The difference between the weight of A and F is 7kg. Since A = 93kg and the difference is 7kg, F = 100kg.

The weight of F is 31kg more than B, so the weight of B = 100 - 31 = 69kg.

The difference of the weight of B and A = 93kg - 69kg = 24kg

Explanation:

Q. 84

Study the following information carefully and answer the given questions.

Seven friends, A, B, C, D, E, F and G have different weights.

E is heavier than B but lighter than F. F is heavier than A but not heavier than C. G is heavier than D and B, who is not the lightest person. As many persons are lighter than G as heavier than A. E is heavier than G. The weight of C is 120kg, which is 27kg more than A. A is 43kg heavier than D.

How many persons are heavier than G?

- A) One 
- B) Two 
- C) Three 
- D) More than three 
- E) None 

Final arrangement :

C(120kg) > F > A(93kg) > E > G > B > D(50kg)

We have,

- E is heavier than B but lighter than F.
- F is heavier than A but not heavier than C.

$F > E > B$ and $C > F > A$

Again, we have,

- G is heavier than D and B, who is not the lightest.
- As many persons are lighter than G as are heavier than A.
- E is heavier than G.

$C > F > A > E > G > B > D$

Again, we have,

- The weight of C is 120kg, which is 27kg more than A.
- A is 43kg heavier than D.

From the above conditions, we get the final order,

C(120kg) > F > A(93kg) > E > G > B > D(50kg)

Answer: D

Explanation:

Q. 85

Study the following information carefully and answer the questions given below:

Nine persons - A, B, C, D, E, F, G, H and I live on nine different floors of a nine-storeyed building where the lowermost floor is numbered one, the one above that is numbered two and so on till the topmost floor is numbered nine. Only one person lives on each floor.

Only four persons live between F and C, who doesn't live on an odd numbered floor. I live three floors below C. The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D. Only one person lives between H and B, who doesn't live adjacent to E. G doesn't live below B.

Who among the following person lives above D?

- I). The one who lives two floors above I.
- II). The one who lives on fifth floor
- III). The one who lives three floors above B

A) Only III

B) Only I and II

C) Only I and III

D) Only I

E) All I, II and III

Explanation:**Final arrangement:**

Floors	Persons
9	G
8	C
7	A
6	D
5	I
4	B
3	F
2	H
1	E

We have,

- Only four persons live between F and C, who doesn't live on an odd numbered floor.
- I live three floors below C.

From the above conditions, there are three possibilities.

Floors	Case-1	Case-2	Case-3
	Persons	Persons	Persons
9	F		
8			C
7			
6		C	
5			I
4	C		
3		I	F
2			
1	I	F	

Again, we have,

- The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D.

From the above conditions, we have two more possibilities. I.e Case -1a and Case-3a then case-2 get eliminated because, the number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D, which is not satisfied.

Floors	Case-1	Case-1a	Case-2	Case-3	Case-3a
	Persons	Persons	Persons	Persons	Persons
9	F	F			
8				C	C
7					A
6		A	C	E	D
5	E	D		I	I
4	C	C			
3	A		I	F	F
2	D	E		A	
1	I	I	F	D	E

Again, we have

- Only one person lives between H and B, who doesn't live adjacent to E.
- G doesn't live below B.

From the above conditions case-1a gets eliminated because Only one person lives between H and B, who doesn't live adjacent to E, which is not satisfied then case-1 and case-3 get eliminated because G doesn't live below B, which is not satisfied. Hence case-3a shows the final arrangement.

Floors	Case-1	Case-1a	Case- 3	Case- 3a
	Persons	Persons	Persons	Persons
9	F	F	B	G
8	B		C	C
7	G		H	A
6	H	A	E	D
5	E	D	I	I
4	C	C	G	B
3	A		F	F
2	D	E	A	H
1	I	I	D	E

Answer: C

Q. 86

Study the following information carefully and answer the questions given below:

Nine persons - A, B, C, D, E, F, G, H and I live on nine different floors of a nine-storeyed building where the lowermost floor is numbered one, the one above that is numbered two and so on till the topmost floor is numbered nine. Only one person lives on each floor.

Only four persons live between F and C, who doesn't live on an odd numbered floor. I live three floors below C. The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D. Only one person lives between H and B, who doesn't live adjacent to E. G doesn't live below B.

The number of persons living between B and E is the same as the number of persons living between ____ and ____.

A) F and A B) H and I C) G and C D) E and D E) B and F 

Explanation:**Final arrangement:**

Floors	Persons
9	G
8	C
7	A
6	D
5	I
4	B
3	F
2	H
1	E

We have,

- Only four persons live between F and C, who doesn't live on an odd numbered floor.
- I live three floors below C.

From the above conditions, there are three possibilities.

Floors	Case-1	Case-2	Case-3
	Persons	Persons	Persons
9	F		
8			C
7			
6		C	
5			I
4	C		
3		I	F
2			
1	I	F	

Again, we have,

- The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D.

From the above conditions, we have two more possibilities. I.e Case -1a and Case-3a then case-2 get eliminated because, the number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D, which is not satisfied.

Floors	Case-1	Case-1a	Case-2	Case-3	Case-3a
	Persons	Persons	Persons	Persons	Persons
9	F	F			
8				C	C
7					A
6		A	C	E	D
5	E	D		I	I
4	C	C			
3	A		I	F	F
2	D	E		A	
1	I	I	F	D	E

Again, we have

- Only one person lives between H and B, who doesn't live adjacent to E.
- G doesn't live below B.

From the above conditions case-1a gets eliminated because Only one person lives between H and B, who doesn't live adjacent to E, which is not satisfied then case-1 and case-3 get eliminated because G doesn't live below B, which is not satisfied. Hence case-3a shows the final arrangement.

Floors	Case-1	Case-1a	Case- 3	Case- 3a
	Persons	Persons	Persons	Persons
9	F	F	B	G
8	B		C	C
7	G		H	A
6	H	A	E	D
5	E	D	I	I
4	C	C	G	B
3	A		F	F
2	D	E	A	H
1	I	I	D	E

Answer: B

Q. 87

Study the following information carefully and answer the questions given below:

Nine persons - A, B, C, D, E, F, G, H and I live on nine different floors of a nine-storeyed building where the lowermost floor is numbered one, the one above that is numbered two and so on till the topmost floor is numbered nine. Only one person lives on each floor.

Only four persons live between F and C, who doesn't live on an odd numbered floor. I live three floors below C. The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D. Only one person lives between H and B, who doesn't live adjacent to E. G doesn't live below B.

How many persons live between the one who lives two floors above H and the one who lives three floors below G?

A) Four B) Three C) Two D) One E) More than four 

Explanation:**Final arrangement:**

Floors	Persons
9	G
8	C
7	A
6	D
5	I
4	B
3	F
2	H
1	E

We have,

- Only four persons live between F and C, who doesn't live on an odd numbered floor.
- I live three floors below C.

From the above conditions, there are three possibilities.

Floors	Case-1	Case-2	Case-3
	Persons	Persons	Persons
9	F		
8			C
7			
6		C	
5			I
4	C		
3		I	F
2			
1	I	F	

Again, we have,

- The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D.

From the above conditions, we have two more possibilities. I.e Case -1a and Case-3a then case-2 get eliminated because, the number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D, which is not satisfied.

Floors	Case-1	Case-1a	Case-2	Case-3	Case-3a
	Persons	Persons	Persons	Persons	Persons
9	F	F			
8				C	C
7					A
6		A	C	E	D
5	E	D		I	I
4	C	C			
3	A		I	F	F
2	D	E		A	
1	I	I	F	D	E

Again, we have

- Only one person lives between H and B, who doesn't live adjacent to E.
- G doesn't live below B.

From the above conditions case-1a gets eliminated because Only one person lives between H and B, who doesn't live adjacent to E, which is not satisfied then case-1 and case-3 get eliminated because G doesn't live below B, which is not satisfied. Hence case-3a shows the final arrangement.

Floors	Case-1	Case-1a	Case- 3	Case- 3a
	Persons	Persons	Persons	Persons
9	F	F	B	G
8	B		C	C
7	G		H	A
6	H	A	E	D
5	E	D	I	I
4	C	C	G	B
3	A		F	F
2	D	E	A	H
1	I	I	D	E

Answer: D

Q. 88

Study the following information carefully and answer the questions given below:

Nine persons - A, B, C, D, E, F, G, H and I live on nine different floors of a nine-storeyed building where the lowermost floor is numbered one, the one above that is numbered two and so on till the topmost floor is numbered nine. Only one person lives on each floor.

Only four persons live between F and C, who doesn't live on an odd numbered floor. I live three floors below C. The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D. Only one person lives between H and B, who doesn't live adjacent to E. G doesn't live below B.

If the position of A and I are interchanged similarly the position of F and C are interchanged, then who among the following person lives two floors below A?

- A) C 
- B) G 
- C) F 
- D) I 
- E) H 

Explanation:**Final arrangement:**

Floors	Persons
9	G
8	C
7	A
6	D
5	I
4	B
3	F
2	H
1	E

We have,

- Only four persons live between F and C, who doesn't live on an odd numbered floor.
- I live three floors below C.

From the above conditions, there are three possibilities.

Floors	Case-1	Case-2	Case-3
	Persons	Persons	Persons
9	F		
8			C
7			
6		C	
5			I
4	C		
3		I	F
2			
1	I	F	

Again, we have,

- The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D.

From the above conditions, we have two more possibilities. I.e Case -1a and Case-3a then case-2 get eliminated because, the number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D, which is not satisfied.

Floors	Case-1	Case-1a	Case-2	Case-3	Case-3a
	Persons	Persons	Persons	Persons	Persons
9	F	F			
8				C	C
7					A
6		A	C	E	D
5	E	D		I	I
4	C	C			
3	A		I	F	F
2	D	E		A	
1	I	I	F	D	E

Again, we have

- Only one person lives between H and B, who doesn't live adjacent to E.
- G doesn't live below B.

From the above conditions case-1a gets eliminated because Only one person lives between H and B, who doesn't live adjacent to E, which is not satisfied then case-1 and case-3 get eliminated because G doesn't live below B, which is not satisfied. Hence case-3a shows the final arrangement.

Floors	Case-1	Case-1a	Case- 3	Case- 3a
	Persons	Persons	Persons	Persons
9	F	F	B	G
8	B		C	C
7	G		H	A
6	H	A	E	D
5	E	D	I	I
4	C	C	G	B
3	A		F	F
2	D	E	A	H
1	I	I	D	E

Answer: A

Q. 89

Study the following information carefully and answer the questions given below:

Nine persons - A, B, C, D, E, F, G, H and I live on nine different floors of a nine-storeyed building where the lowermost floor is numbered one, the one above that is numbered two and so on till the topmost floor is numbered nine. Only one person lives on each floor.

Only four persons live between F and C, who doesn't live on an odd numbered floor. I live three floors below C. The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D. Only one person lives between H and B, who doesn't live adjacent to E. G doesn't live below B.

If all the persons are made to live in the alphabetical order from the bottom to top, then how many persons remain unchanged in their position?

- A) One 
- B) Two 
- C) Three 
- D) Four 
- E) No one 

Explanation:**Final arrangement:**

Floors	Persons
9	G
8	C
7	A
6	D
5	I
4	B
3	F
2	H
1	E

We have,

- Only four persons live between F and C, who doesn't live on an odd numbered floor.
- I live three floors below C.

From the above conditions, there are three possibilities.

Floors	Case-1	Case-2	Case-3
	Persons	Persons	Persons
9	F		
8			C
7			
6		C	
5			I
4	C		
3		I	F
2			
1	I	F	

Again, we have,

- The number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D.

From the above conditions, we have two more possibilities. I.e Case -1a and Case-3a then case-2 get eliminated because, the number of persons living above E is **two more** than the number of persons living below A, who lives immediately above D, which is not satisfied.

Floors	Case-1	Case-1a	Case-2	Case-3	Case-3a
	Persons	Persons	Persons	Persons	Persons
9	F	F			
8				C	C
7					A
6		A	C	E	D
5	E	D		I	I
4	C	C			
3	A		I	F	F
2	D	E		A	
1	I	I	F	D	E

Again, we have

- Only one person lives between H and B, who doesn't live adjacent to E.
- G doesn't live below B.

From the above conditions case-1a gets eliminated because Only one person lives between H and B, who doesn't live adjacent to E, which is not satisfied then case-1 and case-3 get eliminated because G doesn't live below B, which is not satisfied. Hence case-3a shows the final arrangement.

Floors	Case-1	Case-1a	Case-3	Case-3a
	Persons	Persons	Persons	Persons
9	F	F	B	G
8	B		C	C
7	G		H	A
6	H	A	E	D
5	E	D	I	I
4	C	C	G	B
3	A		F	F
2	D	E	A	H
1	I	I	D	E

Answer: E

Q. 90

Study the following information carefully and answer the given questions.

How many pairs of letters are there in the word "UNFAZED", each of which has as many letters between them as there are in the English alphabetical series (both forward and backward direction)?

- A) One 
- B) Two 
- C) Three 
- D) Four 
- E) More than four 

Answer: B

Explanation:

UNFAZED

Only two pairs are obtained, i.e., AD and ED.

Q. 91

Study the following information carefully and answer the below questions.

Six persons—K, L, M, N, O, and P went shopping one after another on different occasions. It is assumed that no other persons went shopping other than the given persons. They bought different things viz., dress, shoes, phone, ring, chain, and perfume.

L went three persons before the one who bought a ring. L neither bought perfume nor chain. Three persons went between the one who bought a ring and P, who didn't buy shoes. K went immediately before the one who bought shoes. Two persons went between K and the one who bought the dress. The number of persons going between M and the one who bought a dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume. N didn't go after M. The one who bought a phone didn't go before the one who bought a chain. O didn't go after the one who bought the dress.

Who among the following person went shopping three persons after the one who bought a phone?

- A) O 
- B) The one who bought shoes 
- C) The one who bought immediately after N 
- D) L 
- E) P 

Explanation:**Final arrangement:**

	Persons
1	P (chain)
2	L (phone)
3	K (perfume)
4	N (shoes)
5	M (ring)
6	O (dress)

We have,

- L went three persons before the one who bought a ring.
- L neither bought perfume nor chain.
- Three persons went between the one who bought a ring and P, who didn't buy shoes.

From the above conditions, there are two possibilities.

	Case-1	Case-2
	Persons	Persons
1	P	
2	L	P
3		L
4		
5	(ring)	
6		(ring)

Again, we have,

- K went immediately before the one who bought shoes.
- Two persons went between K and the one who bought the dress.

From the above conditions, there are three possibilities.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P	P	(dress)
2	L (phone)	L (dress)	P
3	K		L (phone)
4	(shoes)		K
5	(ring)	K (ring)	(shoes)
6	(dress)	(shoes)	(ring)

Again, We have,

- The number of persons going between M and the one who bought the dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume.
- N didn't go after M.
- The one who bought a phone didn't go before the one who bought a chain.
- O didn't go after the one who bought the dress.

From the above conditions, case-1a and case-2 get eliminated because O didn't go after the one who bought the dress, which is not satisfied.

Hence, case-1 shows the final arrangement.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P (chain)	P (perfume)	N (dress)
2	L (phone)	L (dress)	P (chain)
3	K (perfume)	N (chain)	L (phone)
4	N (shoes)	M (phone)	K (perfume)
5	M (ring)	K (ring)	M (shoes)
6	O (dress)	O (shoes)	O (ring)

Answer: C

Q. 92

Study the following information carefully and answer the below questions.

Six persons—K, L, M, N, O, and P went shopping one after another on different occasions. It is assumed that no other persons went shopping other than the given persons. They bought different things viz., dress, shoes, phone, ring, chain, and perfume.

L went three persons before the one who bought a ring. L neither bought perfume nor chain. Three persons went between the one who bought a ring and P, who didn't buy shoes. K went immediately before the one who bought shoes. Two persons went between K and the one who bought the dress. The number of persons going between M and the one who bought a dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume. N didn't go after M. The one who bought a phone didn't go before the one who bought a chain. O didn't go after the one who bought the dress.

How many persons went shopping after the one who bought immediately after K?A) One B) None, the one who bought immediately after K, is the last person C) Three D) More than three E) As many persons went before the one who bought perfume 

Explanation:**Final arrangement:**

	Persons
1	P (chain)
2	L (phone)
3	K (perfume)
4	N (shoes)
5	M (ring)
6	O (dress)

We have,

- L went three persons before the one who bought a ring.
- L neither bought perfume nor chain.
- Three persons went between the one who bought a ring and P, who didn't buy shoes.

From the above conditions, there are two possibilities.

	Case-1	Case-2
	Persons	Persons
1	P	
2	L	P
3		L
4		
5	(ring)	
6		(ring)

Again, we have,

- K went immediately before the one who bought shoes.
- Two persons went between K and the one who bought the dress.

From the above conditions, there are three possibilities.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P	P	(dress)
2	L (phone)	L (dress)	P
3	K		L (phone)
4	(shoes)		K
5	(ring)	K (ring)	(shoes)
6	(dress)	(shoes)	(ring)

Again, We have,

- The number of persons going between M and the one who bought the dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume.
- N didn't go after M.
- The one who bought a phone didn't go before the one who bought a chain.
- O didn't go after the one who bought the dress.

From the above conditions, case-1a and case-2 get eliminated because O didn't go after the one who bought the dress, which is not satisfied.

Hence, case-1 shows the final arrangement.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P (chain)	P (perfume)	N (dress)
2	L (phone)	L (dress)	P (chain)
3	K (perfume)	N (chain)	L (phone)
4	N (shoes)	M (phone)	K (perfume)
5	M (ring)	K (ring)	M (shoes)
6	O (dress)	O (shoes)	O (ring)

Answer: E

Q. 93

Study the following information carefully and answer the below questions.

Six persons—K, L, M, N, O, and P went shopping one after another on different occasions. It is assumed that no other persons went shopping other than the given persons. They bought different things viz., dress, shoes, phone, ring, chain, and perfume.

L went three persons before the one who bought a ring. L neither bought perfume nor chain. Three persons went between the one who bought a ring and P, who didn't buy shoes. K went immediately before the one who bought shoes. Two persons went between K and the one who bought the dress. The number of persons going between M and the one who bought a dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume. N didn't go after M. The one who bought a phone didn't go before the one who bought a chain. O didn't go after the one who bought the dress.

If the chain is related to the phone and the shoes is related to the ring in a certain way, then which of the following is related to the dress?

- A) Perfume 
- B) Ring 
- C) The one who bought perfume 
- D) Phone 
- E) None of the above 

Explanation:**Final arrangement:**

	Persons
1	P (chain)
2	L (phone)
3	K (perfume)
4	N (shoes)
5	M (ring)
6	O (dress)

We have,

- L went three persons before the one who bought a ring.
- L neither bought perfume nor chain.
- Three persons went between the one who bought a ring and P, who didn't buy shoes.

From the above conditions, there are two possibilities.

	Case-1	Case-2
	Persons	Persons
1	P	
2	L	P
3		L
4		
5	(ring)	
6		(ring)

Again, we have,

- K went immediately before the one who bought shoes.
- Two persons went between K and the one who bought the dress.

From the above conditions, there are three possibilities.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P	P	(dress)
2	L (phone)	L (dress)	P
3	K		L (phone)
4	(shoes)		K
5	(ring)	K (ring)	(shoes)
6	(dress)	(shoes)	(ring)

Again, We have,

- The number of persons going between M and the one who bought the dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume.
- N didn't go after M.
- The one who bought a phone didn't go before the one who bought a chain.
- O didn't go after the one who bought the dress.

From the above conditions, case-1a and case-2 get eliminated because O didn't go after the one who bought the dress, which is not satisfied.

Hence, case-1 shows the final arrangement.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P (chain)	P (perfume)	N (dress)
2	L (phone)	L (dress)	P (chain)
3	K (perfume)	N (chain)	L (phone)
4	N (shoes)	M (phone)	K (perfume)
5	M (ring)	K (ring)	M (shoes)
6	O (dress)	O (shoes)	O (ring)

Answer: B

Q. 94

Study the following information carefully and answer the below questions.

Six persons—K, L, M, N, O, and P went shopping one after another on different occasions. It is assumed that no other persons went shopping other than the given persons. They bought different things viz., dress, shoes, phone, ring, chain, and perfume.

L went three persons before the one who bought a ring. L neither bought perfume nor chain. Three persons went between the one who bought a ring and P, who didn't buy shoes. K went immediately before the one who bought shoes. Two persons went between K and the one who bought the dress. The number of persons going between M and the one who bought a dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume. N didn't go after M. The one who bought a phone didn't go before the one who bought a chain. O didn't go after the one who bought the dress.

The number of things bought before L is _____ the number of things bought after the one who bought perfume.

- A) Two less than 
- B) One less than 
- C) One more than 
- D) Three more than 
- E) Two more than 

Explanation:**Final arrangement:**

	Persons
1	P (chain)
2	L (phone)
3	K (perfume)
4	N (shoes)
5	M (ring)
6	O (dress)

We have,

- L went three persons before the one who bought a ring.
- L neither bought perfume nor chain.
- Three persons went between the one who bought a ring and P, who didn't buy shoes.

From the above conditions, there are two possibilities.

	Case-1	Case-2
	Persons	Persons
1	P	
2	L	P
3		L
4		
5	(ring)	
6		(ring)

Again, we have,

- K went immediately before the one who bought shoes.
- Two persons went between K and the one who bought the dress.

From the above conditions, there are three possibilities.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P	P	(dress)
2	L (phone)	L (dress)	P
3	K		L (phone)
4	(shoes)		K
5	(ring)	K (ring)	(shoes)
6	(dress)	(shoes)	(ring)

Again, We have,

- The number of persons going between M and the one who bought the dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume.
- N didn't go after M.
- The one who bought a phone didn't go before the one who bought a chain.
- O didn't go after the one who bought the dress.

From the above conditions, case-1a and case-2 get eliminated because O didn't go after the one who bought the dress, which is not satisfied.

Hence, case-1 shows the final arrangement.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P (chain)	P (perfume)	N (dress)
2	L (phone)	L (dress)	P (chain)
3	K (perfume)	N (chain)	L (phone)
4	N (shoes)	M (phone)	K (perfume)
5	M (ring)	K (ring)	M (shoes)
6	O (dress)	O (shoes)	O (ring)

Answer: A

Q. 95

Study the following information carefully and answer the below questions.

Six persons—K, L, M, N, O, and P went shopping one after another on different occasions. It is assumed that no other persons went shopping other than the given persons. They bought different things viz., dress, shoes, phone, ring, chain, and perfume.

L went three persons before the one who bought a ring. L neither bought perfume nor chain. Three persons went between the one who bought a ring and P, who didn't buy shoes. K went immediately before the one who bought shoes. Two persons went between K and the one who bought the dress. The number of persons going between M and the one who bought a dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume. N didn't go after M. The one who bought a phone didn't go before the one who bought a chain. O didn't go after the one who bought the dress.

Which of the following statement(s) is/are TRUE as per the final arrangement?**I). P bought immediately before the one who bought a phone****II). K bought a perfume****III). L went shopping three persons before O****A) Only I and III****B) Only II and III****C) Only III****D) Only I and II****E) All I, II, and III**

Explanation:**Final arrangement:**

	Persons
1	P (chain)
2	L (phone)
3	K (perfume)
4	N (shoes)
5	M (ring)
6	O (dress)

We have,

- L went three persons before the one who bought a ring.
- L neither bought perfume nor chain.
- Three persons went between the one who bought a ring and P, who didn't buy shoes.

From the above conditions, there are two possibilities.

	Case-1	Case-2
	Persons	Persons
1	P	
2	L	P
3		L
4		
5	(ring)	
6		(ring)

Again, we have,

- K went immediately before the one who bought shoes.
- Two persons went between K and the one who bought the dress.

From the above conditions, there are three possibilities.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P	P	(dress)
2	L (phone)	L (dress)	P
3	K		L (phone)
4	(shoes)		K
5	(ring)	K (ring)	(shoes)
6	(dress)	(shoes)	(ring)

Again, We have,

- The number of persons going between M and the one who bought the dress is **two less than** the number of persons going after N, who neither bought a phone nor a perfume.
- N didn't go after M.
- The one who bought a phone didn't go before the one who bought a chain.
- O didn't go after the one who bought the dress.

From the above conditions, case-1a and case-2 get eliminated because O didn't go after the one who bought the dress, which is not satisfied.

Hence, case-1 shows the final arrangement.

	Case-1	Case-1a	Case-2
	Persons	Persons	Persons
1	P (chain)	P (perfume)	N (dress)
2	L (phone)	L (dress)	P (chain)
3	K (perfume)	N (chain)	L (phone)
4	N (shoes)	M (phone)	K (perfume)
5	M (ring)	K (ring)	M (shoes)
6	O (dress)	O (shoes)	O (ring)

Answer: D

Q. 96

Study the following information carefully and answer the given questions.

Six persons A, B, C, D, E and F are sitting in a straight line facing north. Only one person sits between D and A, who sits at one of the ends. B sits to the immediate right of D. F sits second to the left of B. As many persons sit to the left of F as to the right of E.

What is the position of C with respect to D?

A) Fifth to the left

B) Fifth to the right

C) Second to the left

D) Third to the right

E) Third to the left

Final arrangement:

We have,

- Only one person sits between D and A, who sits at one of the ends.
- B sits to the immediate right of D.

From the above conditions, there are two possibilities.

**Explanation:**

Again, we have,

- F sits second to the left of B.
- As many persons sit to the left of F as to the right of E.

From the above conditions, Case 2 gets eliminated because the condition as many persons sit to the left of F as to the right of E, which is not satisfied. Hence, Case 1 is the final arrangement. The position of C is third to the right of D as per the final arrangement.

Answer: D

Q. 97

Study the following information carefully and answer the given questions.

If in the given number "4596293187", all the prime digits are removed, then all the digits are arranged in descending order from left to right. Then, what is the product of the third digit from the left end and second digit from the right end after the arrangement?

A) 32 B) 4 C) 72 D) 36 E) 9 **Answer: A**

If in the given number "4596293187", all the prime numbers are removed then,

4 5 9 6 2 9 3 1 8 7

4 9 6 9 1 8

Explanation:

All the numbers are arranged in descending order from left to right then,

9 9 8 6 4 1

The product of the digit which is third from the left end i.e 8 and second from the right end i.e., 4, $8 \times 4 = 32$.

Q. 98

Study the following information carefully and answer the given questions.

A certain number of persons are sitting in a linear row and facing the north.

Four persons sit between C and D. E sits second to the right of D. Nine persons sit between B and C, who sits to the left of B. The number of persons sitting between E and F is **one more than** the person sits between B and F, who does not sit to the right of B. B sits second from one of the ends. As many persons sit to the left of C as to the right of F. A sits at one of the ends but not an immediate neighbor of B. An even number of persons sit to the left of B.

Which of the following statement(s) is/are TRUE as per the final arrangement?

- A) A sit third to the left of D 
- B) F sits eighth from the left end 
- C) F sits ninth to the right of C 
- D) Odd number of persons sit to the left of C 
- E) B sits second to the left of F 

Final arrangement

We have,

- Four persons sit between C and D.
- E sits second to the right of D.

From the above conditions, there are two possibilities.

Again, we have,

- Nine persons sit between B and C, who sits to the left of B.
- The number of persons sitting between E and F is **one more than** the persons sits between B and F, who does not sit to the right of B.
- B sits second from one of the ends.

Explanation:

Again, we have,

- As many persons sit to the left of C as to the right of F.
- A sits at one of the ends but not an immediate neighbor of B.
- An even number of persons sit to the left of B.

From the above conditions, Case 2 gets eliminated because the condition, an even number of persons sit to the left of B, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: C

Q. 99

Study the following information carefully and answer the given questions.

A certain number of persons are sitting in a linear row and facing the north.

Four persons sit between C and D. E sits second to the right of D. Nine persons sit between B and C, who sits to the left of B. The number of persons sitting between E and F is **one more than** the person sits between B and F, who does not sit to the right of B. B sits second from one of the ends. As many persons sit to the left of C as to the right of F. A sits at one of the ends but not an immediate neighbor of B. An even number of persons sit to the left of B.

What is the position of A with respect to F?

A) Thirteenth to the left

B) Thirteenth to the right

C) Eleventh to the right

D) Eleventh to the left

E) Seventh to the left

Final arrangement

We have,

- Four persons sit between C and D.
- E sits second to the right of D.

From the above conditions, there are two possibilities.

Again, we have,

- Nine persons sit between B and C, who sits to the left of B.
- The number of persons sitting between E and F is **one more than** the persons sits between B and F, who does not sit to the right of B.
- B sits second from one of the ends.

Explanation:

Again, we have,

- As many persons sit to the left of C as to the right of F.
- A sits at one of the ends but not an immediate neighbor of B.
- An even number of persons sit to the left of B.

From the above conditions, Case 2 gets eliminated because the condition, an even number of persons sit to the left of B, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: D

Q. 100

Study the following information carefully and answer the given questions.

A certain number of persons are sitting in a linear row and facing the north.

Four persons sit between C and D. E sits second to the right of D. Nine persons sit between B and C, who sits to the left of B. The number of persons sitting between E and F is **one more than** the person sits between B and F, who does not sit to the right of B. B sits second from one of the ends. As many persons sit to the left of C as to the right of F. A sits at one of the ends but not an immediate neighbor of B. An even number of persons sit to the left of B.

Which of the following persons sits ninth to the left of E?

- A) A 
- B) The one who sits fifth to the right of A 
- C) F 
- D) C 
- E) The one who sits immediate right of C 

Final arrangement

We have,

- Four persons sit between C and D.
- E sits second to the right of D.

From the above conditions, there are two possibilities.

Again, we have,

- Nine persons sit between B and C, who sits to the left of B.
- The number of persons sitting between E and F is **one more than** the persons sits between B and F, who does not sit to the right of B.
- B sits second from one of the ends.

Explanation:

Again, we have,

- As many persons sit to the left of C as to the right of F.
- A sits at one of the ends but not an immediate neighbor of B.
- An even number of persons sit to the left of B.

From the above conditions, Case 2 gets eliminated because the condition, an even number of persons sit to the left of B, which is not satisfied. Hence, Case 1 is the final arrangement.

Answer: A
