

Guidely IBPS PO Mock 1, August 11, 2026

English Language

Q. 1

In the question below, a sentence has been given with four highlighted words. These highlighted words may not be in their correct positions. Find out the correct rearrangement of the highlighted words to make the sentence grammatically correct and contextually meaningful. If all the words are in their correct position, then select option 'No rearrangement required' as answer.

Despite the global (A) resilience slowdown, the domestic service sector (B) patterns to show remarkable (C) continues and steady growth (D) economic annually.

A) BCAD B) DCBA C) BACD D) DCAB E) No rearrangement required **Answer: D**

"Despite the global economic slowdown" → so D (economic) should replace A (resilience).

"the domestic service sector continues to show" → C (continues) should go here.

"...remarkable resilience and steady growth" → A (resilience) goes here.

"...steady growth patterns annually" → B (patterns) goes here.

Correct order: DCAB

Corrected sentence: Despite the global **economic** slowdown, the domestic service sector **continues** to show remarkable **resilience** and steady growth **patterns** annually.

Explanation:

Q. 2

The following question has two blanks, each blank indicating that something has been omitted. Choose the set of words for each blank that best fits in the context of the sentence.

High inflation has _____ the purchasing power of the middle class, making it _____ for them to save for the future.

A) enhanced, easy 

B) dampened, necessary 

C) boosted, impossible 

D) crippled, simple 

E) eroded, difficult 

Answer: E

eroded, difficult

a) enhanced, easy

Incorrect — Enhanced means increased. High inflation does not increase purchasing power; it reduces it.

b) dampened, necessary

Incorrect — Dampened (weakened) fits partially, but necessary is illogical here; it doesn't make saving easier or harder.

c) boosted, impossible

Incorrect — Boosted means increased, which is the opposite effect of inflation.

d) crippled, simple

Incorrect — Crippled is strong but works; however, simple is the opposite of the intended meaning.

e) eroded, difficult

Correct — Eroded (gradually reduced) fits the impact of high inflation on purchasing power. Difficult logically follows, as saving becomes harder.

Complete sentence: High inflation has **eroded** the purchasing power of the middle class, making it **difficult** for them to save for the future.

Explanation:

Q. 3	In the question below, a sentence has been given with four highlighted words. These highlighted words may not be in their correct positions. Find out the correct rearrangement of the highlighted words to make the sentence grammatically correct and contextually meaningful. If all the words are in their correct position, then select option 'No rearrangement required' as answer. Transparency in corporate (A) protect is essential to (B) maintain the interests of (C) governance shareholders and (D) minority high ethical standards. A) CADB  B) DACB  C) CBAD  D) BDCA  E) No rearrangement required 
Explanation:	Answer: A "Transparency in corporate governance is essential..." - C goes in place of A. "...to protect the interests of..." - A (protect) goes in place of B. "...of minority shareholders..." - D (minority) goes in place of C. "...and maintain high ethical standards." - B (maintain) goes in place of D. Correct order: CADB Corrected sentence: Transparency in corporate governance is essential to protect the interests of minority shareholders and maintain high ethical standards.

Q. 4	In the following questions, the sentence is split into five parts and named A, B, C, D and E. These five parts are not given in their proper order. Rearrange the parts of the sentence to make a grammatically correct and contextually meaningful statement. A. the human brain's plasticity allows B. neuroscience research suggests that C. remains sufficiently stimulating D. for the continuous acquisition of new skills, E. provided that the cognitive environment A) D B E A C  B) A D B C E  C) B A D E C  D) B D A E C  E) No arrangement required 
Explanation:	Answer: C B: Introduces the subject ("Neuroscience research suggests that"), which naturally sets up a clause explaining what is being suggested. A: Provides the specific subject of the research ("the human brain's plasticity allows"). D: The verb "allows" in part A requires a prepositional phrase to complete the thought—allowing for something ("for the continuous acquisition of new skills"). E: Introduces a conditional clause ("provided that"), which explains the requirement for this plasticity to function. C: Completes the conditional clause by describing the state of the environment ("remains sufficiently stimulating"). After arrangement: Neuroscience research suggests that the human brain's plasticity allows for the continuous acquisition of new skills, provided that the cognitive environment remains sufficiently stimulating.

Q. 5

The following question has two blanks, each blank indicating that something has been omitted. Choose the set of words for each blank that best fits in the context of the sentence.

The diplomat's _____ response helped to _____ the tension between the two neighboring nations.

A) aggressive, escalate

B) measured, alleviate

C) prompt, aggravate

D) vague, resolve

E) diplomatic, sustain

Answer: B

measured, alleviate

a) aggressive, escalate

Incorrect — An aggressive response would likely increase tension, not reduce it. Contradicts the sentence.

b) measured, alleviate

Correct — A measured (calm and controlled) response would help to alleviate (reduce) tension. Logical, contextually sound, and grammatically correct.

c) prompt, aggravate

Incorrect — A prompt response doesn't imply reducing tension, and aggravate would increase tension, which is opposite of the intended meaning.

d) vague, resolve

Incorrect — A vague response would likely confuse or worsen matters, not help resolve tension effectively.

e) diplomatic, sustain

Incorrect — While diplomatic is positive, sustain tension is the opposite of the intended meaning (we want tension reduced).

Complete sentence: The diplomat's **measured** response helped to **alleviate** the tension between the two neighboring nations.

Explanation:

Q. 6

In the following questions, the sentence is split into five parts and named A, B, C, D and E. These five parts are not given in their proper order. Rearrange the parts of the sentence to make a grammatically correct and contextually meaningful statement.

A. cloud computing architecture has

B. rapidly without the burden of

C. transformed the corporate landscape by

D. maintaining physical server infrastructure

E. allowing businesses to scale their operations

A) E B C A D

B) A C E B D

C) B E D C A

D) C D E A B

E) No arrangement required

Answer: B

A: "Cloud computing architecture has..." establishes the topic and the auxiliary verb "has," which requires a past participle.

C: "...transformed the corporate landscape by" provides that past participle ("transformed") and introduces the method of transformation with "by."

E: "allowing businesses to scale their operations" follows the preposition "by" (verb+ing) and explains the primary benefit.

B: "rapidly without the burden of" describes how they scale (rapidly) and introduces a specific cost-saving condition.

D: "maintaining physical server infrastructure" completes the phrase "burden of," identifying exactly what is being avoided.

After arrangement: Cloud computing architecture has transformed the corporate landscape by allowing businesses to scale their operations rapidly without the burden of maintaining physical server infrastructure.

Explanation:

Q. 7

The following question has two blanks, each blank indicating that something has been omitted. Choose the set of words for each blank that best fits in the context of the sentence.

Technological advancements have _____ productivity across industries, but they have also _____ the demand for low-skilled labor.

A) augmented, curtailed

B) stagnated, increased

C) impeded, stabilized

D) enhanced, amplified

E) accelerated, sustained

Answer: A

augmented, curtailed

a) augmented, curtailed

Correct — Augmented means increased productivity, and curtailed means reduced demand for low-skilled labor. Fits both logically and grammatically.

b) stagnated, increased

Incorrect — Stagnated means productivity did not grow, which contradicts the effect of technological advancements. Increased demand for low-skilled labor is also opposite to the expected effect.

c) impeded, stabilized

Incorrect — Impeded means slowed or hindered, which is the opposite of the impact of technological advancements. Stabilized does not indicate the expected reduction in low-skilled labor demand.

d) enhanced, amplified

Incorrect — Enhanced productivity works, but amplified demand implies an increase, which is the opposite of what technological advancements usually do for low-skilled labor.

e) accelerated, sustained

Incorrect — Accelerated productivity is fine, but sustained demand implies it remained unchanged, not reduced.

Complete Sentence: Technological advancements have **augmented** productivity across industries, but they have also **curtailed** the demand for low-skilled labor.

Explanation:

Q. 8

In the following questions, the sentence is split into five parts and named A, B, C, D and E. These five parts are not given in their proper order. Rearrange the parts of the sentence to make a grammatically correct and contextually meaningful statement.

A. goals between the two entities

B. of organizational cultures and

C. the alignment of long-term strategic

D. heavily on the seamless integration

E. the success of a corporate merger depends

A) E D B C A

B) EA CB D

C) C AD BE

D) D C A E B

E) No arrangement required

Explanation:

Answer: A

E: Identifies the core topic ("The success of a corporate merger depends"). The verb "depends" naturally looks for the preposition "on."

D: Connects to the verb ("...heavily on the seamless integration"). The word "integration" requires a "what," leading us to the next part.

B: Identifies what is being integrated ("of organizational cultures and"). The "and" signals that a second requirement is coming.

C: Introduces the second factor ("the alignment of long-term strategic").

A: Completes the thought ("goals between the two entities").

After arrangement: The success of a corporate merger depends heavily on the seamless integration of organizational cultures and the alignment of long-term strategic goals between the two entities.

Q. 9

In the following questions, the sentence is split into five parts and named A, B, C, D and E. These five parts are not given in their proper order. Rearrange the parts of the sentence to make a grammatically correct and contextually meaningful statement.

A. by traditional commercial banks

B. entrepreneurs who are often overlooked

C. pivotal role in rural development by

D. microfinance institutions play a

E. providing accessible credit to small-scale

A) A E C D B

B) D C E B A

C) C D A B E

D) D B C A E

E) No arrangement required

Answer: B

D C E B A

D: Starts the sentence by identifying the main actor ("Microfinance institutions play a...").

C: Completes the opening phrase ("...pivotal role in rural development") and introduces the method using the preposition "by."

E: Describes what the institutions are doing ("providing accessible credit to small-scale...").

B: Identifies who receives the credit ("...entrepreneurs who are often overlooked").

A: Completes the passive voice construction ("overlooked by...") and provides the final context ("...traditional commercial banks").

After arrangement: Microfinance institutions play a pivotal role in rural development by providing accessible credit to small-scale entrepreneurs who are often overlooked by traditional commercial banks.

Explanation:

Q. 10	In the question below, a sentence has been given with four highlighted words. These highlighted words may not be in their correct positions. Find out the correct rearrangement of the highlighted words to make the sentence grammatically correct and contextually meaningful. If all the words are in their correct position, then select option 'No rearrangement required' as answer. Many retail investors are (A) shifting their focus from (B) traditional fixed deposits to more (C) lucrative equity-linked savings (D) schemes. A) BDCA  B) CADB  C) ADCB  D) DBAC  E) No rearrangement required 
Explanation:	Answer: E No rearrangement required "Many retail investors are shifting their focus..." - grammatically correct. "...from traditional fixed deposits..." - correct. "...to more lucrative equity-linked savings schemes..." - correct. "...savings schemes ." - correct at the end. All words are in their correct positions and the sentence reads perfectly.

Q. 11

Given below are three statements, some of which may be incorrect. Identify the correct statement(s) and mark it as your answer.

I. Interest rate changes influence borrowing costs, shaping decisions made by consumers and businesses alike.

II. Warehouse robots now pick and pack orders faster than most human workers ever could.

III. DNA carries genetic instructions passed out generations, shaping traits in every living organism.

A) Only II 

B) Only I 

C) Both II & III 

D) Both I & II 

E) All I, II & III 

Answer: D

Both I & II

Statement I is correct: Interest rate changes influence borrowing costs, affecting financial decisions made by consumers and businesses.

Statement II is correct: Warehouse robots can complete repetitive tasks such as picking and packing orders faster than most human workers.

Statement III is incorrect: The phrase "passed out generations" is incorrect. The correct phrase is "passed down through generations," which refers to the transfer of genetic information from one generation to the next.

Corrected sentence: DNA carries genetic instructions **passed down** through generations, shaping traits in every living organism.

Explanation:

Q. 12

Given below are three statements, some of which may be incorrect. Identify the correct statement(s) and mark it as your answer.

I. Classic literature often reflects the social and political anxieties of the era in which it was written.

II. The Industrial Revolution marked a major turning point in history by changing how goods were produced.

III. A sharp decline in foreign direct investment could potentially hinder the country's overall economic progress.

A) Only I

B) Only II

C) Both I & III

D) Both II & III

E) All I, II & III

Explanation:

Answer: E

Statement I: Correct. It uses a clear subject-verb agreement (literature reflects) and correctly uses the relative clause "in which it was written."

Statement II: Correct. This is a straightforward historical fact stated with proper tense and structure. "Marked" and "changing" are used accurately to show cause and effect.

Statement III: Correct. The modal verb could is paired correctly with the base verb hinder. The phrasing "country's overall economic progress" uses the possessive apostrophe correctly.

Q. 13

Six sentences are given below. Five of those sentences form a meaningful paragraph while one sentence among them doesn't match with the context of the paragraph. Find the odd sentence and arrange the remaining sentences to form a meaningful paragraph.

A) Algorithms now analyze vast amounts of transaction data in real-time to identify suspicious patterns that human monitors might miss.

B) Such a rapid processing speed allows banks to offer a seamless digital experience to their customers.

C) These automated systems reduce the time required for loan approvals from several days to just a few minutes.

D) Beyond fraud detection, machine learning models are also revolutionizing the way creditworthiness is assessed for first-time borrowers.

E) Traditional banking processes still rely heavily on manual record-keeping and paperwork in several small-town branches.

F) Financial institutions are increasingly integrating artificial intelligence to enhance their operational efficiency and security protocols.

Which of the following is the second sentence after rearrangement?

A) F 

B) A 

C) B 

D) C 

E) E 

Explanation:

F → Introduction: AI adoption by financial institutions.

A → Specific application: Fraud detection.

D → Another application: Credit assessment.

C → Benefit: Faster processing.

B → Outcome: Improved customer experience.

Correct Order: F → A → D → C → B

E talks about manual/traditional banking → does not match the context.

Answer: B

The second sentence after rearrangement is Sentence A

Q. 14

Six sentences are given below. Five of those sentences form a meaningful paragraph while one sentence among them doesn't match with the context of the paragraph. Find the odd sentence and arrange the remaining sentences to form a meaningful paragraph.

A) Algorithms now analyze vast amounts of transaction data in real-time to identify suspicious patterns that human monitors might miss.

B) Such a rapid processing speed allows banks to offer a seamless digital experience to their customers.

C) These automated systems reduce the time required for loan approvals from several days to just a few minutes.

D) Beyond fraud detection, machine learning models are also revolutionizing the way creditworthiness is assessed for first-time borrowers.

E) Traditional banking processes still rely heavily on manual record-keeping and paperwork in several small-town branches.

F) Financial institutions are increasingly integrating artificial intelligence to enhance their operational efficiency and security protocols.

Which of the following is the different one according to the context of the paragraph?

A) B 

B) D 

C) C 

D) E 

E) F 

Explanation:

F → Introduction: AI adoption by financial institutions.

A → Specific application: Fraud detection.

D → Another application: Credit assessment.

C → Benefit: Faster processing.

B → Outcome: Improved customer experience.

Correct Order: F → A → D → C → B

E talks about manual/traditional banking → does not match the context.

Answer: D

Sentences A, B, C, D, F are about AI, automation, and digital improvements in banking.

E talks about traditional/manual banking processes, which does not fit with the AI/digitalization context.

Q. 15

Six sentences are given below. Five of those sentences form a meaningful paragraph while one sentence among them doesn't match with the context of the paragraph. Find the odd sentence and arrange the remaining sentences to form a meaningful paragraph.

A) Algorithms now analyze vast amounts of transaction data in real-time to identify suspicious patterns that human monitors might miss.

B) Such a rapid processing speed allows banks to offer a seamless digital experience to their customers.

C) These automated systems reduce the time required for loan approvals from several days to just a few minutes.

D) Beyond fraud detection, machine learning models are also revolutionizing the way creditworthiness is assessed for first-time borrowers.

E) Traditional banking processes still rely heavily on manual record-keeping and paperwork in several small-town branches.

F) Financial institutions are increasingly integrating artificial intelligence to enhance their operational efficiency and security protocols.

Which of the following is the anti-penultimate sentence after rearrangement?

A) A 

B) D 

C) F 

D) C 

E) B 

Explanation:

F → Introduction: AI adoption by financial institutions.

A → Specific application: Fraud detection.

D → Another application: Credit assessment.

C → Benefit: Faster processing.

B → Outcome: Improved customer experience.

Correct Order: F → A → D → C → B

E talks about manual/traditional banking → does not match the context.

Answer: B

Penultimate = second to last → C

Anti-penultimate → the sentence before the penultimate → third from last → D

Q. 16

Six sentences are given below. Five of those sentences form a meaningful paragraph while one sentence among them doesn't match with the context of the paragraph. Find the odd sentence and arrange the remaining sentences to form a meaningful paragraph.

A) Algorithms now analyze vast amounts of transaction data in real-time to identify suspicious patterns that human monitors might miss.

B) Such a rapid processing speed allows banks to offer a seamless digital experience to their customers.

C) These automated systems reduce the time required for loan approvals from several days to just a few minutes.

D) Beyond fraud detection, machine learning models are also revolutionizing the way creditworthiness is assessed for first-time borrowers.

E) Traditional banking processes still rely heavily on manual record-keeping and paperwork in several small-town branches.

F) Financial institutions are increasingly integrating artificial intelligence to enhance their operational efficiency and security protocols.

Which of the following is the first sentence after rearrangement?

A) E 

B) B 

C) A 

D) C 

E) F 

Explanation:

F → Introduction: AI adoption by financial institutions.

A → Specific application: Fraud detection.

D → Another application: Credit assessment.

C → Benefit: Faster processing.

B → Outcome: Improved customer experience.

Correct Order: F → A → D → C → B

E talks about manual/traditional banking → does not match the context.

Answer: E

The first sentence after rearrangement is Sentence F

Q. 17

Six sentences are given below. Five of those sentences form a meaningful paragraph while one sentence among them doesn't match with the context of the paragraph. Find the odd sentence and arrange the remaining sentences to form a meaningful paragraph.

A) Algorithms now analyze vast amounts of transaction data in real-time to identify suspicious patterns that human monitors might miss.

B) Such a rapid processing speed allows banks to offer a seamless digital experience to their customers.

C) These automated systems reduce the time required for loan approvals from several days to just a few minutes.

D) Beyond fraud detection, machine learning models are also revolutionizing the way creditworthiness is assessed for first-time borrowers.

E) Traditional banking processes still rely heavily on manual record-keeping and paperwork in several small-town branches.

F) Financial institutions are increasingly integrating artificial intelligence to enhance their operational efficiency and security protocols.

Which of the following is the fourth sentence after rearrangement?

A) E 

B) F 

C) D 

D) C 

E) B 

Explanation:

F → Introduction: AI adoption by financial institutions.

A → Specific application: Fraud detection.

D → Another application: Credit assessment.

C → Benefit: Faster processing.

B → Outcome: Improved customer experience.

Correct Order: F → A → D → C → B

E talks about manual/traditional banking → does not match the context.

Answer: D

The fourth sentence after rearrangement is Sentence C

Q. 18

In the table given below two columns are given to connect the sentence. The sentence given in column A may or may not be connected with column B contextually and grammatically. You have to identify possible combination to combine the sentence from column A to column B. If any possible connections are not found from the option, choose "None of these."

Column A	Column B
A) The government increased subsidies for farmers,	1) while regulators debating on their long-term impact on financial systems.
B) Digital currencies attract investors worldwide,	2) affecting crop yields and food security in vulnerable regions.
C) Climate change has disrupted rainfall patterns,	3) but many rural households still struggle with rising costs.

A) Only C2

B) Both A3 & C1

C) Both A3 & C2

D) A3, B1 & C2

E) None of these

**Answer: C**

A + 3: "The government increased subsidies for farmers, but many rural households still struggle with rising costs."

This is grammatically perfect. The conjunction "but" correctly connects two independent ideas with a logical contrast.

C + 2: "Climate change has disrupted rainfall patterns, affecting crop yields and food security in vulnerable regions."

Explanation:

This uses a "participle phrase" (affecting) correctly to show the result or consequence of the first clause.

B + 1: "Digital currencies attract investors worldwide, while regulators debating on their long-term impact on financial systems."

"while regulators debating..." - This is grammatically incorrect.

Correct form: "while regulators debate their long-term impact..."

Because of this grammatical error, B1 cannot be a correct choice.

Q. 19

In the table given below two columns are given to connect the sentence. The sentence given in column A may or may not be connected with column B contextually and grammatically. You have to identify possible combination to combine the sentence from column A to column B. If any possible connections are not found from the option, choose "None of these."

Column A	Column B
A) The Reserve Bank raised interest rates,	1) requiring organizations to invest in advanced defensive infrastructure constantly.
B) Cybersecurity threats have become increasingly sophisticated,	2) yet inflationary pressures continue to affect household budgets.
C) Many coastal cities are developing comprehensive strategies	3) to mitigate the impact of rising sea levels and floods.

A) Both B1 & C2 B) Both A1 & C3 C) A1, B3 & C2 D) A2, B1 & C3 E) None of these **Explanation:****Answer: D**

A + 2: "The Reserve Bank raised interest rates, yet inflationary pressures continue to affect household budgets."

The word "yet" creates a logical contrast. Even though the bank took action to stop inflation (raising rates), the problem is still happening.

B + 1: "Cybersecurity threats have become increasingly sophisticated, requiring organizations to invest in advanced defensive infrastructure constantly."

This uses a participle phrase (requiring) to show the direct result of the threats becoming more complex.

C + 3: "Many coastal cities are developing comprehensive strategies to mitigate the impact of rising sea levels and floods."

The infinitive phrase (to mitigate) explains the purpose or goal of the strategies being developed.

Q. 20

In the table given below two columns are given to connect the sentence. The sentence given in column A may or may not be connected with column B contextually and grammatically. You have to identify possible combination to combine the sentence from column A to column B. If any possible connections are not found from the option, choose "None of these."

Column A	Column B
A) Because the economy is recovering slowly,	1) while misinformation campaigns often discourage public participation.
B) Although the battery is small,	2) analysts suggest that the recovery phase will take another two years.
C) Vaccination programs reduce disease outbreaks,	3) but it provides enough power to run the device for days.

A) Only B3 B) Both A2 & C1 C) Both A3 & B2 D) A1, B3 & C2 E) None of these **Answer: B**

A + 2: "Because the economy is recovering slowly, analysts suggest that the recovery phase will take another two years."

This is a perfect "cause and effect" sentence. The slow recovery (cause) leads to the analysts' prediction (effect).

C + 1: "Vaccination programs reduce disease outbreaks, while misinformation campaigns often discourage public participation."

This uses "while" to show a clear contrast between a positive action (vaccination programs) and a negative obstacle (misinformation).

B + 3: "Although the battery is small, but it provides enough power to run the device for days."

We cannot use "Although" and "but" in the same sentence. They both do the same job (showing contrast). We should say either:

"Although the battery is small, it provides..."

"The battery is small, but it provides..."

Explanation:

Q. 21

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

How do migrants primarily contribute to the local economy according to the text?

- A) By filling labor shortages, which eliminates wage fluctuations 
- B) Through increased consumption and tax contributions 
- C) By boosting economies first, which then fills labor shortages 
- D) By contributing taxes, which ends job insecurity for all groups 
- E) By filling labor shortages in construction only, not technology 

Answer: B

The passage states: "Their presence boosts local economies by increasing consumption and contributing taxes." This clearly shows that migrants primarily contribute to the local economy through higher consumption and tax contributions. The passage also mentions that migrants fill labor shortages, but the direct economic benefits highlighted are increased consumption and taxes.

Why the other options are wrong:

Explanation:

a) Filling labor shortages does not eliminate wage fluctuations. The passage states that labor markets may experience competition, leading to wage fluctuations and job insecurity for certain groups.

c) The passage does not suggest that migrants boost economies first and then fill labor shortages. It states that both labor contribution and economic benefits occur as part of migration.

d) Although migrants contribute taxes, this does not end job insecurity for all groups. The passage mentions that some groups may still face employment challenges.

e) Migrants fill labor shortages in various industries, "ranging from construction to technology," not only in construction.

Correct answer: b) Through increased consumption and tax contributions

Q. 22

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

Which of the following is suggested as a method to foster social cohesion?**A) Community initiatives, effective only after barriers are fully removed****B) Social services, ranked above educational programs by the text****C) Inclusive urban policies and educational programs****D) Educational programs, but only for local communities, not migrants****E) Reducing language difficulties first, which alone guarantees integration**

Answer: C

The passage states: "Educational programs, community initiatives, and inclusive urban policies can foster cohesion and reduce social tension." This clearly suggests that inclusive urban policies and educational programs are effective methods to promote social cohesion among migrant populations and local communities.

Why the other options are wrong:

Explanation:

a) The passage does not state that community initiatives are effective only after barriers are fully removed. Instead, it presents them as a way to reduce social tension and improve integration.

b) The text mentions social services as an area where migrants may have limited access, but it does not rank social services above educational programs.

d) Educational programs are suggested as a way to support cohesion among communities, not only for local communities and not excluding migrants.

e) The passage states that language difficulties are one of several barriers. Reducing them alone does not guarantee integration.

Correct answer: c) Inclusive urban policies and educational programs

Q. 23

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

What is the role of "Effective Governance" according to the passage?

- A) Restricting migration, which prevents infrastructure strain 
- B) Prioritizing economic growth, since harmony follows automatically 
- C) Focusing on technology, as other industries adapt on their own 
- D) Eliminating diversity first, to achieve stability before renewal 
- E) To convert migration challenges into opportunities for renewal 

Answer: E

The passage states: "Effective governance can turn migration-related challenges into opportunities for urban renewal." This clearly shows that effective governance plays a role in addressing the problems caused by migration and transforming them into opportunities for improving cities through renewal and sustainable development.

Why the other options are wrong:

- a) The passage does not suggest restricting migration as a solution. It focuses on managing migration-related challenges through effective planning and governance.
- b) The passage does not say that prioritizing economic growth alone will automatically create social harmony. It highlights the importance of inclusive policies and proper management.
- c) The passage does not mention focusing only on technology. It discusses broader solutions involving infrastructure, public transport, and sustainable urban planning.
- d) The passage presents cultural diversity as a benefit of migration and does not suggest eliminating diversity to achieve stability.

Correct answer: e) To convert migration challenges into opportunities for renewal

Explanation:

Q. 24

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

The word “cohesion” in the passage is closest in meaning to:

A) Division

B) Unity

C) Conflict

D) Fragmentation

E) Exclusion

Answer: B

The passage states: "Educational programs, community initiatives, and inclusive urban policies can foster cohesion and reduce social tension." Here, cohesion refers to bringing people together and promoting harmony, which is closest in meaning to unity.

Why the other options are wrong:**Explanation:**

- a) Division – Opposite of cohesion; cohesion reduces division.
- c) Conflict – Cohesion works to reduce conflict, not increase it.
- d) Fragmentation – Cohesion prevents fragmentation, so this is incorrect.
- e) Exclusion – Cohesion encourages inclusion, not exclusion.

Correct answer: b) Unity

Q. 25

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

According to the passage, the long-term benefit of inclusivity in diverse cities is:**A) Economic growth and community well-being over time****B) Initial tension that later becomes the long-term benefit****C) Culinary uniformity that follows once diversity fades****D) Fewer creative industries as inclusivity replaces innovation****E) Simpler urban planning once diversity issues are resolved**

Answer: A

The passage states: "Cities that promote inclusivity often see long-term benefits in economic growth and community well-being." This clearly shows that inclusivity in diverse cities leads to sustained economic development and improved social conditions over time.

Why the other options are wrong:

Explanation:

a) This is correct because the passage directly mentions economic growth and community well-being as the long-term benefits of inclusivity.

b) The passage states that initial social tension may occur, but it is not the long-term benefit. The benefit comes from promoting inclusivity.

c) The passage highlights that diversity enriches cities with different cuisines and traditions. It does not suggest culinary uniformity or the fading of diversity.

d) The passage states that migrants contribute to creative industries, entrepreneurship, and social innovation. Inclusivity supports innovation rather than reducing it.

e) The passage does not mention that inclusivity simplifies urban planning. Urban planning challenges continue to require sustainable solutions.

Correct answer: a) Economic growth and community well-being over time

Q. 26

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

What environmental/physical impact is associated with rapid urbanization in the passage?

- A) Decrease in waste management issues 
- B) Reduction in the number of informal settlements 
- C) Strain on public utilities and increased pollution 
- D) Expansion of green spaces automatically 
- E) Lower demand for public transport systems 

Answer: C

The passage states: "Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often intensify with rapid urbanization." This clearly shows that rapid urbanization affects cities physically and environmentally by putting pressure on infrastructure and increasing pollution.

Why the other options are wrong:**Explanation:**

- a) Decrease in waste management issues – The passage says waste management issues intensify, not decrease.
- b) Reduction in the number of informal settlements – The passage indicates an increase in informal settlements, not a reduction.
- d) Expansion of green spaces automatically – Green spaces are suggested as a solution, but expansion is not automatic.
- e) Lower demand for public transport systems – Rapid urbanization usually increases demand, not lowers it.

Correct answer: c) Strain on public utilities and increased pollution

Q. 27

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

What can be an adverse effect of migration on the urban labor market?

- A) Total elimination of job insecurity 
- B) Stable wage growth across all sectors 
- C) Decrease in technological innovation 
- D) Competition leading to wage fluctuations 
- E) Rapid decline in the construction industry 

Answer: D

The passage states: "However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups." This clearly shows that one adverse effect of migration is increased competition that affects wages and job security.

Why the other options are wrong:**Explanation:**

- a) Total elimination of job insecurity – The passage actually mentions job insecurity as a possible effect, so elimination is incorrect.
- b) Stable wage growth across all sectors – Wages may fluctuate, not remain stable.
- c) Decrease in technological innovation – The passage does not suggest migration reduces innovation; in fact, diversity can enhance creativity.
- e) Rapid decline in the construction industry – The passage mentions migrants fill labor shortages, not cause decline in industries.

Correct answer: d) Competition leading to wage fluctuations

Q. 28

Read the passage given below carefully and answer the following questions.

Migration has long shaped urban landscapes, influencing the social, economic, and cultural dimensions of cities. People move to urban centers seeking improved job prospects, education, and better living conditions. This movement often results in rapid population growth, which challenges urban planning and infrastructure. Cities must adapt to these changes to maintain functional housing, transportation, and public services. Moreover, migration enriches cities with diverse ideas, cuisines, and traditions, creating vibrant urban cultures.

Economic opportunities are a primary factor driving migration. Migrants often fill labor shortages in industries ranging from construction to technology. Their presence boosts local economies by increasing consumption and contributing taxes. However, urban labor markets can also experience competition, leading to wage fluctuations and job insecurity for certain groups. Understanding these dynamics is crucial for policymakers seeking equitable growth.

Social integration remains a central challenge for migrant populations. New arrivals may face cultural barriers, language difficulties, and limited access to social services. Local communities, in turn, may struggle to accommodate different cultural practices and norms. Educational programs, community initiatives, and inclusive urban policies can foster **cohesion** and reduce social tension. Over time, successful integration can transform cities into hubs of innovation and social harmony.

Urban migration also impacts the physical and environmental structure of cities. Increased demand for housing can lead to informal settlements and strain on public utilities. Traffic congestion, pollution, and waste management issues often **intensify** with rapid urbanization. Urban planners must address these problems through sustainable designs, public transport systems, and green spaces. Effective governance can turn migration-related challenges into opportunities for urban renewal.

Cultural diversity is one of the most visible effects of migration. Festivals, languages, and culinary traditions from different regions enrich city life. Migrants contribute to creative industries, entrepreneurship, and social innovation. While diversity can generate social tension initially, cities that promote inclusivity often see long-term benefits in economic growth and community well-being. Ultimately, migration shapes cities not just demographically but as centers of creativity and human connection.

Choose the word which is most nearly **OPPOSITE** in meaning to "intensify" as used in the passage.

- A) Escalate 
- B) Elaborate 
- C) Abate 
- D) Heighten 
- E) Magnify 

Answer: C

The passage states: "Traffic congestion, pollution, and waste management issues often intensify with rapid urbanization." Here, intensify means to increase or become stronger. The word abate means to lessen or reduce, making it the correct antonym.

Why the other options are wrong:**Explanation:**

- a) Escalate – Means to increase, same as intensify, not opposite.
- b) Elaborate – Means to explain or expand, unrelated in meaning.
- d) Heighten – Means to increase, not opposite.
- e) Magnify – Means to make larger or more intense, not opposite.

Correct answer: c) Abate

Q. 29

Given below are three statements, some of which may be incorrect. Identify the incorrect statement(s) and mark it as your answer.

I. Educational institutions must adapt their curricula to meet the evolving demands of the modern workforce.

II. Many software companies are now adopting remote work policies to attract top talent from around the world.

III. Mergers and acquisitions in the banking industry often lead to improve operational efficiency and reach.

- A) Only I 
- B) Only II 
- C) Only III 
- D) Both I & III 
- E) Both I & II 

Answer: C

Statement I is correct: It is a grammatically sound sentence that correctly uses the plural "institutions" with the plural verb "must adapt."

Statement II is correct: It is a standard, error-free sentence that accurately uses the present continuous tense ("are now adopting") to describe a current trend.

Explanation:

Statement III is incorrect: The expression lead to must be followed by a noun phrase or a gerund (-ing form), not the base form of the verb. Therefore, lead to improve is incorrect. It should be lead to improved operational efficiency and reach (noun phrase) or lead to improving operational efficiency and reach (gerund phrase).

Corrected sentence: Mergers and acquisitions in the banking industry often lead to improved operational efficiency and reach.

Q. 30

Given below are three statements, some of which may be incorrect. Identify the incorrect statement(s) and mark it as your answer.

I. Marathon runners pace themselves carefully, conserving energy for the demanding a final few miles.

II. Confirmation bias leads people to favor information that supports beliefs they already hold.

III. Sculptors chip away excess stone carefully, revealing the form they envisioned from the start.

A) Both I & III

B) Both II & III

C) Only II

D) Only I

E) Only III

Answer: D

Only I

Statement I is incorrect: The phrase “the demanding a final few miles” is grammatically incorrect because the article “a” is unnecessary before “final few miles.”

Corrected sentence: Marathon runners pace themselves carefully, conserving energy for the **demanding final few miles**.

Statement II is correct: Confirmation bias refers to the tendency of people to favor information that supports their existing beliefs.

Statement III is correct: The sentence is grammatically and conceptually correct. Sculptors often remove excess stone to reveal the intended form of a sculpture.

Quantitative Aptitude

Q. 31

Study the following information carefully and answer the questions.

The given table shows the number of four different home décor items i.e. wall hangings, dream catchers, clay pots and handmade candles in two shops A and B.

Home decor items	Shop A	Shop B
Wall hangings	126	$11/9^{\text{th}}$ of number of wall hangings in shop A
Dream catcher	$7(9/13)$ % less than that in shop B	143
Clay pot	120	4 less than number of wall hangings in shop B
Handmade candles	84% of number of clay pots in shop B	189

The average of total number of home decor items in shop A is how much more or less than that in shop B?

- A) 40 more 
- B) 33 less 
- C) 36 more 
- D) 43 less 
- E) 34 less 

Explanation:**Wall hangings:**

The number of wall hangings in shop A = 126

The number of wall hangings in shop B = $11/9 \times 126 = 154$

Dream catchers:

The number of dream catchers in shop B = 143

The number of dream catchers in shop A = $143 - [7(9/13) \% \times 143]$

$= 143 - (100/(13/100) \times 143) = 132$

Clay pots:

The number of clay pots in shop A = 120

The number of clay pots in shop B = $154 - 4 = 150$

Handmade candles:

The number of handmade candles in shop A = $84\% \text{ of } 150 = 126$

The number of handmade candles in shop B = 189

Answer: B

Average of total number of home decor items in shop A

$= (126 + 132 + 120 + 126)/4 = 504/4 = 126$

Average of total number of home decor items in shop B

$= (154 + 143 + 150 + 189)/4 = 636/4 = 159$

Required difference = $159 - 126 = 33$ less

Q. 32

Study the following information carefully and answer the questions.

The given table shows the number of four different home décor items i.e. wall hangings, dream catchers, clay pots and handmade candles in two shops A and B.

Home decor items	Shop A	Shop B
Wall hangings	126	$11/9^{\text{th}}$ of number of wall hangings in shop A
Dream catcher	7(9/13) % less than that in shop B	143
Clay pot	120	4 less than number of wall hangings in shop B
Handmade candles	84% of number of clay pots in shop B	189

A customer buys 60 clay pots from Shop A at Rs. 65 each. On finding that 20% of them were damaged, he asked for 10 dream catchers priced at Rs. 120 each in exchange and paid only Rs. 300 extra. What percentage discount was given on the price of each dream catcher as compensation?

- A) 20% 
- B) 15% 
- C) 16% 
- D) 12% 
- E) 10% 

Wall hangings:

The number of wall hangings in shop A = 126

The number of wall hangings in shop B = $11/9 * 126 = 154$

Dream catchers:

The number of dream catchers in shop B = 143

The number of dream catchers in shop A = $143 - [7(9/13) \% * 143]$

$= 143 - (100/(13/100) * 143) = 132$

Clay pots:

The number of clay pots in shop A = 120

The number of clay pots in shop B = $154 - 4 = 150$

Handmade candles:

The number of handmade candles in shop A = $84\% \text{ of } 150 = 126$

The number of handmade candles in shop B = 189

Answer: E

Total cost of 60 clay pots = $60 * 65 = \text{Rs. } 3900$

The number of damaged clay pots = $20\% \text{ of } 60 = 12$

Cost of damaged clay pots = $12 * 65 = \text{Rs. } 780$

Cost of 10 dream catchers = $10 * 120 = \text{Rs. } 1200$

Total payment for dream catcher = cost of damaged clay pots + Rs. 300

$= \text{Rs. } 780 + \text{Rs. } 300 = \text{Rs. } 1080$

The discount price per dream catcher = $\text{Rs. } 1080/10 = \text{Rs. } 108$

Discount percentage = $(\text{original price} - \text{discounted price})/\text{original price} * 100$

$= (120 - 108)/120 * 100 = 10\%$

Explanation:

Q. 33

Study the following information carefully and answer the questions.

The given table shows the number of four different home décor items i.e. wall hangings, dream catchers, clay pots and handmade candles in two shops A and B.

Home decor items	Shop A	Shop B
Wall hangings	126	$11/9^{\text{th}}$ of number of wall hangings in shop A
Dream catcher	7(9/13) % less than that in shop B	143
Clay pot	120	4 less than number of wall hangings in shop B
Handmade candles	84% of number of clay pots in shop B	189

In shop C, the ratio of wall hangings to handmade candles is 7:8. The number of wall hangings in shop C is $33(1/3)$ % more than the number of handmade candles in shop B. Find the ratio of handmade candles in shop A to shop C.

- A) 5:14 
- B) 14:9 
- C) 8:9 
- D) 7:16 
- E) 9:8 

Explanation:**Wall hangings:**

The number of wall hangings in shop A = 126

The number of wall hangings in shop B = $11/9 \times 126 = 154$

Dream catchers:

The number of dream catchers in shop B = 143

The number of dream catchers in shop A = $143 - [7(9/13) \% \times 143]$

$= 143 - (100/(13/100) \times 143) = 132$

Clay pots:

The number of clay pots in shop A = 120

The number of clay pots in shop B = $154 - 4 = 150$

Handmade candles:

The number of handmade candles in shop A = $84\% \text{ of } 150 = 126$

The number of handmade candles in shop B = 189

Answer: D

The number of wall hangings in the shop C = $189 + 33(1/3) \% \text{ of } 189 = 252$

Let the number of wall hangings and handmade candles be $7x$ and $8x$

$7x = 252$

$x = 36$

The number of handmade candles in shop C = $8x = 8 \times 36 = 288$

The number of handmade candles in shop A = 126

Required ratio = $126:288 = 7:16$

Q. 34

Study the following information carefully and answer the questions.

The given table shows the number of four different home décor items i.e. wall hangings, dream catchers, clay pots and handmade candles in two shops A and B.

Home decor items	Shop A	Shop B
Wall hangings	126	$11/9^{\text{th}}$ of number of wall hangings in shop A
Dream catcher	$7(9/13)$ % less than that in shop B	143
Clay pot	120	4 less than number of wall hangings in shop B
Handmade candles	84% of number of clay pots in shop B	189

A man buys x dream catchers and y clay pots from Shop B, priced at Rs. 90 and Rs. 70 each, respectively. By mistake, he interchanged the prices and paid Rs. 8,900 instead of the original total of Rs. 8,700. Find the total number of dream catchers and clay pots left in Shop B.

- A) 183 
- B) 191 
- C) 182 
- D) 189 
- E) 180 

Wall hangings:

The number of wall hangings in shop A = 126

The number of wall hangings in shop B = $11/9 * 126 = 154$

Dream catchers:

The number of dream catchers in shop B = 143

The number of dream catchers in shop A = $143 - [7(9/13) \% * 143]$

$= 143 - (100/(13/100) * 143) = 132$

Clay pots:

The number of clay pots in shop A = 120

The number of clay pots in shop B = $154 - 4 = 150$

Handmade candles:

The number of handmade candles in shop A = $84\% \text{ of } 150 = 126$

The number of handmade candles in shop B = 189

Answer: A

From the given,

$$90 * x + 70 * y = 8700$$

$$9x + 7y = 870 \text{ -----(1)}$$

$$70 * x + 90 * y = 8900$$

$$7x + 9y = 890 \text{ -----(2)}$$

From (1) and (2),

$$x = 50, y = 60$$

The number of dream catchers left in shop B = $143 - 50 = 93$

The number of clay pots left in shop B = $150 - 60 = 90$

Required total = $93 + 90 = 183$

Explanation:

Q. 35

Study the following information carefully and answer the questions.

The given table shows the number of four different home décor items i.e. wall hangings, dream catchers, clay pots and handmade candles in two shops A and B.

Home decor items	Shop A	Shop B
Wall hangings	126	$11/9^{\text{th}}$ of number of wall hangings in shop A
Dream catcher	$7(9/13)$ % less than that in shop B	143
Clay pot	120	4 less than number of wall hangings in shop B
Handmade candles	84% of number of clay pots in shop B	189

In Shop C, the number of each type of home decor item is $x\%$ less than the total number of home decor items in Shops A and B combined. Find $x\%$, if the average number of home decor items in Shop C is 4 more than the number of wall hangings in the same shop.

- A) 19% 
- B) 24% 
- C) 25% 
- D) 20% 
- E) 21% 

Wall hangings:

The number of wall hangings in shop A = 126

The number of wall hangings in shop B = $11/9 * 126 = 154$

Dream catchers:

The number of dream catchers in shop B = 143

The number of dream catchers in shop A = $143 - [7(9/13) \% * 143]$

$= 143 - (100/(13/100) * 143) = 132$

Clay pots:

The number of clay pots in shop A = 120

The number of clay pots in shop B = $154 - 4 = 150$

Handmade candles:

The number of handmade candles in shop A = $84\% \text{ of } 150 = 126$

The number of handmade candles in shop B = 189

Answer: D**Explanation:**

The number of home decor item in shop C = $(100 - x)\% * \text{total number of decor item in shop A and B together}$

The number of wall hangings in shop C = $(100 - x)/100 * 280$

The number of dream catchers in shop C = $(100 - x)/100 * 275$

The number of clay pots in shop C = $(100 - x)/100 * 270$

The number of handmade candles in shop C = $(100 - x)/100 * 315$

From given,

Average of number of home decor items in shop C = $[(100 - x)/100 * 280] + 4$

$[(100 - x)/100 * 280 + (100 - x)/100 * 275 + (100 - x)/100 * 270 + (100 - x)/100 * 315] * 1/4 = [(100 - x)/100 * 280] + 4$

$((100 - x)/100) * [(280 + 275 + 270 + 315)/4] = [(100 - x) * 280 + 400]/100$

$(100 - x) * (1140/4) = 28000 - 280x + 400$

$114000 - 1140x = 112000 - 1120x + 1600$

$114000 - 112000 - 1600 = 1140x - 1120x$

$20x = 400$

Required value $x\% = 20\%$

Q. 36

A 60-liter vessel containing acid is partially replaced with water, resulting in an acid-to-water ratio of 3:1. Then, after 'y' liters of the mixture are replaced with 6 liters of water, the ratio becomes 2:1. Then, find the final ratio of water to acid if the quantity of acid initially removed and 9 liters of water are added to the mixture.

A) 9:16 B) 9:17 C) 11:13 D) 17:11 E) 13:17 **Answer: B**

Quantity of concentrated acid in the vessel = 60 liters

Let the quantity of acid removed and water added be x

After 1st replacement, the ratio of acid to water is 3:1

$$(60 - x)/x = 3/1$$

$$x = 15$$

Now, quantity of acid in the mixture = $3 * 15 = 45$ liters

Quantity of water in the mixture = 15 liters

After y liters of mixture is replaced, the ratio becomes 2:1

Explanation:

Given that, after removing y liters of mixture and added 6 liters of water, ratio becomes 2 : 1,

$$(45 - (3y/4)) / (15 - (y/4) + 6) = 2/1$$

$$(180 - 3y) * 1 = (84 - y) * 2$$

$$y = 12$$

Now, quantity of acid in the mixture = $45 - (3*12)/4 = 36$ litersQuantity of water in the mixture = $15 - 12/4 + 6 = 18$ litersFinal quantity of acid in the mixture = $36 + 15 = 51$ Final quantity of water in the mixture = $18 + 9 = 27$ Required ratio = $27 : 51 = 9:17$

Q. 37

A and B alone can complete a work in 15 days and 9 days respectively and C destroys the work. If A, B and C started working together, after 5 days A and C left the work and the remaining work was completed by B alone in 2 days. Find the time taken by C to destroy the work.

A) 30 days B) 28 days C) 35 days D) 45 days E) 40 days **Answer: D**

Let, the time taken by C to destroy the work = x days

$$(1/15 + 1/9 - 1/x) * 5 + 2/9 = 1$$

$$40/45 - 5/x + 10/45 = 1$$

$$50/45 - 5/x = 1$$

$$50/45 - 1 = 5/x$$

$$5/45 = 5/x$$

$$x = 5 * 45/5$$

$$x = 45$$

Hence, the correct answer is option D.

Explanation:

Q. 38

Kavin bought a chair and sofa together for Rs. 5000. If he sells the chair at the profit of 40% and sofa at the profit of 25%, then he earns a profit of Rs. 1550. Find the cost price of the chair.

- A) Rs. 2800 
- B) Rs. 3000 
- C) Rs. 1800 
- D) Rs. 2000 
- E) Rs. 3200 

Answer: D

Let, the cost price of chair = Rs. x

The cost price of sofa = Rs. (5000 - x)

$$x * 140/100 + (5000 - x) * 125/100 - 5000 = 1550$$

$$1.4x + 6250 - 1.25x = 6550$$

$$0.15x = 300$$

$$x = 2000$$

The cost price of the chair = Rs. 2000

Hence, the correct answer is option D.

Q. 39

In a class, the weight of four boys is 32 kg, 40kg, 28kg and 50 kg and the weight of three girls is 34 kg 52 kg and 30 kg. Find the mean weight of the class.

- A) 38 kg 
- B) 28 kg 
- C) 25 kg 
- D) 22 kg 
- E) 42 kg 

Answer: A

Explanation:

$$\text{Required mean} = (32 + 40 + 28 + 50 + 34 + 52 + 30)/(4 + 3) = 266/7 = 38 \text{ kg}$$

Hence, the correct answer is option A.

Q. 40

A milkman has a 60 litres mixture of milk and water in the ratio 7:5. 36 litres of mixture is replaced by the same quantity of water and repeated one more time. Find the quantity of milk in the resultant solution.

A) 5.6 litres B) 7.2 litres C) 12 litres D) 8.8 litres E) 9.6 litres **Answer: A**The quantity of milk in the mixture = $60 \times \frac{7}{12} = 35$ litresThe quantity of water in the mixture = $60 \times \frac{5}{12} = 25$ litresMilk in final solution = $35 \times (1 - \frac{36}{60})^2$ = $35 \times \frac{2}{5} \times \frac{2}{5}$ = $\frac{28}{5}$

= 5.6 litres

Hence, the correct answer is option A.

Explanation:

Q. 41

The ratio of the present age of A to B is 7:8 and the ratio of A's age before 9 years to present age of B is 5:7. If the present age of C is 11 years older than A, then find the present age of C.

- A) 72 years 
- B) 56 years 
- C) 49 years 
- D) 66 years 
- E) 60 years 

Answer: E

Let, the present age of A and B be $7x$ years and $8x$ years respectively.

$$7x - 9/8x = 5/7$$

$$49x - 63 = 40x$$

$$9x = 63$$

$$x = 7$$

The present age of A = $7 * 7 = 49$ years

The present age of C = $(49 + 11) = 60$ years

Hence, the correct answer is option E.

Explanation:

Q. 42

A boat covers 216 km upstream in 6 hours and the ratio of the downstream speed to the speed of stream is 5:1. Find the time taken by boat to cover 120 km downstream.

- A) 3 hours 
- B) 5 hours 
- C) 2 hours 
- D) 8 hours 
- E) 10 hours 

Answer: C

The upstream speed of the boat = $216/6 = 36$ km/hr

Let, the speed of the boat in still water = x km/hr

The speed of the stream = y km/hr

The downstream speed of the boat = $5y$ km/hr

The upstream speed of the boat = $(x - y)$ km/hr

Explanation:

$$x + y = 5y$$

$$x = 4y$$

$$4y - y = 36$$

$$y = 36/3 = 12$$

The downstream speed of the boat = $5 * 12 = 60$ km/hr

Time taken by boat to cover 120 km in downstream = $120/60 = 2$ hours

Hence, the correct answer is option C.

Q. 43

Study the following information carefully and answer the following questions.

The given bar graph below shows the total number of cookies (sugar + macaroon) baked in 10's in five different bakeries namely A, B, C, D and E respectively and also the difference between the number of sugar and macaroon cookies baked in these five bakeries.

Note: The number of sugar cookies baked in all bakeries is more than that of macaroon cookies baked.

In Bakery B, if the number of sugar cookies and macaroon cookies sold is 280 and 220, then find the difference between the number of sugar and macaroon cookies unsold.

- A) 90 ☒
- B) 70 ☒
- C) 60 ☒
- D) 50 ☒
- E) 20 ☒

Explanation:**In Bakery A:**

The total number of cookies baked = 600

The number of sugar cookies baked = $(600 + 30)/2 = 315$

The number of macaroon cookies baked = $(600 - 315) = 285$

In Bakery B:

The total number of cookies baked = 700

The number of sugar cookies baked = $(700 + 80)/2 = 390$

The number of macaroon cookies baked = $(700 - 390) = 310$

In Bakery C:

The total number of cookies baked = 540

The number of sugar cookies baked = $(540 + 50)/2 = 295$

The number of macaroon cookies baked = $(540 - 295) = 245$

In Bakery D:

The total number of cookies baked = 800

The number of sugar cookies baked = $(800 + 40)/2 = 420$

The number of macaroon cookies baked = $(800 - 420) = 380$

In Bakery E:

The total number of cookies baked = 640

The number of sugar cookies baked = $(640 + 20)/2 = 330$

The number of macaroon cookies baked = $(640 - 330) = 310$

Bakery	The total number of cookies baked	The number of sugar cookies baked	The number of macaroon cookies baked
A	600	315	285
B	700	390	310
C	540	295	245
D	800	420	380
E	640	330	310

Answer: E

The number of sugar cookies unsold in Bakery B = $(390 - 280) = 110$

The number of macaroon cookies unsold in Bakery B = $(310 - 220) = 90$

Required difference = $(110 - 90) = 20$

Hence, the correct answer is option E.

Q. 44

Study the following information carefully and answer the following questions.

The given bar graph below shows the total number of cookies (sugar + macaroon) baked in 10's in five different bakeries namely A, B, C, D and E respectively and also the difference between the number of sugar and macaroon cookies baked in these five bakeries.

Note: The number of sugar cookies baked in all bakeries is more than that of macaroon cookies baked.

■ The total number of cookies baked in 10's

■ Difference between the number of sugar and macaroon cookies baked

The number of sugar cookies baked in bakery F is 25% more than that in bakery D and the number of macaroon cookies baked in bakery F is 25 more than that of sugar cookies. Find the total number of macaroon cookies baked in bakery F.

- A) 525 ☒
- B) 550 ☒
- C) 600 ☒
- D) 625 ☒
- E) 545 ☒

In Bakery A:

The total number of cookies baked = 600

The number of sugar cookies baked = $(600 + 30)/2 = 315$

The number of macaroon cookies baked = $(600 - 315) = 285$

In Bakery B:

The total number of cookies baked = 700

The number of sugar cookies baked = $(700 + 80)/2 = 390$

The number of macaroon cookies baked = $(700 - 390) = 310$

In Bakery C:

The total number of cookies baked = 540

The number of sugar cookies baked = $(540 + 50)/2 = 295$

The number of macaroon cookies baked = $(540 - 295) = 245$

In Bakery D:

The total number of cookies baked = 800

The number of sugar cookies baked = $(800 + 40)/2 = 420$

The number of macaroon cookies baked = $(800 - 420) = 380$

In Bakery E:

The total number of cookies baked = 640

The number of sugar cookies baked = $(640 + 20)/2 = 330$

The number of macaroon cookies baked = $(640 - 330) = 310$

Explanation:

Bakery	The total number of cookies baked	The number of sugar cookies baked	The number of macaroon cookies baked
A	600	315	285
B	700	390	310
C	540	295	245
D	800	420	380
E	640	330	310

Answer: B

The number of sugar cookies baked in bakery F = $420 * 125/100 = 525$

The number of macaroon cookies baked in bakery F = $(525 + 25) = 550$

Hence, the correct answer is option B.

Q. 45

Study the following information carefully and answer the following questions.

The given bar graph below shows the total number of cookies (sugar + macaroon) baked in 10's in five different bakeries namely A, B, C, D and E respectively and also the difference between the number of sugar and macaroon cookies baked in these five bakeries.

Note: The number of sugar cookies baked in all bakeries is more than that of macaroon cookies baked.

The total number of cookies baked in bakery A is what percentage of the total number of cookies baked in bakery D.

- A) 25% ☒
- B) 80% ☒
- C) 20% ☒
- D) 75% ☒
- E) 35% ☒

In Bakery A:

The total number of cookies baked = 600

The number of sugar cookies baked = $(600 + 30)/2 = 315$

The number of macaroon cookies baked = $(600 - 315) = 285$

In Bakery B:

The total number of cookies baked = 700

The number of sugar cookies baked = $(700 + 80)/2 = 390$

The number of macaroon cookies baked = $(700 - 390) = 310$

In Bakery C:

The total number of cookies baked = 540

The number of sugar cookies baked = $(540 + 50)/2 = 295$

The number of macaroon cookies baked = $(540 - 295) = 245$

In Bakery D:

The total number of cookies baked = 800

The number of sugar cookies baked = $(800 + 40)/2 = 420$

The number of macaroon cookies baked = $(800 - 420) = 380$

Explanation:**In Bakery E:**

The total number of cookies baked = 640

The number of sugar cookies baked = $(640 + 20)/2 = 330$

The number of macaroon cookies baked = $(640 - 330) = 310$

Bakery	The total number of cookies baked	The number of sugar cookies baked	The number of macaroon cookies baked
A	600	315	285
B	700	390	310
C	540	295	245
D	800	420	380
E	640	330	310

Answer: D

Required percentage = $(600/800) * 100 = 75\%$.

Hence, the correct answer is option D.

Q. 46

Study the following information carefully and answer the following questions.

The given bar graph below shows the total number of cookies (sugar + macaroon) baked in 10's in five different bakeries namely A, B, C, D and E respectively and also the difference between the number of sugar and macaroon cookies baked in these five bakeries.

Note: The number of sugar cookies baked in all bakeries is more than that of macaroon cookies baked.

■ The total number of cookies bakes in 10's

■ Difference between the number of sugar and macaroon cookies baked

In bakery C, if the number of macaroon cookies baked is $\frac{1}{5}$ less, then find the number of macaroon cookies baked after decreasing.

- A) 185 ✗
- B) 196 ✓
- C) 206 ✗
- D) 96 ✗
- E) 116 ✗

In Bakery A:

The total number of cookies baked = 600

The number of sugar cookies baked = $(600 + 30)/2 = 315$

The number of macaroon cookies baked = $(600 - 315) = 285$

In Bakery B:

The total number of cookies baked = 700

The number of sugar cookies baked = $(700 + 80)/2 = 390$

The number of macaroon cookies baked = $(700 - 390) = 310$

In Bakery C:

The total number of cookies baked = 540

The number of sugar cookies baked = $(540 + 50)/2 = 295$

The number of macaroon cookies baked = $(540 - 295) = 245$

In Bakery D:

The total number of cookies baked = 800

The number of sugar cookies baked = $(800 + 40)/2 = 420$

The number of macaroon cookies baked = $(800 - 420) = 380$

In Bakery E:

The total number of cookies baked = 640

The number of sugar cookies baked = $(640 + 20)/2 = 330$

The number of macaroon cookies baked = $(640 - 330) = 310$

Explanation:

Bakery	The total number of cookies baked	The number of sugar cookies baked	The number of macaroon cookies baked
A	600	315	285
B	700	390	310
C	540	295	245
D	800	420	380
E	640	330	310

Answer: B

The number of macaroon cookies baked in bakery C after decreasing = $(245 - 245/5) = 196$

Hence, the correct answer is option B.

Q. 47

Study the following information carefully and answer the following questions.

The given bar graph below shows the total number of cookies (sugar + macaroon) baked in 10's in five different bakeries namely A, B, C, D and E respectively and also the difference between the number of sugar and macaroon cookies baked in these five bakeries.

Note: The number of sugar cookies baked in all bakeries is more than that of macaroon cookies baked.

■ The total number of cookies bakes in 10's

■ Difference between the number of sugar and macaroon cookies baked

Find the ratio of the number of sugar cookies baked in bakeries A and B together with the number of macaroon cookies baked in bakery D.

A) 141:76 ✓

B) 128:89 ✗

C) 131:121 ✗

D) 81:89 ✗

E) 31:39 ✗

Explanation:**In Bakery A:**

The total number of cookies baked = 600

The number of sugar cookies baked = $(600 + 30)/2 = 315$

The number of macaroon cookies baked = $(600 - 315) = 285$

In Bakery B:

The total number of cookies baked = 700

The number of sugar cookies baked = $(700 + 80)/2 = 390$

The number of macaroon cookies baked = $(700 - 390) = 310$

In Bakery C:

The total number of cookies baked = 540

The number of sugar cookies baked = $(540 + 50)/2 = 295$

The number of macaroon cookies baked = $(540 - 295) = 245$

In Bakery D:

The total number of cookies baked = 800

The number of sugar cookies baked = $(800 + 40)/2 = 420$

The number of macaroon cookies baked = $(800 - 420) = 380$

In Bakery E:

The total number of cookies baked = 640

The number of sugar cookies baked = $(640 + 20)/2 = 330$

The number of macaroon cookies baked = $(640 - 330) = 310$

Bakery	The total number of cookies baked	The number of sugar cookies baked	The number of macaroon cookies baked
A	600	315	285
B	700	390	310
C	540	295	245
D	800	420	380
E	640	330	310

Answer: A

The number of sugar cookies baked in bakeries A and B together = $(315 + 390) = 705$

The number of macaroon cookies baked in bakery D = 380

Required ratio = $705: 380 = 141: 76$

Hence, the correct answer is option A.

Q. 48

Study the following information carefully and answer the following questions.

The given bar graph below shows the total number of cookies (sugar + macaroon) baked in 10's in five different bakeries namely A, B, C, D and E respectively and also the difference between the number of sugar and macaroon cookies baked in these five bakeries.

Note: The number of sugar cookies baked in all bakeries is more than that of macaroon cookies baked.

■ The total number of cookies baked in 10's

■ Difference between the number of sugar and macaroon cookies baked

Find the sum of the number of macaroon cookies baked in bakeries A, B and C.

- A) 815 ☒
- B) 890 ☒
- C) 840 ☒
- D) 720 ☒
- E) 780 ☒

In Bakery A:

The total number of cookies baked = 600

The number of sugar cookies baked = $(600 + 30)/2 = 315$

The number of macaroon cookies baked = $(600 - 315) = 285$

In Bakery B:

The total number of cookies baked = 700

The number of sugar cookies baked = $(700 + 80)/2 = 390$

The number of macaroon cookies baked = $(700 - 390) = 310$

In Bakery C:

The total number of cookies baked = 540

The number of sugar cookies baked = $(540 + 50)/2 = 295$

The number of macaroon cookies baked = $(540 - 295) = 245$

In Bakery D:

The total number of cookies baked = 800

The number of sugar cookies baked = $(800 + 40)/2 = 420$

The number of macaroon cookies baked = $(800 - 420) = 380$

In Bakery E:

The total number of cookies baked = 640

The number of sugar cookies baked = $(640 + 20)/2 = 330$

The number of macaroon cookies baked = $(640 - 330) = 310$

Explanation:

Bakery	The total number of cookies baked	The number of sugar cookies baked	The number of macaroon cookies baked
A	600	315	285
B	700	390	310
C	540	295	245
D	800	420	380
E	640	330	310

Answer: C

The sum of the number of macaroon cookies baked in bakeries A, B and C = $(285 + 310 + 245) = 840$

Hence, the correct answer is option C.

Q. 49

Read the following information carefully and answer the questions.

In a shop, three types of dry fruits, badam, pista, and walnut are sold. The marked price of per kilogram of badam, pista, and walnut is 25%, $33\frac{1}{3}\%$, and 50% more than their respective cost prices. The ratio of the cost price per kilogram of badam, pista, and walnut is 8:9:10, respectively. The profit percentages, calculated on the selling price of per kilogram of badam, pista, and walnut, are $11\frac{1}{9}\%$, $18\frac{2}{11}\%$, and 25%, respectively.

A customer buys 3 kg of pista and 2.5 kg of walnuts. Find the ratio of the discounts given on walnuts and pista, if the cost price per kg of walnut is Rs.450.

A) 25:18 B) 24:17 C) 18:25 D) 17:24 E) 11:32 

Let the cost prices of one kg of badam, pista and walnut be Rs.8x, Rs.9x and Rs.10x respectively.

The marked price of one kg of badam = 25% more than its cost price

$$= 125\% \text{ of Cost price of one kg of badam} = 125/100 * 8x = \text{Rs.}10x$$

The marked price of one kg of pista = 33(1/3)% more than its cost price

$$= (100/3 + 100)\% \text{ of Cost price of one kg of pista} = 400/3 * 1/100 * 9x = \text{Rs.}12x$$

The marked price of one kg of walnut = 50% more than its cost price

$$= 150\% \text{ of Cost price of one kg of walnut} = 150/100 * 10x = \text{Rs.}15x$$

Profit is calculated on the selling price:

$$\text{Selling price} = \text{Cost price} / (1 - \text{profit}\%)$$

$$\text{The selling price of one kg of badam} = 8x / (1 - 11(1/9)\%) = 8x / (1 - 1/9) = 8x / (8/9)$$

$$= 8x * 9/8 = \text{Rs.}9x$$

$$\text{The selling price of one kg of pista} = 9x / (1 - 18(2/11)\%) = 9x / (1 - 2/11) = 9x / (9/11)$$

$$= 9x * 11/9 = \text{Rs.}11x$$

$$\text{The selling price of one kg of walnut} = 10x / (1 - 25\%) = 10x / (1 - 1/4) = 10x / (3/4)$$

$$= 10x * 4/3 = \text{Rs.}(40x/3)$$

Explanation:

Answer: A

From the question,

$$\text{Cost price of one kg of walnut} = \text{Rs.}450$$

$$10x = 450$$

$$x = 45$$

$$\text{Marked price of one kg of walnut} = 15 * x = 15 * 45 = \text{Rs.} 675$$

$$\text{Selling price of one kg of walnut} = (40/3) * x = (40/3) * 45 = \text{Rs.} 600$$

$$\text{Discount given on one kg of walnut} = 675 - 600 = \text{Rs.} 75$$

$$\text{Total discount given on 2.5kg of walnut} = 2.5 * 75 = 187.5$$

$$\text{Marked price of one kg of pista} = 12 * x = 12 * 45 = \text{Rs.} 540$$

$$\text{Selling price of one kg of pista} = 11 * x = 11 * 45 = \text{Rs.} 495$$

$$\text{Discount given on one kg of pista} = 540 - 495 = \text{Rs.} 45$$

$$\text{Total discount given on 3kg of pista} = 3 * 45 = 135$$

$$\text{Required ratio} = 187.5:135 = 1875:1350 = 25:18$$

Hence, the correct option is A.

Q. 50

Read the following information carefully and answer the questions.

In a shop, three types of dry fruits, badam, pista, and walnut are sold. The marked price of per kilogram of badam, pista, and walnut is 25%, $33\frac{1}{3}\%$, and 50% more than their respective cost prices. The ratio of the cost price per kilogram of badam, pista, and walnut is 8:9:10, respectively. The profit percentages, calculated on the selling price of per kilogram of badam, pista, and walnut, are $11\frac{1}{9}\%$, $18\frac{2}{11}\%$, and 25%, respectively.

Aman bought 5 kg of badam and 4 kg of pista. If the shop gave an extra 10% discount on the total selling price and he paid Rs. 3204, find the overall initial profit amount earned on this sale.

- A) Rs.715 
- B) Rs.520 
- C) Rs.164 
- D) Rs.398 
- E) Rs.486 

Let the cost prices of one kg of badam, pista and walnut be Rs.8x, Rs.9x and Rs.10x respectively.

The marked price of one kg of badam = 25% more than its cost price

$$= 125\% \text{ of Cost price of one kg of badam} = 125/100 * 8x = \text{Rs.}10x$$

The marked price of one kg of pista = 33(1/3)% more than its cost price

$$= (100/3 + 100)\% \text{ of Cost price of one kg of pista} = 400/3 * 1/100 * 9x = \text{Rs.}12x$$

The marked price of one kg of walnut = 50% more than its cost price

$$= 150\% \text{ of Cost price of one kg of walnut} = 150/100 * 10x = \text{Rs.}15x$$

Profit is calculated on the selling price:

Selling price = Cost price/(1 – profit%)

$$\text{The selling price of one kg of badam} = 8x/(1 - 11(1/9)\%) = 8x/(1 - 1/9) = 8x/(8/9)$$

$$= 8x * 9/8 = \text{Rs.}9x$$

$$\text{The selling price of one kg of pista} = 9x/(1 - 18(2/11)\%) = 9x/(1 - 2/11) = 9x/(9/11)$$

$$= 9x * 11/9 = \text{Rs.}11x$$

$$\text{The selling price of one kg of walnut} = 10x/(1 - 25\%) = 10x/(1 - 1/4) = 10x/(3/4)$$

$$= 10x * 4/3 = \text{Rs.}(40x/3)$$

Answer: B

Explanation:

$$\text{Total actual selling price} = \text{Total selling price of 5 kg badam and 4 kg pista} = (5 * 9x) + (4 * 11x) = 45x + 44x = \text{Rs.}89x$$

The amount that the man paid = Rs. 3204 = amount paid after 10% discount given on the total actual selling price

$$90\% \text{ of the total actual selling price} = \text{Rs. } 3204$$

$$90/100 * 89x = 3204$$

$$89x = 3204 * 100/90$$

$$x = 3560/89 = 40$$

$$\text{Cost price of one kg badam} = 8x = 8 * 40 = \text{Rs. } 320$$

$$\text{Cost price of 5 kg badam} = 320 * 5 = \text{Rs. } 1600$$

$$\text{Cost price of one kg pista} = 9x = 9 * 40 = \text{Rs. } 360$$

$$\text{Cost price of 4 kg pista} = 360 * 4 = \text{Rs. } 1440$$

$$\text{Total cost price} = \text{Rs } 1600 + \text{Rs. } 1440 = \text{Rs. } 3040$$

$$90\% \text{ of the total actual selling price} = \text{Rs. } 3204$$

$$\text{The total actual selling price} = 3204 * (100/90) = \text{Rs. } 3560$$

$$\text{Overall initial profit amount earned on this sale} = 3560 - 3040 = \text{Rs. } 520$$

Hence, the correct option is B.

Q. 51

Read the following information carefully and answer the questions.

In a shop, three types of dry fruits, badam, pista, and walnut are sold. The marked price of per kilogram of badam, pista, and walnut is 25%, $33\frac{1}{3}\%$, and 50% more than their respective cost prices. The ratio of the cost price per kilogram of badam, pista, and walnut is 8:9:10, respectively. The profit percentages, calculated on the selling price of per kilogram of badam, pista, and walnut, are $11\frac{1}{9}\%$, $18\frac{2}{11}\%$, and 25%, respectively.

If the selling price of 10 kg of badam is Rs.5400, find the combined marked price of 1 kg of walnut and 1 kg of pista.

A) Rs. 1620

B) Rs. 1650

C) Rs. 1440

D) Rs. 1580

E) Rs. 1540

Let the cost prices of one kg of badam, pista and walnut be Rs.8x, Rs.9x and Rs.10x respectively.

The marked price of one kg of badam = 25% more than its cost price

$$= 125\% \text{ of Cost price of one kg of badam} = 125/100 * 8x = \text{Rs.}10x$$

The marked price of one kg of pista = 33(1/3)% more than its cost price

$$= (100/3 + 100)\% \text{ of Cost price of one kg of pista} = 400/3 * 1/100 * 9x = \text{Rs.}12x$$

The marked price of one kg of walnut = 50% more than its cost price

$$= 150\% \text{ of Cost price of one kg of walnut} = 150/100 * 10x = \text{Rs.}15x$$

Profit is calculated on the selling price:

Selling price = Cost price/(1 – profit%)

$$\text{The selling price of one kg of badam} = 8x/(1 - 11(1/9)\%) = 8x/(1 - 1/9) = 8x/(8/9)$$

$$= 8x * 9/8 = \text{Rs.}9x$$

$$\text{The selling price of one kg of pista} = 9x/(1 - 18(2/11)\%) = 9x/(1 - 2/11) = 9x/(9/11)$$

$$= 9x * 11/9 = \text{Rs.}11x$$

$$\text{The selling price of one kg of walnut} = 10x/(1 - 25\%) = 10x/(1 - 1/4) = 10x/(3/4)$$

$$= 10x * 4/3 = \text{Rs.}(40x/3)$$

Answer: A

$$\text{Selling price of 10 kg of badam} = \text{Rs. } 5400$$

$$\text{Selling price of 1 kg of badam} = 5400/10 = \text{Rs. } 540$$

From the given data,

$$\text{Selling price of 1 kg of badam} = \text{Rs.}9x$$

$$9x = 540$$

$$x = 540/9 = 60$$

$$\text{Marked price of 1 kg of pista} = 12x = 12 * 60 = \text{Rs. } 720$$

$$\text{Marked price of 1 kg of walnut} = 15x = 15 * 60 = \text{Rs. } 900$$

$$\text{Required sum} = 720 + 900 = \text{Rs. } 1620$$

Hence, the correct option is A.

Explanation:

Q. 52

The income of Ana is $\frac{9}{5}$ th of the expenditure of Banu, and the income of Ana is Rs. 1000 more than that of Banu and the expenditure of Ana is Rs. 9000. If the savings of Ana and Banu are equal, then find the expenditure of Banu.

- A) Rs. 7200 
- B) Rs. 9800 
- C) Rs. 9000 
- D) Rs. 5600 
- E) Rs. 8000 

Explanation:**Answer: E**

Let, the income of Ana = Rs. $9x$

The income of Banu = Rs. $(9x - 1000)$

The expenditure of Banu = Rs. $5x$

The savings of Banu = $(9x - 1000 - 5x) = \text{Rs. } (4x - 1000)$

$$9x - (4x - 1000) = 9000$$

$$5x + 1000 = 9000$$

$$5x = 8000$$

$$x = 1600$$

$$\text{The expenditure of Banu} = 5 * 1600 = \text{Rs. } 8000$$

Hence, the correct answer is option E.

Q. 53

The height and volume of the cylinder is 8 cm and 1232 cm^3 . If the side of the square is 2 cm less than the radius of the cylinder, then find the area of the square.

- A) 36 cm^2 
- B) 25 cm^2 
- C) 49 cm^2 
- D) 81 cm^2 
- E) 16 cm^2 

Answer: B

Let, the height of the cylinder = 8 cm

The volume of the cylinder = $\pi r^2 h \text{ cm}^2$

$$1232 = (22/7) * r^2 * 8$$

$$r^2 = 49$$

$$r = 7$$

The side of the square = $(7 - 2) = 5 \text{ cm}$

The area of the square = $a^2 = 5^2 = 25 \text{ cm}$

Hence, the correct answer is option B.

Explanation:

Q. 54

Rs. 9200 is invested in simple interest at the rate of 25% per annum for n years, then the interest received is Rs. 6900. If Rs. 2000 is invested in compound interest at the rate of 10% per annum for (n - 1) years, then find the compound interest received.

A) Rs. 420 ✓

B) Rs. 380 ✗

C) Rs. 560 ✗

D) Rs. 1200 ✗

E) Rs. 980 ✗

Explanation:**Answer: A**

$$SI = PNR/100$$

$$6900 = 9200 \times 25/100 \times n$$

$$n = 3$$

$$(n - 1) = (3 - 1) = 2$$

$$CI = P \times (1 + R/100)^n - P$$

$$CI = 2000 \times 1.1 \times 1.1 - 2000$$

$$CI = \text{Rs. } 420$$

Hence, the correct answer is option A.

Q. 55

A and B started a business by investing Rs. 12000 together. B invested Rs. 3000 less than that of A and the investment period of A and B is x and y respectively. If the ratio of the profit share of B to A is 6:5, then find the ratio of x to y.

A) 2:1 B) 3:4 C) 1:2 D) 8:7 E) 5:6 **Answer: C**

The initial investment of A = $(12000 + 3000)/2 = \text{Rs. } 7500$

The initial investment of B = $(12000 - 7500) = \text{Rs. } 4500$

The ratio of the profit share of A and B = $(7500 * x) / (4500 * y) = 5/6$

Explanation:

$$5x/3y = 5/6$$

$$x/y = 1/2$$

Required ratio = 1:2

Hence, the correct answer is option C.

Q. 56

Out of two numbers, six times the smaller number is 8 more than four times the larger number. If the sum of the two numbers is 8 more than twice the difference of two numbers. Find the sum of two numbers.

A) 5 B) 6 C) 11 D) 13 E) 8 **Answer: E**

Let the smaller number be y and the larger number be x

$$6y = 4x + 8$$

$$6y - 4x = 8 \text{ ----> (1)}$$

$$x + y = 2(x - y) + 8$$

$$x + y = 2x - 2y + 8$$

$$x - 3y = -8 \text{ ----> (2)}$$

Solving equation 1 & 2, we get $x = 4$ and $y = 4$

$$\text{Required sum} = (4 + 4) = 8$$

Hence, the correct answer is option E.

Explanation:

Q. 57

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give answer as,

i) $x^2 - 19x + 84 = 0$

ii) $y^2 - 13y + 42 = 0$

A) $x > y$ 

B) $x \geq y$ 

C) $x = y$ or relationship can't be determined. 

D) $x < y$ 

E) $x \leq y$ 

Explanation:

Answer: B

i) $x^2 - 19x + 84 = 0$

$x^2 - 12x - 7x + 84 = 0$

$x(x - 12) - 7(x - 12) = 0$

$(x - 12)(x - 7) = 0$

$x = 12, 7$

ii) $y^2 - 13y + 42 = 0$

$y^2 - 6y - 7y + 42 = 0$

$y(y - 6) - 7(y - 6) = 0$

$(y - 6)(y - 7) = 0$

$y = 6, 7$

Hence, $x \geq y$

Hence, the correct answer is option B.

Q. 58

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give answer as,

i) $2x^2 - 18x + 40 = 0$

ii) $y^2 - 15y + 56 = 0$

A) $x > y$ 

B) $x \geq y$ 

C) $x = y$ or relationship can't be determined. 

D) $x < y$ 

E) $x \leq y$ 

Explanation:

Answer: D

i) $2x^2 - 18x + 40 = 0$

$2x^2 - 10x - 8x + 40 = 0$

$2x(x - 5) - 8(x - 5) = 0$

$(2x - 8)(x - 5) = 0$

$x = 5, 4$

ii) $y^2 - 15y + 56 = 0$

$y^2 - 7y - 8y + 56 = 0$

$y(y - 7) - 8(y - 7) = 0$

$(y - 7)(y - 8) = 0$

$y = 7, 8$

Hence, $x < y$

Hence, the correct answer is option D.

Q. 59

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give answer as,

i) $x^2 - 24x + 128 = 0$

ii) $y^2 - 16y + 63 = 0$

A) $x > y$ 

B) $x \geq y$ 

C) $x = y$ or relationship can't be determined. 

D) $x < y$ 

E) $x \leq y$ 

Explanation:

Answer: C

i) $x^2 - 24x + 128 = 0$

$x^2 - 16x - 8x + 128 = 0$

$x(x - 16) - 8(x - 16) = 0$

$(x - 16)(x - 8) = 0$

$x = 16, 8$

ii) $y^2 - 16y + 63 = 0$

$y^2 - 9y - 7y + 63 = 0$

$y(y - 9) - 7(y - 9) = 0$

$(y - 9)(y - 7) = 0$

$y = 9, 7$

Hence, $x = y$ or relationship cannot be determined

Hence, the correct answer is option C.

Q. 60

The following question contains two equations as I and II. You have to solve both equations and determine the relationship between them and give answer as,

i) $x^2 + 16x + 55 = 0$

ii) $y^2 + 22y + 120 = 0$

A) $x > y$ 

B) $x \geq y$ 

C) $x = y$ or relationship can't be determined. 

D) $x < y$ 

E) $x \leq y$ 

Explanation:

Answer: C

i) $x^2 + 16x + 55 = 0$

$x^2 + 11x + 5x + 55 = 0$

$x(x + 11) + 5(x + 11) = 0$

$(x + 11)(x + 5) = 0$

$x = -11, -5$

ii) $y^2 + 22y + 120 = 0$

$y^2 + 10y + 12y + 120 = 0$

$y(y + 10) + 12(y + 10) = 0$

$(y + 10)(y + 12) = 0$

$y = -10, -12$

Hence, $x = y$ or relationship cannot be determined

Hence, the correct answer is option C.

Q. 61

What approximate value should come in the place of (?) in the following questions.

$$22.12 * 8.12 - 3.12 * \sqrt{9.01} = ? - 11.12 * 2.12$$

- A) 198 
- B) 215 
- C) 156 
- D) 134 
- E) 189 

Explanation:

Answer: E

$$22.12 * 8.12 - 3.12 * \sqrt{9.01} = ? - 11.12 * 2.12$$

$$22 * 8 - 3 * 3 = ? - 11 * 2$$

$$176 - 9 = ? - 22$$

$$? = 176 - 9 + 22$$

$$? = 189$$

Hence, the correct answer is option E.

Q. 62

What approximate value should come in the place of (?) in the following questions.

$$25.01 * 4.12 + (196.12)^{1/2} - 126.12 = ?$$

- A) -8 
- B) -18 
- C) 10 
- D) -12 
- E) 24 

Explanation:

Answer: D

$$25.01 * 4.12 + (196.12)^{1/2} - 126.12 = ?$$

$$25 * 4 + 14 - 126 = ?$$

$$100 + 14 - 126 = ?$$

$$? = -12$$

Hence, the correct answer is option D.

Q. 63

What approximate value should come in the place of (?) in the following questions.

$$?^2 * 2 - 16.12 = 42.12\% \text{ of } 800.12 - 320.12\% \text{ of } 20.12$$

A) 18 B) 8 C) 22 D) 19 E) 12 **Explanation:****Answer: E**

$$?^2 * 2 - 16.12 = 42.12\% \text{ of } 800.12 - 320.12\% \text{ of } 20.12$$

$$?^2 * 2 - 16 = 42\% \text{ of } 800 - 320\% \text{ of } 20$$

$$?^2 * 2 - 16 = 336 - 64$$

$$?^2 * 2 = 272 + 16$$

$$?^2 = 144$$

$$? = 12$$

Hence, the correct answer is option E.

Q. 64

What approximate value should come in the place of (?) in the following questions.

$$12.12\% \text{ of } 450.12 + 125.12 = ?/1.98$$

A) 228 B) 345 C) 358 D) 190 E) 198 **Explanation:****Answer: C**

$$12.12\% \text{ of } 450.12 + 125.12 = ?/1.98$$

$$12\% \text{ of } 450 + 125 = ?/2$$

$$54 + 125 = ?/2$$

$$179 * 2 = ?$$

$$? = 358$$

Hence, the correct answer is option C.

Q. 65

What approximate value should come in the place of (?) in the following questions.

$$80.12\% \text{ of } 200.12 + 15.12 * 3.2 = ?$$

A) 215 B) 198 C) 324 D) 205 E) 200 **Explanation:****Answer: D**

$$80.12\% \text{ of } 200.12 + 15.12 * 3.2 = ?$$

$$80\% \text{ of } 200 + 15 * 3 = ?$$

$$160 + 45 = ?$$

$$? = 205$$

Hence, the correct answer is option D.

Reasoning Ability

Q. 66

Study the following information carefully and answer the questions given below:

Fourteen persons are sitting in two parallel rows containing seven persons each in such a way that there is an equal distance between adjacent persons. In row 1: A, B, C, D, E, F and G are seated and all of them are facing south. In row 2: T, U, V, W, X, Y and Z are seated and all of them are facing north. Each person in row 1 faces another person in row 2.

Only three persons sit between C and the one who faces Z, who doesn't

sit at the end of the row. At least two persons sit to the left of Z. X faces the one who sits immediate right of C. As many persons sit to the left of E as sit to the right of V. V is neither adjacent nor sits to the right of Z. Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X. G sits immediate left of B. As many persons sit between T and Y as between A and F. T neither faces B nor sits adjacent to V. D sits immediate right of F but doesn't face X. X doesn't sit to the left of W.

Who among the following persons sit to the left of F?

I). C

II). E

III). B

A) Only I and II

B) Only II and III

C) Only I and III

D) All I, II and III

E) Only III

Explanation:**Final arrangement:**

We have,

- Only three persons sit between C and the one who faces Z, who doesn't sit at the end of the row.
- At least two persons sit to the left of Z.
- X faces the one who sits immediate right of C.

From the above conditions there are two possibilities.

Again we have,

- As many persons sit to the left of E as to the right of V.
- V is neither adjacent nor sits to the right of Z.
- Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X.
- G sits immediate left of B.

From the above conditions, Case-1 gets split into another case as Case-1a.

Again we have,

- As many persons sit between T and Y as sit between A and F.

- T neither faces B nor sits adjacent to V.
- D sits immediate right of F but doesn't face X.
- X doesn't sit to the left of W.

From the above conditions case-1 gets eliminated because X doesn't sit to the left of W, which is not satisfied and Case-1a also get eliminated because D sits immediate right of F, which is also not satisfied. Hence case-2 shows the final arrangement

Answer: C

Q. 67

Study the following information carefully and answer the questions given below:

Fourteen persons are sitting in two parallel rows containing seven persons each in such a way that there is an equal distance between adjacent persons. In row 1: A, B, C, D, E, F and G are seated and all of them are facing south. In row 2: T, U, V, W, X, Y and Z are seated and all of them are facing north. Each person in row 1 faces another person in row 2.

Only three persons sit between C and the one who faces Z, who doesn't

sit at the end of the row. At least two persons sit to the left of Z. X faces the one who sits immediate right of C. As many persons sit to the left of E as sit to the right of V. V is neither adjacent nor sits to the right of Z. Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X. G sits immediate left of B. As many persons sit between T and Y as between A and F. T neither faces B nor sits adjacent to V. D sits immediate right of F but doesn't face X. X doesn't sit to the left of W.

If X is related to B and U is related to E in a certain way as per the final arrangement, who among the following person is related to W?

- A) The one who sits opposite to V 
- B) The one who sits opposite to T 
- C) The one who sits opposite to Y 
- D) The one who sits opposite to Z 
- E) The one who sits opposite to X 

Explanation:**Final arrangement:**

We have,

- Only three persons sit between C and the one who faces Z, who doesn't sit at the end of the row.
- At least two persons sit to the left of Z.
- X faces the one who sits immediate right of C.

From the above conditions there are two possibilities.

Again we have,

- As many persons sit to the left of E as to the right of V.
- V is neither adjacent nor sits to the right of Z.
- Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X.
- G sits immediate left of B.

From the above conditions, Case-1 gets split into another case as Case-1a.

Again we have,

- As many persons sit between T and Y as sit between A and F.

- T neither faces B nor sits adjacent to V.
- D sits immediate right of F but doesn't face X.
- X doesn't sit to the left of W.

From the above conditions case-1 gets eliminated because X doesn't sit to the left of W, which is not satisfied and Case-1a also get eliminated because D sits immediate right of F, which is also not satisfied. Hence case-2 shows the final arrangement

Answer: D

Q. 68

Study the following information carefully and answer the questions given below:

Fourteen persons are sitting in two parallel rows containing seven persons each in such a way that there is an equal distance between adjacent persons. In row 1: A, B, C, D, E, F and G are seated and all of them are facing south. In row 2: T, U, V, W, X, Y and Z are seated and all of them are facing north. Each person in row 1 faces another person in row 2.

Only three persons sit between C and the one who faces Z, who doesn't

sit at the end of the row. At least two persons sit to the left of Z. X faces the one who sits immediate right of C. As many persons sit to the left of E as sit to the right of V. V is neither adjacent nor sits to the right of Z. Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X. G sits immediate left of B. As many persons sit between T and Y as between A and F. T neither faces B nor sits adjacent to V. D sits immediate right of F but doesn't face X. X doesn't sit to the left of W.

How many persons sit between the one who sits third to the left of the one who faces G and second to the right of the one who faces A?

A) None 

B) One 

C) Two 

D) Three 

E) Four 

Explanation:**Final arrangement:**

We have,

- Only three persons sit between C and the one who faces Z, who doesn't sit at the end of the row.
- At least two persons sit to the left of Z.
- X faces the one who sits immediate right of C.

From the above conditions there are two possibilities.

Again we have,

- As many persons sit to the left of E as to the right of V.
- V is neither adjacent nor sits to the right of Z.
- Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X.
- G sits immediate left of B.

From the above conditions, Case-1 gets split into another case as Case-1a.

Again we have,

- As many persons sit between T and Y as sit between A and F.

- T neither faces B nor sits adjacent to V.
- D sits immediate right of F but doesn't face X.
- X doesn't sit to the left of W.

From the above conditions case-1 gets eliminated because X doesn't sit to the left of W, which is not satisfied and Case-1a also get eliminated because D sits immediate right of F, which is also not satisfied. Hence case-2 shows the final arrangement

Answer: A

Q. 69

Study the following information carefully and answer the questions given below:

Fourteen persons are sitting in two parallel rows containing seven persons each in such a way that there is an equal distance between adjacent persons. In row 1: A, B, C, D, E, F and G are seated and all of them are facing south. In row 2: T, U, V, W, X, Y and Z are seated and all of them are facing north. Each person in row 1 faces another person in row 2.

Only three persons sit between C and the one who faces Z, who doesn't

sit at the end of the row. At least two persons sit to the left of Z. X faces the one who sits immediate right of C. As many persons sit to the left of E as sit to the right of V. V is neither adjacent nor sits to the right of Z. Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X. G sits immediate left of B. As many persons sit between T and Y as between A and F. T neither faces B nor sits adjacent to V. D sits immediate right of F but doesn't face X. X doesn't sit to the left of W.

Four of the following five are alike in a certain way based on the given arrangement and thus form a group. Which one of the following does not belong to the group?

A) The one who sits second to the right of D 

B) The one who sits second to the left of W 

C) The one who sits third to the left of F 

D) The one who sits to the immediate left of U 

E) The one who sits to the immediate right of X 

Explanation:**Final arrangement:**

We have,

- Only three persons sit between C and the one who faces Z, who doesn't sit at the end of the row.
- At least two persons sit to the left of Z.
- X faces the one who sits immediate right of C.

From the above conditions there are two possibilities.

Again we have,

- As many persons sit to the left of E as to the right of V.
- V is neither adjacent nor sits to the right of Z.
- Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X.
- G sits immediate left of B.

From the above conditions, Case-1 gets split into another case as Case-1a.

Again we have,

- As many persons sit between T and Y as sit between A and F.

- T neither faces B nor sits adjacent to V.
- D sits immediate right of F but doesn't face X.
- X doesn't sit to the left of W.

From the above conditions case-1 gets eliminated because X doesn't sit to the left of W, which is not satisfied and Case-1a also get eliminated because D sits immediate right of F, which is also not satisfied. Hence case-2 shows the final arrangement

Answer: B (All the persons in the given options are sitting at the extreme ends of the row except option B)

Q. 70

Study the following information carefully and answer the questions given below:

Fourteen persons are sitting in two parallel rows containing seven persons each in such a way that there is an equal distance between adjacent persons. In row 1: A, B, C, D, E, F and G are seated and all of them are facing south. In row 2: T, U, V, W, X, Y and Z are seated and all of them are facing north. Each person in row 1 faces another person in row 2.

Only three persons sit between C and the one who faces Z, who doesn't

sit at the end of the row. At least two persons sit to the left of Z. X faces the one who sits immediate right of C. As many persons sit to the left of E as sit to the right of V. V is neither adjacent nor sits to the right of Z. Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X. G sits immediate left of B. As many persons sit between T and Y as between A and F. T neither faces B nor sits adjacent to V. D sits immediate right of F but doesn't face X. X doesn't sit to the left of W.

As many persons sit to the left of A as to the left of __?

- A) V 
- B) U 
- C) G 
- D) Y 
- E) X 

Explanation:**Final arrangement:**

We have,

- Only three persons sit between C and the one who faces Z, who doesn't sit at the end of the row.
- At least two persons sit to the left of Z.
- X faces the one who sits immediate right of C.

From the above conditions there are two possibilities.

Again we have,

- As many persons sit to the left of E as to the right of V.
- V is neither adjacent nor sits to the right of Z.
- Only two persons sit between the one who faces B and U, who doesn't sit adjacent to X.
- G sits immediate left of B.

From the above conditions, Case-1 gets split into another case as Case-1a.

Again we have,

- As many persons sit between T and Y as sit between A and F.

- T neither faces B nor sits adjacent to V.
- D sits immediate right of F but doesn't face X.
- X doesn't sit to the left of W.

From the above conditions case-1 gets eliminated because X doesn't sit to the left of W, which is not satisfied and Case-1a also get eliminated because D sits immediate right of F, which is also not satisfied. Hence case-2 shows the final arrangement

Answer: E

Q. 71

Study the following information carefully and answer the given questions.

An uncertain number of persons are sitting in a linear row and facing north. Not more than 21 persons sit in a row.

Six persons sit between R and M. A sits third to the left of M. As many persons sit between R and A as between C and R. Only one person sits between C and E, who sits to the left of C. B sits fifth to the left of E and to the immediate right of T. The number of persons sitting to the left of T is one less than the number of persons sitting to the right of M.

How many persons sit in the linear row in the final arrangement?A) 18 B) 21 C) 19 D) 20 E) 17 

Final arrangement:

We have,

- Six persons sit between R and M.
- A sits third to the left of M.

From the above conditions, there are two possibilities

Again, we have,

- As many persons sit between R and A as between C and R.
- Only one person sits between C and E, who sits to the left of C.

Explanation:

Again, we have,

- B sits fifth to the left of E and to the immediate right of T.
- The number of persons sitting to the left of T is one less than the number of persons sitting to the right of M.

From the above conditions, case 2 gets eliminated because the number of persons sitting to the left of T is one less than the number of persons sitting to the right of M, which is not satisfied. Hence, case 1 shows the final arrangement.

Answer: B

Q. 72

Study the following information carefully and answer the given questions.

An uncertain number of persons are sitting in a linear row and facing north. Not more than 21 persons sit in a row.

Six persons sit between R and M. A sits third to the left of M. As many persons sit between R and A as between C and R. Only one person sits between C and E, who sits to the left of C. B sits fifth to the left of E and to the immediate right of T. The number of persons sitting to the left of T is one less than the number of persons sitting to the right of M.

Who among the following person sits to the left of E?A) C B) A C) B D) M E) R 

Final arrangement:

We have,

- Six persons sit between R and M.
- A sits third to the left of M.

From the above conditions, there are two possibilities

Again, we have,

- As many persons sit between R and A as between C and R.
- Only one person sits between C and E, who sits to the left of C.

Explanation:

Again, we have,

- B sits fifth to the left of E and to the immediate right of T.
- The number of persons sitting to the left of T is one less than the number of persons sitting to the right of M.

From the above conditions, case 2 gets eliminated because the number of persons sitting to the left of T is one less than the number of persons sitting to the right of M, which is not satisfied. Hence, case 1 shows the final arrangement.

Answer: C

Q. 73

Study the following information carefully and answer the given questions.

An uncertain number of persons are sitting in a linear row and facing north. Not more than 21 persons sit in a row.

Six persons sit between R and M. A sits third to the left of M. As many persons sit between R and A as between C and R. Only one person sits between C and E, who sits to the left of C. B sits fifth to the left of E and to the immediate right of T. The number of persons sitting to the left of T is one less than the number of persons sitting to the right of M.

Who among the following person sits at the extreme left end of the row?

- A) M 
- B) E 
- C) B 
- D) T 
- E) C 

Final arrangement:

We have,

- Six persons sit between R and M.
- A sits third to the left of M.

From the above conditions, there are two possibilities

Again, we have,

- As many persons sit between R and A as between C and R.
- Only one person sits between C and E, who sits to the left of C.

Explanation:

Again, we have,

- B sits fifth to the left of E and to the immediate right of T.
- The number of persons sitting to the left of T is one less than the number of persons sitting to the right of M.

From the above conditions, case 2 gets eliminated because the number of persons sitting to the left of T is one less than the number of persons sitting to the right of M, which is not satisfied. Hence, case 1 shows the final arrangement.

Answer: D

Q. 74

Study the following information carefully and answer the given questions.

Seven persons - G, M, N, O, P, Q, and R buy a thing on seven different days of the same week starting from Monday to Sunday. Only one person buys a thing each day. Each person has a different number of pens. One of them has 30 pens.

G buys on one of the days after Thursday. Only two persons buy between G and the one with 17 pens. M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens. M does not buy immediately after the one with 17 pens. N, who has six pens less than M, buys immediately before O. N does not buy on Wednesday. The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N. P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing. The difference between the number of pens with R and Q is 11. The sum of the number of pens with R and the one who buys at last is 47.

How many pens with the one who buys on Monday?A) $3 \times 3 \times 3$ B) $1 + (4 \times 4)$ C) $(5 \times 5) + 5 + 6$ D) $(20 - 6) + 5$ E) $(10 \times 2) + (4 \times 5)$ 

Explanation:**Final arrangement:**

Days	Persons	Pens
Monday	N	19
Tuesday	O	30
Wednesday	R	18
Thursday	P	17
Friday	Q	7
Saturday	M	25
Sunday	G	29

We have,

- G buys on one of the days after Thursday.
- Only two persons buy between G and the one with 17 pens.
- M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens.
- M doesn't buy immediately after the one with 17 pens.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday				(Even)		
Tuesday		17				(Even)
Wednesday		(Even)		17		
Thursday						17
Friday	G		M	25		
Saturday			G		M	25
Sunday	M	25			G	

Again, we have,

- N, who has six pens less than M, buys immediately before O.
- N does not buy on Wednesday.

- The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N.

From the above conditions, case-1 gets eliminated because the number of persons buying before O is one more than the number of persons buying after the one with ten pens more than N, which is not satisfied.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday	N	19		(Even)	N	19
Tuesday	O	17	N	19	O	(Even)
Wednesday		(Even)	O	17		
Thursday						17
Friday	G		M	25		
Saturday			G	29	M	25
Sunday	M	25			G	29

Again, we have,

- P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing.
- The difference between the number of pens with R and Q is 11.
- The sum of the number of pens with R and the one who buys at last is 47.

From the above conditions, case-2 gets eliminated because the sum of the number of pens with R and the one who buys at last is 47, which is not satisfied. Hence, case-3 shows the final arrangement.

	Case 2		Case 3	
Days	Persons	Pens	Persons	Pens
Monday	P	Even/ Prime	N	19
Tuesday	N	19	O	30
Wednesday	O	17	R	18
Thursday	Q		P	17
Friday	M	25	Q	7
Saturday	G	29	M	25
Sunday	R		G	29

Answer: D

Q. 75

Study the following information carefully and answer the given questions.

Seven persons - G, M, N, O, P, Q, and R buy a thing on seven different days of the same week starting from Monday to Sunday. Only one person buys a thing each day. Each person has a different number of pens. One of them has 30 pens.

G buys on one of the days after Thursday. Only two persons buy between G and the one with 17 pens. M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens. M does not buy immediately after the one with 17 pens. N, who has six pens less than M, buys immediately before O. N does not buy on Wednesday. The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N. P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing. The difference between the number of pens with R and Q is 11. The sum of the number of pens with R and the one who buys at last is 47.

As many persons buy before R as after ____.

- A) The one who has 25 pens 
- B) The one who has 7 pens 
- C) The one who has 30 pens 
- D) The one who has 19 pens 
- E) The one who has 27 pens 

Explanation:**Final arrangement:**

Days	Persons	Pens
Monday	N	19
Tuesday	O	30
Wednesday	R	18
Thursday	P	17
Friday	Q	7
Saturday	M	25
Sunday	G	29

We have,

- G buys on one of the days after Thursday.
- Only two persons buy between G and the one with 17 pens.
- M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens.
- M doesn't buy immediately after the one with 17 pens.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday				(Even)		
Tuesday		17				(Even)
Wednesday		(Even)		17		
Thursday						17
Friday	G		M	25		
Saturday			G		M	25
Sunday	M	25			G	

Again, we have,

- N, who has six pens less than M, buys immediately before O.
- N does not buy on Wednesday.

- The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N.

From the above conditions, case-1 gets eliminated because the number of persons buying before O is one more than the number of persons buying after the one with ten pens more than N, which is not satisfied.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday	N	19		(Even)	N	19
Tuesday	O	17	N	19	O	(Even)
Wednesday		(Even)	O	17		
Thursday						17
Friday	G		M	25		
Saturday			G	29	M	25
Sunday	M	25			G	29

Again, we have,

- P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing.
- The difference between the number of pens with R and Q is 11.
- The sum of the number of pens with R and the one who buys at last is 47.

From the above conditions, case-2 gets eliminated because the sum of the number of pens with R and the one who buys at last is 47, which is not satisfied. Hence, case-3 shows the final arrangement.

	Case 2		Case 3	
Days	Persons	Pens	Persons	Pens
Monday	P	Even/ Prime	N	19

Wednesday	O	17	R	18
Thursday	Q		P	17
Friday	M	25	Q	7
Saturday	G	29	M	25
Sunday	R		G	29

Answer: B

Q. 76

Study the following information carefully and answer the given questions.

Seven persons - G, M, N, O, P, Q, and R buy a thing on seven different days of the same week starting from Monday to Sunday. Only one person buys a thing each day. Each person has a different number of pens. One of them has 30 pens.

G buys on one of the days after Thursday. Only two persons buy between G and the one with 17 pens. M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens. M does not buy immediately after the one with 17 pens. N, who has six pens less than M, buys immediately before O. N does not buy on Wednesday. The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N. P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing. The difference between the number of pens with R and Q is 11. The sum of the number of pens with R and the one who buys at last is 47.

How many persons buy between Q and the one who has 29 pens?

- A) None 
- B) Three 
- C) One 
- D) Two 
- E) None of these 

Explanation:**Final arrangement:**

Days	Persons	Pens
Monday	N	19
Tuesday	O	30
Wednesday	R	18
Thursday	P	17
Friday	Q	7
Saturday	M	25
Sunday	G	29

We have,

- G buys on one of the days after Thursday.
- Only two persons buy between G and the one with 17 pens.
- M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens.
- M doesn't buy immediately after the one with 17 pens.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday				(Even)		
Tuesday		17				(Even)
Wednesday		(Even)		17		
Thursday						17
Friday	G		M	25		
Saturday			G		M	25
Sunday	M	25			G	

Again, we have,

- N, who has six pens less than M, buys immediately before O.
- N does not buy on Wednesday.

- The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N.

From the above conditions, case-1 gets eliminated because the number of persons buying before O is one more than the number of persons buying after the one with ten pens more than N, which is not satisfied.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday	N	19		(Even)	N	19
Tuesday	O	17	N	19	O	(Even)
Wednesday		(Even)	O	17		
Thursday						17
Friday	G		M	25

Answer: C

Q. 77

Study the following information carefully and answer the given questions.

Seven persons - G, M, N, O, P, Q, and R buy a thing on seven different days of the same week starting from Monday to Sunday. Only one person buys a thing each day. Each person has a different number of pens. One of them has 30 pens.

G buys on one of the days after Thursday. Only two persons buy between G and the one with 17 pens. M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens. M does not buy immediately after the one with 17 pens. N, who has six pens less than M, buys immediately before O. N does not buy on Wednesday. The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N. P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing. The difference between the number of pens with R and Q is 11. The sum of the number of pens with R and the one who buys at last is 47.

What is the sum of the number of pens with R and N?

- A) 63 
- B) 53 
- C) 44 
- D) 36 
- E) 37 

Explanation:**Final arrangement:**

Days	Persons	Pens
Monday	N	19
Tuesday	O	30
Wednesday	R	18
Thursday	P	17
Friday	Q	7
Saturday	M	25
Sunday	G	29

We have,

- G buys on one of the days after Thursday.
- Only two persons buy between G and the one with 17 pens.
- M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens.
- M doesn't buy immediately after the one with 17 pens.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday				(Even)		
Tuesday		17				(Even)
Wednesday		(Even)		17		
Thursday						17
Friday	G		M	25		
Saturday			G		M	25
Sunday	M	25			G	

Again, we have,

- N, who has six pens less than M, buys immediately before O.
- N does not buy on Wednesday.

- The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N.

From the above conditions, case-1 gets eliminated because the number of persons buying before O is one more than the number of persons buying after the one with ten pens more than N, which is not satisfied.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday	N	19		(Even)	N	19

Answer: E

Q. 78

Study the following information carefully and answer the given questions.

Seven persons - G, M, N, O, P, Q, and R buy a thing on seven different days of the same week starting from Monday to Sunday. Only one person buys a thing each day. Each person has a different number of pens. One of them has 30 pens.

G buys on one of the days after Thursday. Only two persons buy between G and the one with 17 pens. M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens. M does not buy immediately after the one with 17 pens. N, who has six pens less than M, buys immediately before O. N does not buy on Wednesday. The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N. P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing. The difference between the number of pens with R and Q is 11. The sum of the number of pens with R and the one who buys at last is 47.

Who among the following person has the least number of pens?A) The one who buys on Friday B) The one who buys on Wednesday C) The one who buys on Monday D) The one who buys on Thursday E) The one who buys on Tuesday 

Explanation:**Final arrangement:**

Days	Persons	Pens
Monday	N	19
Tuesday	O	30
Wednesday	R	18
Thursday	P	17
Friday	Q	7
Saturday	M	25
Sunday	G	29

We have,

- G buys on one of the days after Thursday.
- Only two persons buy between G and the one with 17 pens.
- M, who has 8 pens more than the one who buys three persons before G, buys four persons after the one with an even number of pens.
- M doesn't buy immediately after the one with 17 pens.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday				(Even)		
Tuesday		17				(Even)
Wednesday		(Even)		17		
Thursday						17
Friday	G		M	25		
Saturday			G		M	25
Sunday	M	25			G	

Again, we have,

- N, who has six pens less than M, buys immediately before O.
- N does not buy on Wednesday.

- The number of persons buying before O is **one more than** the number of persons buying after the one with ten pens more than N.

From the above conditions, case-1 gets eliminated because the number of persons buying before O is one more than the number of persons buying after the one with ten pens more than N, which is not satisfied.

	Case 1		Case 2		Case 3	
Days	Persons	Pens	Persons	Pens	Persons	Pens
Monday	N	19		(Even)	N	19
Tuesday	O	17	N	19	O	(Even)
Wednesday		(Even)	O	17		
Thursday						17
Friday	G		M	25		
Saturday			G	29	M	25
Sunday	M	25			G	29

Again, we have,

- P, who has a prime number of pens, buys before Q, who is not the last one to buy a thing.
- The difference between the number of pens with R and Q is 11.
- The sum of the number of pens with R and the one who buys at last is 47.

From the above conditions, case-2 gets eliminated because the sum of the number of pens with R and the one who buys at last is 47, which is not satisfied. Hence, case-3 shows the final arrangement.

	Case 2		Case 3

Answer: A

Q. 79

Study the following information carefully and answer the given questions.

Nine persons - A, B, C, D, E, F, G, H and I were born in different years i.e., 1991, 1995, 1998, 2002, 2006, 2008, 2013, 2015, 2020.

Note I: The age of each person is calculated with respect to the year 2025.

Note II: All the persons were born on the same date and same month.

Note III: The age of the person is only in years.

H's age is a prime number. The sum of the ages of D and B is equal to the age of H. Only four persons were born between B and A. G is four years older than A. The sum of the ages of G and I is 61 years. The difference between the age of E and F is a perfect square. E is 11 years younger than C.

As many persons were older than ____ as younger ____.

A) C, F 

B) A, C 

C) I, D 

D) E, B 

E) F, A 

Explanation:**Final arrangement:**

Years	Age	Persons
1991	34	I
1995	30	C
1998	27	G
2002	23	A
2006	19	E
2008	17	H
2013	12	D
2015	10	F
2020	5	B

We have,

- H's age is a prime number. The sum of the ages of D and B is equal to the age of H.
- Only four persons were born between B and A.

From the above conditions, there are two possibilities

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34		
1995	30		A
1998	27		
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- G is four years older than A.
- The sum of the ages of G and I is 61 years

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30		A
1998	27	G	I
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- The difference between the ages of E and F is a perfect square.
- E is 11 years younger than C.

From the above conditions, case-2 gets eliminated because E is 11 years younger than C, which is not satisfied. Hence, case-1 shows the final arrangement.

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30	C	A
1998	27	G	I
2002	23	A	E/F
2006	19	E	E/F
2008	17	H	H
2013	12	D	B
2015	10	F	E/F
2020	5	B	D

Answer: A

Q. 80

Study the following information carefully and answer the given questions.

Nine persons - A, B, C, D, E, F, G, H and I were born in different years i.e., 1991, 1995, 1998, 2002, 2006, 2008, 2013, 2015, 2020.

Note I: The age of each person is calculated with respect to the year 2025.

Note II: All the persons were born on the same date and same month.

Note III: The age of the person is only in years.

H's age is a prime number. The sum of the ages of D and B is equal to the age of H. Only four persons were born between B and A. G is four years older than A. The sum of the ages of G and I is 61 years. The difference between the age of E and F is a perfect square. E is 11 years younger than C.

Who among the following person was born eleven years after A?

A) H 

B) D 

C) C 

D) F 

E) G 

Explanation:**Final arrangement:**

Years	Age	Persons
1991	34	I
1995	30	C
1998	27	G
2002	23	A
2006	19	E
2008	17	H
2013	12	D
2015	10	F
2020	5	B

We have,

- H's age is a prime number. The sum of the ages of D and B is equal to the age of H.
- Only four persons were born between B and A.

From the above conditions, there are two possibilities

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34		
1995	30		A
1998	27		
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- G is four years older than A.
- The sum of the ages of G and I is 61 years

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30		A
1998	27	G	I
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- The difference between the ages of E and F is a perfect square.
- E is 11 years younger than C.

From the above conditions, case-2 gets eliminated because E is 11 years younger than C, which is not satisfied. Hence, case-1 shows the final arrangement.

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30	C	A
1998	27	G	I
2002	23	A	E/F
2006	19	E	E/F
2008	17	H	H
2013	12	D	B
2015	10	F	E/F
2020	5	B	D

Answer: B

Q. 81

Study the following information carefully and answer the given questions.

Nine persons - A, B, C, D, E, F, G, H and I were born in different years i.e., 1991, 1995, 1998, 2002, 2006, 2008, 2013, 2015, 2020.

Note I: The age of each person is calculated with respect to the year 2025.

Note II: All the persons were born on the same date and same month.

Note III: The age of the person is only in years.

H's age is a prime number. The sum of the ages of D and B is equal to the age of H. Only four persons were born between B and A. G is four years older than A. The sum of the ages of G and I is 61 years. The difference between the age of E and F is a perfect square. E is 11 years younger than C.

The one who was born three persons before H was born in which of the following year?

A) 1995 

B) 2008 

C) 1998 

D) 2013 

E) 2002 

Explanation:**Final arrangement:**

Years	Age	Persons
1991	34	I
1995	30	C
1998	27	G
2002	23	A
2006	19	E
2008	17	H
2013	12	D
2015	10	F
2020	5	B

We have,

- H's age is a prime number. The sum of the ages of D and B is equal to the age of H.
- Only four persons were born between B and A.

From the above conditions, there are two possibilities

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34		
1995	30		A
1998	27		
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- G is four years older than A.
- The sum of the ages of G and I is 61 years

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30		A
1998	27	G	I
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- The difference between the ages of E and F is a perfect square.
- E is 11 years younger than C.

From the above conditions, case-2 gets eliminated because E is 11 years younger than C, which is not satisfied. Hence, case-1 shows the final arrangement.

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30	C	A
1998	27	G	I
2002	23	A	E/F
2006	19	E	E/F
2008	17	H	H
2013	12	D	B
2015	10	F	E/F
2020	5	B	D

Answer: C

Q. 82

Study the following information carefully and answer the given questions.

Nine persons - A, B, C, D, E, F, G, H and I were born in different years i.e., 1991, 1995, 1998, 2002, 2006, 2008, 2013, 2015, 2020.

Note I: The age of each person is calculated with respect to the year 2025.

Note II: All the persons were born on the same date and same month.

Note III: The age of the person is only in years.

H's age is a prime number. The sum of the ages of D and B is equal to the age of H. Only four persons were born between B and A. G is four years older than A. The sum of the ages of G and I is 61 years. The difference between the age of E and F is a perfect square. E is 11 years younger than C.

If all the persons were born in alphabetical order from 1991, then what is the difference between the age of I before and after rearrangement?

A) 15 years 

B) 14 years 

C) 25 years 

D) 29 years 

E) 18 years 

Explanation:**Final arrangement:**

Years	Age	Persons
1991	34	I
1995	30	C
1998	27	G
2002	23	A
2006	19	E
2008	17	H
2013	12	D
2015	10	F
2020	5	B

We have,

- H's age is a prime number. The sum of the ages of D and B is equal to the age of H.
- Only four persons were born between B and A.

From the above conditions, there are two possibilities

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34		
1995	30		A
1998	27		
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- G is four years older than A.
- The sum of the ages of G and I is 61 years

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30		A
1998	27	G	I
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- The difference between the ages of E and F is a perfect square.
- E is 11 years younger than C.

From the above conditions, case-2 gets eliminated because E is 11 years younger than C, which is not satisfied. Hence, case-1 shows the final arrangement.

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30	C	A
1998	27	G	I
2002	23	A	E/F
2006	19	E	E/F
2008	17	H	H
2013	12	D	B
2015	10	F	E/F
2020	5	B	D

Answer: D

Q. 83

Study the following information carefully and answer the given questions.

Nine persons - A, B, C, D, E, F, G, H and I were born in different years i.e., 1991, 1995, 1998, 2002, 2006, 2008, 2013, 2015, 2020.

Note I: The age of each person is calculated with respect to the year 2025.

Note II: All the persons were born on the same date and same month.

Note III: The age of the person is only in years.

H's age is a prime number. The sum of the ages of D and B is equal to the age of H. Only four persons were born between B and A. G is four years older than A. The sum of the ages of G and I is 61 years. The difference between the age of E and F is a perfect square. E is 11 years younger than C.

Four of the following five are alike in a certain way and thus form a group as per the given arrangement. Which of the following does not belong to that group?

A) E 

B) B 

C) H 

D) G 

E) I 

Explanation:**Final arrangement:**

Years	Age	Persons
1991	34	I
1995	30	C
1998	27	G
2002	23	A
2006	19	E
2008	17	H
2013	12	D
2015	10	F
2020	5	B

We have,

- H's age is a prime number. The sum of the ages of D and B is equal to the age of H.
- Only four persons were born between B and A.

From the above conditions, there are two possibilities

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34		
1995	30		A
1998	27		
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- G is four years older than A.
- The sum of the ages of G and I is 61 years

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30		A
1998	27	G	I
2002	23	A	
2006	19		
2008	17	H	H
2013	12	D	B
2015	10		
2020	5	B	D

Again, we have,

- The difference between the ages of E and F is a perfect square.
- E is 11 years younger than C.

From the above conditions, case-2 gets eliminated because E is 11 years younger than C, which is not satisfied. Hence, case-1 shows the final arrangement.

Years	Age	Case-1	Case-2
		Persons	Persons
1991	34	I	G
1995	30	C	A
1998	27	G	I
2002	23	A	E/F
2006	19	E	E/F
2008	17	H	H
2013	12	D	B
2015	10	F	E/F
2020	5	B	D

Answer: E (All the persons were born in an even-numbered year except option E)

Q. 84

Study the following information carefully and answer the below questions.

Nine persons—A, B, C, D, E, F, G, H and I are sitting in a linear row and facing the north.

Not more than two persons sit to the left of B. As many persons sit to the right of B as to the left of C, who sits third to the right of E. A sits immediate to the left of F. One person sits between G and the one who sits immediate to the right of F. A doesn't sit at the extreme end. Five persons sit between D and I. D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

How many persons sit to the left of G?

A) As many persons to the right of D

B) None

C) As many persons sit to the right of the one who sits immediate left of F

D) Two

E) None of the above

Explanation:**Final arrangement:**

We have,

- Not more than two persons sit to the left of B.
- As many persons sit to the right of B as to the left of C, who sits third to the right of E.

From the above conditions, there are three possibilities.

Again, we have,

- A sits immediate to the left of F.
- A neither sits at the extreme end nor sits adjacent to B.
- One person sits between G and the one who sits immediate to the right of F.

Again, we have,

- Five persons sit between D and I.
- D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

From the above conditions, case-1 and case-2a get eliminated because D doesn't sit adjacent to H, which is not satisfied.

Hence, case 2 shows the final arrangement.

Answer: C

Q. 85

Study the following information carefully and answer the below questions.

Nine persons—A, B, C, D, E, F, G, H and I are sitting in a linear row and facing the north.

Not more than two persons sit to the left of B. As many persons sit to the right of B as to the left of C, who sits third to the right of E. A sits immediate to the left of F. One person sits between G and the one who sits immediate to the right of F. A doesn't sit at the extreme end. Five persons sit between D and I. D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

Who among the following person sits fourth to the right of H?A) B B) The one who sits immediate right of I C) The one who sits second from one of the ends D) D E) None of these 

Explanation:**Final arrangement:**

We have,

- Not more than two persons sit to the left of B.
- As many persons sit to the right of B as to the left of C, who sits third to the right of E.

From the above conditions, there are three possibilities.

Again, we have,

- A sits immediate to the left of F.
- A neither sits at the extreme end nor sits adjacent to B.
- One person sits between G and the one who sits immediate to the right of F.

Again, we have,

- Five persons sit between D and I.
- D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

From the above conditions, case-1 and case-2a get eliminated because D doesn't sit adjacent to H, which is not satisfied.

Hence, case 2 shows the final arrangement.

Answer: B

Q. 86

Study the following information carefully and answer the below questions.

Nine persons—A, B, C, D, E, F, G, H and I are sitting in a linear row and facing the north.

Not more than two persons sit to the left of B. As many persons sit to the right of B as to the left of C, who sits third to the right of E. A sits immediate to the left of F. One person sits between G and the one who sits immediate to the right of F. A doesn't sit at the extreme end. Five persons sit between D and I. D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

Four of the following five are alike in a certain way and thus form a group as per the given arrangement. Which of the following does not belong to that group?

A) A B) G C) E D) The one who sits immediate left of D E) The one who sits second to the right of F 

Explanation:**Final arrangement:**

We have,

- Not more than two persons sit to the left of B.
- As many persons sit to the right of B as to the left of C, who sits third to the right of E.

From the above conditions, there are three possibilities.

Again, we have,

- A sits immediate to the left of F.
- A neither sits at the extreme end nor sits adjacent to B.
- One person sits between G and the one who sits immediate to the right of F.

Again, we have,

- Five persons sit between D and I.
- D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

From the above conditions, case-1 and case-2a get eliminated because D doesn't sit adjacent to H, which is not satisfied.

Hence, case 2 shows the final arrangement.

Answer: D (All other persons are sitting in the middle of the row except option D)

Q. 87

Study the following information carefully and answer the below questions.

Nine persons—A, B, C, D, E, F, G, H and I are sitting in a linear row and facing the north.

Not more than two persons sit to the left of B. As many persons sit to the right of B as to the left of C, who sits third to the right of E. A sits immediate to the left of F. One person sits between G and the one who sits immediate to the right of F. A doesn't sit at the extreme end. Five persons sit between D and I. D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

What is the position of H with respect to E?A) Immediate left B) Third to the left C) Immediate right D) Second to the right E) Fourth to the left 

Explanation:**Final arrangement:**

We have,

- Not more than two persons sit to the left of B.
- As many persons sit to the right of B as to the left of C, who sits third to the right of E.

From the above conditions, there are three possibilities.

Again, we have,

- A sits immediate to the left of F.
- A neither sits at the extreme end nor sits adjacent to B.
- One person sits between G and the one who sits immediate to the right of F.

Again, we have,

- Five persons sit between D and I.
- D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

From the above conditions, case-1 and case-2a get eliminated because D doesn't sit adjacent to H, which is not satisfied.

Hence, case 2 shows the final arrangement.

Answer: A

Q. 88

Study the following information carefully and answer the below questions.

Nine persons—A, B, C, D, E, F, G, H and I are sitting in a linear row and facing the north.

Not more than two persons sit to the left of B. As many persons sit to the right of B as to the left of C, who sits third to the right of E. A sits immediate to the left of F. One person sits between G and the one who sits immediate to the right of F. A doesn't sit at the extreme end. Five persons sit between D and I. D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

Who among the following person sits between F and I?

I). A

II). The one who sits immediate left of D

III). G

A) Only I

B) Only I and II

C) None of the above

D) Only II and III

E) Only III

Explanation:**Final arrangement:**

We have,

- Not more than two persons sit to the left of B.
- As many persons sit to the right of B as to the left of C, who sits third to the right of E.

From the above conditions, there are three possibilities.

Again, we have,

- A sits immediate to the left of F.
- A neither sits at the extreme end nor sits adjacent to B.
- One person sits between G and the one who sits immediate to the right of F.

Again, we have,

- Five persons sit between D and I.
- D sits neither adjacent to H nor to the right of I, who doesn't sit at the extreme ends.

From the above conditions, case-1 and case-2a get eliminated because D doesn't sit adjacent to H, which is not satisfied.

Hence, case 2 shows the final arrangement.

Answer: E

Q. 89

Study the following statements and then decide which of the given conclusions logically follows from the given statements, disregarding the commonly known facts.

Statements:

Only a few docs are Files

Some files are saved.

No saved is deleted.

Conclusions:

I. No doc is Saved

II. Some files are not deleted.

A) Only conclusion I follows

B) Neither conclusion I nor II follows

C) Either conclusion I or II follows

D) Only conclusion II follows

E) Both conclusions I and II follow

Answer: D

Explanation:

I. No doc is Saved - Here, no direct relation between the doc and saved. So all the definite conclusions between them are not true. Hence, the conclusion doesn't follow.

II. Some files are not deleted - Here, Some files are saved whereas no save is deleted. So, some files are not deleted is the definite conclusion. Hence, the conclusion follows.

Q. 90

Study the following statements and then decide which of the given conclusions logically follows from the given statements, disregarding the commonly known facts.

Statements:

Only a few bowlers are spin

All spins are allrounder

No allrounder is out.

Conclusions:

I. No bowler is out

II. All spin being out is a possibility

A) Neither conclusion I nor II follows

B) Only conclusion I follows

C) Either conclusion I or II follows

D) Only conclusion II follows

E) Both conclusions I and II follow

Answer: A

Explanation:

I. No bowler is out- Here, there is no direct relation between bowler and out. So, all the definite conclusions between them are not true. Hence, the conclusion doesn't follow.

II. All spin being out is a possibility- Here, all spin is allrounder whereas no allrounder is out. So, all spin being out is not a possible conclusion. Hence, the conclusion doesn't follow.

Q. 91

Study the following statements and then decide which of the given conclusions logically follows from the given statements, disregarding the commonly known facts.

Statements:

Some laws are good

Only a few goods are obeyed.

All actions are laws.

Conclusions:

I. All action being obeyed is a possibility.

II. No law is obeyed.

A) Only conclusion II follows

B) Either conclusion I or II follows

C) Both conclusions I and II follow

D) Neither conclusion I nor II follows

E) Only conclusion I follows

Answer: E

Explanation:

I. All action being obeyed is a possibility.- Here, there is no direct relation between action and obeyed. So, all the possible conclusions between them are true. Hence, the conclusion follows.

II. No law is obeyed.- Here, there is no direct relation between laws and obeyed. So, all the definite conclusions between them are not true. Hence, the conclusion doesn't follow.

Q. 92	In the given questions, the relationship between different elements is shown in the statements followed by some conclusions. Find the conclusion which is definitely true. Statements: $P \geq A < C = O; L > A \leq M; C \geq N \leq Z$ Conclusions I. $P \geq M$ II. $O \leq Z$ A) Only conclusion I is true  B) Only conclusion II is true  C) Either conclusion I or II is true  D) Both conclusions I and II are true  E) Neither conclusion I nor II is true 
Explanation:	Answer: E $P \geq A < C = O; L > A \leq M; C \geq N \leq Z$ I. $P \geq M$ ($P \geq A \leq M$)->False II. $O \leq Z$ ($O = C \geq N \leq Z$)->False

Q. 93

In the given questions, the relationship between different elements is shown in the statements followed by some conclusions. Find the conclusion which is definitely true.

Statements:

$A \leq V < S = Z$; $T < O \leq I = Z$; $N < U < T$

Conclusions:

I. $U > Z$

II. $N < S$

A) Only conclusion I is true

B) Only conclusion II is true

C) Either conclusion I or II is true

D) Neither conclusion I nor II is true

E) Both conclusions I and II are true

Explanation:

Answer: B

$A \leq V < S = Z$; $T < O \leq I = Z$; $N < U < T$

I. $U > Z$ ($U < T < O \leq I = Z$) $\rightarrow$ False

II. $N < S$ ($N < U < T < O \leq I = Z = S$) $\rightarrow$ True

Q. 94

In the given questions, the relationship between different elements is shown in the statements followed by some conclusions. Find the conclusion which is definitely true.

Statement:

$A > X = Y \geq D = S; O \geq T = I; O \leq E = D$

Conclusions:

I. $X > T$

II. $T = X$

A) Only conclusion I is true

B) Only conclusion II is true

C) Either conclusion I or II is true

D) Neither conclusion I nor II is true

E) Both conclusions I and II are true

Explanation:

Answer: C

$A > X = Y \geq D = S; O \geq T = I; O \leq E = D$

I. $X > T$ ($X = Y \geq D = E \geq O \geq T$) $\rightarrow$ False

II. $T = X$ ($X = Y \geq D = E \geq O \geq T$) $\rightarrow$ False

By combining both the conclusions, we get a complementary pair. So, either conclusion I or II is true.

Q. 95

Study the following information carefully and answer the questions given below

If 1 is subtracted from an odd digit and 2 is added to an even digit of the number "5341267152", then which of the following digit repeated the maximum times after the arrangement?

A) 0 B) 6 C) 4 D) 8 E) 2 **Explanation:****Answer: C**

Given number: 5341267152

If 1 is subtracted from an odd digit= 4240266042

If 2 is added to an even digit=4260486044

4 is repeated the maximum times

Q. 96

Study the following information carefully and answer the questions given below

If we form a four-letter meaningful word by using the second, third, fifth, and eighth letters from the left end of the word "PROFITABLE", then what would be the fourth letter from the right end of that meaningful word, (Note: The formed word doesn't end with a vowel)? If no meaningful word is formed, mark the answer as @. If more than one meaningful word is formed, mark the answer as #.

A) O B) @ C) I D) R E) # **Explanation:****Answer: B**

Given word: P R O F I T A B L E.

The second, third, fifth and eighth letters: P R O F I T A B L E

Meaning full word using R, O, I, B: BROI (no meaningful word formed)

Q. 97

Study the following information carefully and answer the questions given below

How many such pairs of letters are there in the word "CHILDREN" each of which has as many letters between them in the word as there between them in the English alphabetical series (from both forward and backward directions)?

- A) None ☒
- B) Three ☒
- C) One ☒
- D) Two ☒
- E) Four ☒

Answer: E

Explanation:

Q. 98

Study the following information carefully and answer the given questions.

A man starts running towards north from point C for 8m to reach point D then he turns to the right and runs for 11m to reach point E. Then he turns towards the south and runs for 15m to reach point F, where he turns to the right and runs for 8m to reach point G. Point G is 9m south of Point H, which is 5m east of Point I.

In which of the following direction is point G with respect to point I?

A) South-west

B) North-east

C) North-west

D) South-east

E) South

Final arrangement:

Answer: D

Explanation:

Point G is to the south-east of point I.

Q. 99

Study the following information carefully and answer the given questions.

A man starts running towards north from point C for 8m to reach point D then he turns to the right and runs for 11m to reach point E. Then he turns towards the south and runs for 15m to reach point F, where he turns to the right and runs for 8m to reach point G. Point G is 9m south of Point H, which is 5m east of Point I.

What is the shortest distance between point H and point F?

A) $\sqrt{145}\text{m}$ ✓

B) $\sqrt{167}\text{m}$ ✗

C) $\sqrt{129}\text{m}$ ✗

D) $\sqrt{131}\text{m}$ ✗

E) $\sqrt{157}\text{m}$ ✗

Final arrangement:

Explanation:

Answer: A

The shortest distance between point E and point L = $\sqrt{HG^2 + GF^2} = \sqrt{9^2 + 8^2} = \sqrt{145}\text{m}$

Q. 100

Study the following information carefully and answer the given questions.

A man starts running towards north from point C for 8m to reach point D then he turns to the right and runs for 11m to reach point E. Then he turns towards the south and runs for 15m to reach point F, where he turns to the right and runs for 8m to reach point G. Point G is 9m south of Point H, which is 5m east of Point I.

Which of the following statement(s) is/are FALSE based on the final arrangement?**I. Point D is to the north-west of point F.****II. Point I is to the north of point E****III. As many points to the east of point H as to the west of point G.**

A) Only I

B) Only I and II

C) Only II

D) Only I and III

E) All I, II and III

Final arrangement:

Answer: C

Explanation:

I. Point D is to the north-west of point F.->True

II. Point I is to the north of point E->False

III. As many points to the east of point H as to the west of point G->True
